Now know ye that we, the said Governor in Executive Council, in exercise of the powers in us vested as aforesaid, do hereby appoint that the said Ordinance No. 4 of 1894, intituled 'An Ordinance to provide for the continuance of the Export Duty on Tea levied under Ordinance No. 15 of 1892,' shall cease to be in force as from and after the thirty-first day of December, 1908.

V.—ORDINANCE NO. 2, ASSENTED TO APRIL 3, 1907, TO AMEND 'THE INDIAN HEMP ORDINANCE, 1905.'

1. This ordinance may be cited as 'The Indian Hemp Ordinance, 1907,' and shall be construed and read as one with 'The Indian Hemp Ordinance, 1905,' hereinafter referred to as 'the principal Ordinance.'

2. For section 3 of the principal ordinance the following section shall be substituted:—

3. (1) Any person who within the Island of Ceylon shall plant, grow, cultivate, or permit to be planted, grown, or cultivated Indian hemp shall be guilty of an offence, and shall be liable on conviction thereof to a fine not exceeding one hundred rupees, or to imprisonment, simple or rigorous, not exceeding six months, or to both.

(2) Any person who shall import into Ceylon or sell or in any manner distribute or knowingly keep or have in his possession Indian hemp shall be guilty of an offence,

and shall be liable on conviction thereof to a fine not exceeding one hundred rupees, or to imprisonment, simple or rigorous, not exceeding six months, or to both. Provided that the provisions of this subsection shall not apply to any person duly licensed under section 3 of 'The Poisons Ordinance, 1901,' to sell or expose or offer for sale any poison.

3. Section 5 of the principal ordinance shall be amended by inserting the words 'other than a person licensed to sell poisons under "The Poisons Ordinance, 1901," between the words 'any person' and the words 'is in possession' in line 3 of the section.

4. From and after the passing of this ordinance it shall be lawful for any person licensed to sell or expose or offer for sale poisons under 'The Poisons Ordinance, 1901,' to import Indian hemp or any preparation of Indian hemp, and to possess and sell the same, subject to the regulations as to the possession and sale of poisons for the time being in force made under the provisions of sections 9 and 10 of the said 'Poisons Ordinance, 1901.'

MONTSERRAT.

AN ORDINANCE TO AMEND THE CUSTOMS TARIFF ORDINANCE, 1906.

(No. 9, Assented to December 22, 1906.)

Be it ordained by the Governor and Legislative Council of Montserrat as follows:

1. This ordinance may be cited for all purposes as 'The Customs Tariff Amendment Ordinance, 1906,' and shall be read as one with 'The Customs Tariff Ordinance, 1906.'

2. This ordinance shall come into operation on such day as the Governor shall appoint in that behalf by proclamation.

3. The figures '7/6' (seven shillings and six pence) appearing against the words 'four of wheat per barrel or bag not exceeding 196 pounds and other packages in like proportion' in schedule A of 'The Customs Tariff Ordinance, 1906,' are hereby repealed, and the figures '6/8' (six shillings and eight pence) substituted.

The figures ' $\frac{3}{4}$ ' (three farthings), appearing against the words 'soap, other than fancy or toilet, per pound,' in the said schedule A, are hereby repealed, and the figures ' $\frac{1}{2}$ ' (one-half penny) substituted.

The figure '9' (nine pence), appearing against the words 'tea per pound' in the said schedule A, are hereby repealed and the figure '6' (six pence) substituted.

The figures '1 1 $\frac{1}{2}$ ' (one shilling and one penny half penny), appearing against the words 'tobacco, viz.: leaf tobacco if imported in packages containing not less than 500 pounds per pound' in the said schedule A, are hereby repealed, and the figures '1 0' (one shilling) substituted.

The figures '3/9' (three shillings and nine pence), appearing against the words 'tobacco, manufactured tobacco including snuff per pound' in the said schedule A, are hereby repealed, and the figures '3/4' (three shillings and four pence) substituted.

The figures '15. 0. 0.' (fifteen pounds), appearing against the words 'all goods not hereinbefore specified and not exempted by "this ordinance or schedule B, per £100 *ad valorem*"' in the said schedule A, are hereby repealed, and the figures '13. 6. 8.' (thirteen pounds six shillings and eight pence) substituted.

Duly published and proclaimed, December 31, 1906.

ST. CHRISTOPHER-NEVIS.

AN ORDINANCE TO PROVIDE FOR THE PAYMENT OF CERTAIN DUTIES UPON SUGAR AND RUM.

(No. 7, Assented to November 1, 1906.)

Be it ordained by the Governor and Legislative Council of Saint Christopher and Nevis as follows:—

1. This ordinance may be cited for all purposes as ‘The Export Duty Ordinance, 1906.’

2. Ordinance No. 1 of 1898, entitled ‘An Ordinance to provide for the payment of certain duties upon sugar and rum,’ and Ordinance No. 1 of 1906, entitled ‘An Ordinance to provide for the payment of certain duties upon sugar and rum,’ are hereby repealed.

3. From and after the coming into operation of this ordinance the following duties shall be paid into the treasury for the use of the presidency in respect of all sugar and rum shipped or exported from the presidency:—

On every hogshead of sugar, not exceeding forty-two inches truss, the sum of four shillings and eight pence;

On every tierce of sugar not exceeding thirty inches truss, the sum of three shillings and two pence;

On every barrel of sugar, the sum of sixpence and a half-penny;

On every ton of sugar otherwise packed, the sum of four shillings and eightpence;

On every one hundred gallons of rum, the sum of three shillings and sixpence;

And a proportionate sum upon any greater or less quantity of sugar or rum, respectively.

4. All duties payable under this ordinance shall be paid by the shipper or exporter before or at the time of exportation.

5. If any person shall refuse or neglect to pay any duty imposed by this ordinance, such person shall be liable to a penalty not exceeding five pounds, in addition to the amount of such duty; and such duty and the penalty hereby imposed shall be recoverable upon complaint made by the treasurer or some person duly authorized by him on his behalf before any district magistrate.

6. This ordinance shall be deemed to have come into operation on January 1, 1906.

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Commercial Agents into any subject of general interest.

Canadian Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

The undermentioned Canadian agents will answer correspondence relative to trade requirements in the districts they represent.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent for New South Wales, Queensland and New Zealand.

D. H. Ross, Stock Exchange Building, Melbourne, agent for Victoria, South Australia, Western Australia and Tasmania.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

P. B. Ball, Room 39 and 40, Central House, Birmingham.

J. B. Jackson, cor. of E. Parade and Greek Streets, Leeds, agent for Leeds and Hull.

P. B. MacNamara, Canada Chambers, 36 Spring Gardens, Manchester.

W. A. MacKinnon, Sun Buildings, Clare Street, Bristol.

JAPAN.

Alex. MacLean, No. 14 Bund, Room B, Yokohama.

MEXICO.

A. W. Donly, Apartado, 91B, Mexico, D.F., Mexico.

NEWFOUNDLAND.

E. D. Arnaud, Gazette Building, Water Street, St. John's.

SOUTH AFRICA.

John A. Chesley, Rhodes Buildings, Cape Town, Cape Colony.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Poste Restante, Hong Kong.

CANADIAN COMMERCIAL AGENTS.

CHINA.

H. J. Craig, 18 Szechuen Road, Shanghai.

NORWAY.

C. E. Sontum, Grubbegd, No. 4, Christiania, Norway, agent for Sweden and Denmark also.

WEST INDIES.

E. A. H. Haggart, Kingston, Jamaica.

R. Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and the Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

CANADIAN HIGH COMMISSIONER'S OFFICE.

GREAT BRITAIN.

W. L. Griffith, Secretary, 17 Victoria Street, London, S.W., England.

Harrison Watson, Canadian representative, City Trade Branch, 73 Basinghall Street, London, E.C., England.

CANADIAN IMMIGRATION AGENTS.

BELGIUM.

D. Tréau De Cœli, 29 Rue de Souci, Antwerp.

FRANCE.

Paul Wiallard, 10 Rue de Rome, Paris.

GREAT BRITAIN.

J. Bruce Walker, Assistant Superintendent of Emigration, 11-12 Charing Cross, London, S.W.

A. F. Jury, Old Castle Buildings, Preeson's Row, Liverpool.

G. H. Mitchell, 43 Cannon Street, Birmingham.

H. N. Murray, Exeter.

L. Burnett, York.

John Webster, 35-37 St. Enoch Square, Glasgow.

John McLennan, Aberdeen.

E. O'Kelly, 17-19 Victoria Street, Belfast.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND
NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, AUSTRALIA, Sept. 3, 1907.

AUSTRALIAN TRADE.

The trade of Australia for 1905 and 1906 was:—

	1905.	1906.
Imports.	£38,346,731	£44,729,506
Exports.	56,841,035	69,737,763

These are the figures given in the returns, but in order to make the comparison correct, there should be added to the exports of 1906 £875,966, value of ships' stores supplied to ships trading to foreign countries which, in 1905, were included in the exports, but in the returns of last year were given separately. The expansion of exports is very striking, being double the expansion of imports, which increased 16 per cent.

The chief trade was with the following countries:—

	IMPORTS.		EXPORTS.	
	1905.	1906.	1905.	1906.
	£	£	£	£
United Kingdom	23,074,717	26,575,833	26,702,390	32,854,049
Canada	230,981	303,751	43,288	732,688
Cape Colony	11,105	8,762	1,752,944	1,179,830
Ceylon	693,616	643,906	3,893,436	3,648,645
India	1,311,427	1,703,606	2,935,094	3,520,499
New Zealand	2,333,516	3,156,489	1,595,368	2,391,767
Total British countries	28,458,867	33,311,697	39,221,709	46,704,961

	IMPORTS.		EXPORTS.	
	1905.	1906.	1905.	1906.
	£	£	£	£
Belgium	551,984	909,620	3,212,869	4,804,268
France	510,950	462,622	5,762,904	5,553,055
Germany	2,643,412	3,204,844	3,888,170	3,725,974
Japan	371,761	424,583	581,155	1,210,138
United States	4,486,604	4,633,553	1,049,773	4,338,701
Total foreign countries	8,887,864	11,417,867	17,619,326	23,032,802

THE CANADIAN TRADE.

The trade with Canada shows an increase of nearly £73,000, and an increase of exports of over £700,000. In my report of March 9 on the trade of New South Wales I explained that the very large increase of exports was due to the export of gold via the Canadian steamers to points in the United States, to meet the balance of trade in favour of that country as against Great Britain. The actual trade with Canada is no nearer to being ascertained in the statement of 1905 than in previous statements. The returns give the country of origin of the goods and in that statement make the imports from Canada £305,497, as against £303,751 in the general returns. Even this statement is very far out from the actual facts. Taking some of the leading items, the imports according to the Australian returns and the exports according to the Canadian returns were as follows:—

	Aus. Returns.	Can. Returns.
Bicycles and parts.	£12,763	£ 15,218
Agricultural machinery.	74,265	107,572
Machinery, other.	5,704	9,800
Paper.	63,402	68,833
Cotton fabrics.	12,199	19,950
Rubber goods.	5,766	18,810
Musical instruments.	2,611	5,845

Inasmuch as similar discrepancies existed in 1905, it is very clear that the Australian statistics are very much below the mark, though there would naturally be some differences owing to the different endings of the fiscal years of the two countries.

THE TREND OF AUSTRALIAN TRADE.

It may be of interest to know the variations in the importations of Australia in ten years. The total imports of Australia were:—

1896.	£29,658,197
1906.	44,729,506

These imports came mainly as follows from:—

	1896.	1906.
United Kingdom.	£20,252,561	£26,575,833
Canada.	113,790	303,751
Other British possessions.	3,070,739	6,432,113
Total, British countries.	£23,437,090	£33,311,697

Foreign countries:—

Belgium.	£ 285,728	£ 909,620
France.	350,063	462,622
Germany.	1,574,624	3,204,844
Sweden and Norway.	179,488	359,588
United States.	2,845,903	4,633,553
Total from all foreign countries	£ 6,221,107	£11,417,809

EXPORTS.

The principal exports for similar years were:—

	1896.	1906.
United Kingdom.	£21,630,820	£32,854,049
Canada.	- 11,565	732,688
Ceylon.	760,094	3,648,645
Cape Colony.	75,992	1,179,830
New Zealand.	856,191	2,391,767
Total British possessions.	2,861,751	13,850,912
Total British countries.	£24,492,571	£46,704,961
Belgium.	£ 1,322,369	£ 4,804,268
France.	2,425,328	5,553,055
Germany.	1,536,332	3,725,974
United States.	2,360,067	4,338,701
Total foreign countries.	8,470,951	23,032,802
Total exports.	£32,963,522	£70,613,729

These totals include the stores supplied to foreign bound ships.

The increase in the imports from the United Kingdom was greater than that from all foreign countries. By percentage the increase from foreign countries is very much greater and that from the British colonies is nearly three-fold the percentage of the increase from the United Kingdom. The statistics do not accurately convey the trade of other countries as well as that of Canada. The imports from Belgium include imports from France via Antwerp and those from the United States include imports, as have been shown, from Canada. The importations from Canada are certainly double of those shown in the above statement and though they are not what they should be, yet under the circumstances in Canada the increase in trade in ten years has been fair. The remarkable feature in this statement is the increase in the exports, having nearly doubled in ten years, and the great increases have been to the British possessions and to foreign countries. The increases in the exports to foreign countries have been greater than the increases to the United Kingdom and, it will be evident, have been very large to other countries than those named in the statement given. The exports to Belgium, France and Germany have been proportionately large, but those to a number of other countries have been still greater. As for examples, the exports to British colonies, India, Straits Settlement and Natal have been proportionately even greater than those shown in the countries given. The trade to Japan, the Philippine Islands, and the islands of the Pacific has shown marked increases indicating the attention that has been paid in Australia to the trade in the far east and the results that have followed from it.

APPAREL AND TEXTILES.

The importations under this head have shown an increase in every branch of the trade. The importations from Canada were £21,150 in 1905 as against £24,831 last year, a fair increase in percentage. If the Canadian mills were able to supply a larger quantity of piece goods, the market would have taken them.

ARMS AND AMMUNITIONS.

The importations from Canada are practically limited to one size of cartridges. Last year showed a slight increase in the importations from Canada over the previous year, being £1,640 as against £1,253 in 1905, proportionately, a larger increase than from other countries. The total amount imported last year was £146,647 of which the United Kingdom supplied £65,289, the United States £76,300, Canada, Belgium and Germany fairly dividing the balance between them. Cartridges for the army and navy were not included in these figures. They came wholly from the United Kingdom as did the most of the cartridge cases and the percussion caps.

BLACKING.

The importations totaled £63,861 of which the United Kingdom is credited with £48,044; the United States £11,285, Germany £3,136 and Canada but £11. However, in the country of origin the amount imported from Canada is stated at £326, which falls below the true figures as a very promising trade has sprung up in this article, though Canada has yet obtained but a small proportion of the total imports.

BOOKS AND PERIODICALS.

The importations in 1906 were but very slightly above those of the previous year, the changes being a decline in the importations from the United Kingdom and Germany and an increase of nearly £8,000 from the United States. The importations from Canada are very small, being £210 as against £233 of the previous year.

BOOTS AND SHOES.

The trade in boots and shoes, which since the adoption of the Federal tariff, steadily declined until last year there were less than half the importations for 1901; this year has shown a slight improvement. The Canadian portion of it shows very little improvement except in the item of gum boots, which went up to £552 as against £153 in 1905. Canada is not entitled to the credit of the boots and shoes which the Australian returns place as coming from it. They originated in the United States, largely in Detroit and were shipped to this country via Windsor. Rubber shoes show an increase in the importations of £10,000. According to the general returns, the trade from Canada declined from £2,781 to £2,319. In the column of the 'Country of Origin,' however, the importations are more correctly stated at £4,369, being a very considerable increase over the figures of the previous year. Even at the latter figures, Canada is not doing one-tenth of the trade, the principal business being done with the United Kingdom which shows a very considerable increase over the figures of the previous year.

BRUSHWARE.

The importations of brushes and brushware were £145,748 as against £122,851 of the previous year. Three-fourths of the amount came from Great Britain, France supplying £14,000, and Germany £7,000. The United States' share of the trade is only about £5,000; Canada has scarcely made a beginning, the amount credited to it being £13.

CANDLES.

In the importations into New Zealand of candles to the amount of £48,357 Canada sent £2,143. The importations of candles into Australia last year were £36,997, none of which are set down as coming from Canada. The trade with New Zealand was due to the preferential tariff in favour of Canada, and the difference in the trade of the two countries illustrates the value of even a small preferential tariff.

CANVAS.

A like statement can be made respecting canvas as was made respecting candles. Canada is credited with nearly one-tenth of the importations into New Zealand but of

£244,662 which came into Australia last year as in the previous year, none of it is said to have come from Canada. It is probable, however, that a portion of the imports from the United States originated in Canada as one of the Canadian mills has always exported through a New York firm. The imports from the United States were small being only £3,445 as against £114,710 coming from Great Britain, and £125,942 from India. The importations from Great Britain increased by nearly 50 per cent last year.

CHEESE.

The importations last year amounted to £11,553. The Canadian share of the trade was £583, as against £337 of the previous year. The bulk of the importations were from the United Kingdom, New Zealand, Germany and the Netherlands. The only cheese imported from Canada is a potted cheese, exceedingly difficult of transportation in good order in a hot climate without the use of special preservatives, which are practically prohibited in Australia. In New Zealand similar cheese has been made which has entered the market here in lieu of the Canadian article. The short distance which it has to be carried gives it considerable advantage in the competition.

CONFECTIONERY.

The total imports show an advance of £116,305, as against £99,490 of the previous year. Of this increase Great Britain took over £11,000 and the United States nearly £4,500; the share of other countries, Canada included, being very small.

FISH.

The importations of fish preserved in tins increased from £288,371 in 1905 to £310,656 last year, but the importations from Canada fell from £51,779 to £38,256. The importations from the United States also showed some decrease, but not quite equal to that from Canada. Those from Great Britain increased from £94,134 to £119,120, and Germany, Norway and Portugal secured the balance of the advance. Fresh fish to the value of £510 was imported from Canada, but New Zealand, from its proximity, sent £12,514, and the United Kingdom nearly three times as much as Canada. The difficulty in the importations of fresh fish from Canada is the inability of the Canadian-Australian line of steamers to carry small parcels, as the refrigerated spaces devoted to ships' stores are not large enough to enable the steamers to take such cargoes, and it is not profitable to refrigerate the large spaces for the quantity of this freight offered.

APPLES.

Apples to the value of £4,990 were credited as coming from Canada last year, as against £719 the previous year. Almost every bushel of this quantity came from the United States. Though the shipment of apples from British Columbia would realize a better price when sent to Australia than they command at home, no firm apparently cares to enter the trade. The apples sent from the State of Washington arrived in perfect condition, and were free from disease or blemish. They would net the owner about \$2.50 at Vancouver, and the trade is so promising that the same exporter proposes to continue the business this year, sending a large proportion of his crop to this point as the most profitable market available.

FURNITURE.

The furniture imported in 1906 was valued at £212,526, as against £219,003 in 1905. In the 'Country of Origin' the amount credited to Canada is £8,163, which is double the amount so credited in 1905. This is still short of the actual trade, which is growing and likely to be made much larger as the Canadian factories increase their

equipment. But if the new tariff, or anything approaching to it, on chairs is supported by parliament, a large portion of this trade will be destroyed. Notwithstanding the duties, the improved times have sustained the importations. The following figures will give the imports from the principal suppliers for the years 1903, 1905 and 1906:—

	1903.	1905.	1906.
	£	£	£
United Kingdom.....	69,020	83,131	75,975
Canada.....	1,735	1,870	2,538
Austria.....	3,683	2,269	1,875
Belgium.....	1,923	1,585	1,644
Germany.....	31,185	51,101	60,357
United States.....	42,993	57,843	44,333

GRAIN.

In spite of the high duties, there was imported last year £34,468 of barley which according to the 'Country of Origin' the following supplied the chief amounts:—

Canada.....	£ 1,601
New Zealand.....	7,016
United States.....	25,733

When the Northwest of Canada grows heavy two rowed barley, there will no doubt be an extension of this trade. The importation of oats for feed amounted to £27,445; New Zealand furnishing nearly the whole of it; Canada a little to the amount of £66. Owing to the poor harvest of New Zealand this year, Canada is shipping oats to that Dominion, and if Australia should have a dry season it is likely that at the end of the year, a demand may be made upon Canada for supplies to meet the Australian requirements. A small quantity of wheat for seed was obtained from Canada. I have more than once called attention to a demand for clean seed wheat from Manitoba and the great difficulty there was of having the requirements met. The market would take many more times the amount than has hitherto been sent for this purpose.

FLOUR AND MEAL.

The total importations of flour amounted to £8,844, which is slightly below the importations of the previous year. It nearly all came from Canada and the United States, Canada supplying £5,019 and the United States £3,337. The probability is that the whole of the United States' supply was ground from Manitoba wheat. Canada is credited with supplying oatmeal to the value of £1,365 and the United States £6,495. The imports came practically from one firm having mills in both Canada and the United States. It is probable that if the Canadian harvest should be a good one, the Canadian proportion sent will be increased.

HOPS.

The importations last year were £60,897, as in previous years, the United Kingdom, New Zealand, Germany and the United States furnishing nearly all the supplies. Canada is credited with £797. More was shipped from Canada but the exports were the product of the United States.

AGRICULTURE IMPLEMENTS AND MACHINERY.

The importation of agricultural implements for 1905 amounted to £361,439 and last year £282,520. This is rather less than half of the importations of 1904. The quantity originating in Canada is credited as £21,525 of harvesters, £7,100 of reapers and binders, and £45,640 of ploughs, drills, &c. As stated in the previous paragraphs of this report, this is very considerably below the actual amount which originated in Canada. Canada is doing a very fair proportion of the trade as there are some lines in implements, particularly, which are not manufactured in Canada at all and which are very largely supplied by the United States.

INDIA RUBBER.

In this item of the Australian returns, boots and shoes are not included. Owing to the growth of the motor trade there has been a very rapid increase in the importations in rubber tyres and other goods, the total importations in 1906 having been £314,854. Of this amount the United Kingdom supplied £274,805, being an advance of £50,000 on the importations of the previous year. Germany increased its proportion of the trade; the United States lost to Great Britain and Germany. The Canadian proportion is small being only £862. The principal Canadian trade in rubber goods is in boots and shoes which have been already referred to.

CABINET ORGANS.

The importation of 1906 were in value £14,881, a slight advance upon the imports of 1905. The returns illustrate trade routes. According to the two columns, one giving the 'General entry' and the other the 'Country of origin,' the imports were as follows:—

	General entry.	Country of origin.
United Kingdom.. . . .	£6,859	£ 259
Canada.. . . .	331	346
New Zealand.. . . .	18
Japan.. . . .	35	35
Germany.. . . .	227	239
United States.. . . .	7,411	14,002

A large proportion of the shipments from the United States evidently came by the way of England and it is likely also that Canadian organs also arrived here via England. The Australian returns credit Canada with sending 29 organs but the Canadian returns show an exportation from Canada to Australia of 114. The trade is almost stationary. Should the duties of the new tariff be continued upon pianos, it will no doubt seriously affect the importation of the cheap piano from Germany and may lead to an extension of the trade in cabinet organs.

PIANOS.

The total importations amounted to £241,357, Germany supplying £196,090 and the United Kingdom £35,161. Canada is credited with £2,115 last year as against £1,046 for 1905, but this is below the Canadian return of exports of these instruments.

LEATHER.

The total importations for 1906 were £380,788, Great Britain supplying £243,000 and the United States £78,335. The returns under the 'Country of origin,' however, make a very great variation of which it credits the United Kingdom with sending but £72,299 and the United States with £211,812. Canada's share in the trade was about £135 according to the returns. Latterly, there has been a promising development of the trade both in sole and upper leathers. It is anticipated that the trade will grow to one of considerable extent. There seems to be no reason why Canada should not share in the large trade that is done from the United States.

LEATHER MANUFACTURES.

The importation of leather manufactures was almost of the same value in 1906 as in 1905, being £109,980 last year as against £109,197 the previous year. The bulk of the supplies in both years came from Great Britain, being about £95,000 in each year. The United States came next with £8,538, being a little less than the imports from that country for the year before. The imports from Germany were £8,385, three times the amount of the previous year. The imports from Canada consist of whips valued at £253 as against £116 of the previous year.

MACHINES AND MACHINERY.

The importations under this item, covering a very large variety of goods, showed a very considerable increase in 1906 being £2,118,352 as against £1,735,859 in 1905. Great Britain still dominates the market with the United States second. In some items the United States has gained very considerably in the trade. These are in cream separators, gas and oil engines, portable engines, printing machinery, sewing machines, typewriters, and weighing machines. In electrical and mining machinery the importations from that country have decreased. Canada's contributions are:—

Gas and oil engines.. . . .	£ 642
Other engines.. . . .	38
Boilers and pumps.. . . .	1,509
Printing machinery.. . . .	3,511
Sewing machines.. . . .	53
Typewriters.. . . .	1,584
Machine tools.. . . .	197

which is a decrease of £1,747 as compared with last year.

METAL MANUFACTURES.

Importations have increased in nearly all the branches of this department, specially in wire netting, of which the importations amounted to £521,788, the United Kingdom, Germany and Belgium furnishing nearly all the supplies. Canada's contribution to no item was of any great importance, the whole amount being £1,860, but somewhat better than in 1905, when the importations were £1,376.

PRINTING PAPER.

In uncoated printing paper the imports for 1905 and 1906 were:—

1905.. . . .	£475,230
1906.. . . .	437,573

The chief importations according to the 'Country of origin' for the two years were:—

	1905.	1906.
United Kingdom.. . . .	£129,084	£124,188
Canada.. . . .	86,111	62,060
Austria.. . . .	542	642
Belgium.. . . .	1,546	702
Germany.. . . .	56,285	51,468
Netherlands.. . . .	92	418
Norway.. . . .	2,552	3,413
Sweden.. . . .	4,399	2,682
United States.. . . .	194,588	191,864

The figures relating to Canada do not agree with the Canadian export returns which, it is believed, are short of the amount shipped to this country. The Canadian share of the trade is increasing and this year promises to be larger than in any previous year.

PAPER HANGINGS.

The importations show a slight increase, being £42,251 in 1905, and £44,942 last year. The share credited to Canada was £797, as against £1,057 in 1905. The proportion to the United States is £2,227 as against £1,365. As these figures are below the Canadian export returns, the increase credited to the United States is evidently wall paper of Canadian origin. The United Kingdom increased its proportion of the trade, while Germany, the only other country supplying any quantity, decreased slightly.

DRESSED TIMBER.

Despite the tariff, there was an increase in the importations of dressed timber, being £264,843 in 1905, as against £311,358 in 1906. The share of Canada in either year was very small. The bulk of the trade, as in previous years, came from Norway, which sent to this country in linings and shelvings, timber, to the value of £226,098. Sweden and the United States sent, respectively, £14,783 and £23,221. No effort has been made for some time to get Canadian spruce into the market.

UNDRESSED OREGON.

The prosperity of the country and the increase in building, especially in the cities, are reflected by the increased importations of timber. Undressed Oregon imports were as follows:—

1905..	£417,527
1906..	631,559

The Canadian proportion, on the other hand, showed a marked relapse, being:—

1905..	£50,329
1906..	31,540

Canadian mills for many months were unable to execute any orders sent to them. The great increase in the trade fell to the United States. The feature of the timber market last year was the entrance of Japan into the trade. It is credited with 'logs not sawn,' to the amount of £4,552. A company with some capital has been formed in Sydney and Melbourne to pursue the importation of these logs. The timber is inferior to Oregon and other timber obtained from North America, but it will suit certain classes of the trade, and the importations this year are likely to be considerably increased.

VEHICLES—BICYCLES.

There is an improvement in the bicycle trade, the imports being £118,095 in 1905 as against £153,805 in 1906. The Canadian trade was £9,400 in 1905 and £12,763 last year. While these figures are below what once was an important item in the Canadian trade, yet it is a gratifying improvement. The United Kingdom absorbed most of the improvements in the trade: Germany and France doing somewhat better but the United States remained stationary.

MOTOR CARS.

An improvement is shown in the importation of motor cars having been £122,589 in 1905 and £163,005 in 1906. The principal imports were from:—

United Kingdom..	£95,223
France..	46,627
Germany..	9,161
United States..	7,776

Canada for the first time appears with the value of £1,116. These cars, where used, have been well spoken of. Preference is increasing for British built cars, for while the imports from Germany and France showed some small increase, yet the trade from Great Britain absorbed nearly all the increased imports. The United States' trade fell from £14,597 in 1905 to £7,776 in 1906. The verdict is that the United States' cars while suited to city streets and good roads will not stand usage in the country districts or outside of the city streets.

A brief summary of the imports from Canada last year has been given but until the tariff is fixed it would be useless to say much of the prospects of the future. The tariff will, probably, be higher than that in force last year and will affect some lines of industries, but not greatly the trade as a whole. Australia will be compelled to import the chief lines, which she now receives.

J. S. LARKE.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(*Mr. D. H. Ross.*)

STOCK EXCHANGE BUILDING,

MELBOURNE, September 2, 1907.

THE 1907 COMMONWEALTH CUSTOMS TARIFF.

Late on August 8, the proposed new Australian tariff was introduced into the Commonwealth parliament, and the new duties came into operation the following day. The Department of Trade and Commerce, Ottawa, was promptly notified by cable of the principal increases in the duties in so far as they affected leading lines of Canadian exports to Australia. The tariff has been under parliamentary debate for about 10 days, but so far the review of the items has not been commenced. There are 444 items which—in many instances—are subdivided under half a dozen or more headings. Ales, wines, spirits and tobaccos are responsible for 26 items, and free goods—unimportant to Canada—comprise a fair number of items. It is anticipated that it will take at least two to three months before the tariff will be finally settled.

CANADIAN GOVERNMENT'S APPLICATION FOR SUSPENSION OF DUTIES.

Strong representations were made by the Canadian government in requesting the Australian government to suspend the operation of the new duties until such time as the goods in transit—when the new tariff was introduced—could be admitted under the old rates. Practically the same request was made by the British government in regard to goods in transit from the United Kingdom, but, in both cases, the consideration asked for was refused. The Acting Prime Minister of the Commonwealth gave as his reason for declining the requests made by the British and Canadian governments, that it was contrary to the precedent established by the Australian colonies prior to federation and followed when the first Commonwealth tariff came into operation.

HIGHER CUSTOMS DUTIES.

Duties in the proposed Australian tariff now in operation—are in many cases doubled in comparison with previous rates. The schedule has many items varying from 30 to 45 per cent, and these duties are really higher than superficially expressed for the reason that the 10 per cent is added to the invoiced value of the goods before the duty is computed thereon. Thus the Australian tariff rate of 5 per cent becomes $5\frac{1}{2}$ per cent net, $7\frac{1}{2}$ per cent becomes $8\frac{1}{2}$ per cent, 10 per cent becomes 11 per cent, $12\frac{1}{2}$ per cent becomes $13\frac{3}{4}$ per cent, 15 per cent becomes $16\frac{1}{2}$ per cent, $17\frac{1}{2}$ per cent becomes $19\frac{1}{4}$ per cent, 20 per cent becomes 22 per cent, 25 per cent becomes $27\frac{1}{2}$ per cent, $27\frac{1}{2}$ per cent becomes $30\frac{1}{4}$ per cent, 30 per cent becomes 33 per cent, 35 per cent becomes $38\frac{1}{2}$ per cent, 40 per cent becomes 44 per cent, 45 per cent becomes $49\frac{1}{2}$ per cent, 50 per cent becomes 55 per cent net.

INCIDENCE OF THE TARIFF ON CANADIAN GOODS.

It is a remarkable fact that the duties proposed under the new customs tariff—and in the meantime in operation—are particularly heavy upon the principal lines of Canadian exports to Australia. The following examples may be quoted:—

	General Tariff.	Preferential Tariff U.K. Goods.
Apparel and attire—wool or silk.	45 per cent.	40 per cent.
" n.e.i.	40 "	35 "
" sundries.	30 "	25 "
Fish—in tins.	$1\frac{1}{2}$ d. per lb.	$1\frac{1}{2}$ d. per lb.
Denims—striped and fancy.	35 per cent.	30 per cent.
Denims and Dungaree, n.e.i.	10 "	5 "
Cotton piece goods, n.e.i.	10 "	5 "
Furniture.	40 "	30 "
Chairs (at rate giving higher duty).	7s. 6d. each or 30 per cent.	7s. 6d. each or 30 per cent.
Wood articles—doors, screens, &c.	40 "	30 "
Boots, shoes, slippers, &c.	35 "	30 "
Goloshes, I. R. sand-shoes, &c.	25 "	20 "
Gum and wading boots.	5 "	Free.
Rubber and other hose.	25 "	20 per cent.
Leather, n.e.i.	30 "	20 "
Paper 'news'.	10 "	Free.
Paper 'wall'.	20 "	15 per cent.
Pulp (for paper).	5 "	Free.
Bicycles, &c. (at higher duty).	£5 5s. 0d. or 30 per cent.	£5 0s. 0d. or 25 per cent.
Motor cars.	35 "	25 "

PROPOSED DUTY ON AGRICULTURAL IMPLEMENTS AND MACHINERY.

With the exception of cream separators and a few minor articles the proposed Australian customs duty on agricultural implements and machines only shows an advance in one or two lines. Later on when iron and steel are proclaimed dutiable, it is the intention to increase the duties by about $2\frac{1}{2}$ per cent. The new tariff rates—in comparison with the old and rates to be proclaimed—are as follows:—

Implements.	Old Tariff Rates.	1907 Tariff Rates.	Rate when Iron and Steel have been proclaimed dutiable.
Reapers and binders.....	Free.	Free.
Duty of 17½ per cent proposed on reapers and binders, reapers and mowers to come into operation on dates to be fixed by proclamation.....
Stripper harvesters.....	£12	£16.	£16 Os. 10d.
Harvester parts (per lb.).....	1¼d.	2¼d.	2½d.
Mowers.....	Free.	Free.
Drills.....	25 per cent.	25 per cent.	27½ per cent.
Cultivators (discs).....	25 "	25 "	27½ "
Cultivators (other).....	20 "	20 "	22½ "
Harrows.....	20 "	20 "	22½ "
Scufflers.....	20 "	20 "	22½ "
Ploughs (Stump Jump).....	25 "	25 "	27½ "
Ploughs (other).....	20 "	20 "	22½ "
Land rollers.....	12½ "	20 "	22½ "
Pulpers.....	Free.	10 "
Hay tedders.....	Free.	10 "
Discs for ploughs and harrows.....	Free.	25 "	27½ "
Swingle tress and neckyokes (when imported separately)...	20 per cent.	25 "	27½ "
Poles for reapers and binders.....	Free.	25 "	27½ "
Poles for cultivators (when imported separately).....	20 per cent.	25 "	27½ "
Bolts and nuts.....	12½ "	30 "	32½ "

PROPOSED DUTY ON VEHICLES NOW IN OPERATION.

The higher rates of Australian customs duties embodied in the new tariff upon buggies and similar vehicles will if finally passed practically prohibit the importation of such goods in a finished condition. Several Canadian manufacturers had a fairly large trade established throughout these states which will be seriously affected if the increased duties are agreed upon by the Federal parliament. It will be understood that the duties given below are subject to modification:—

	General Tariff.	Preferential Tariff U. K. Goods.
(A) Boston Chaises, Dog Carts, Gigs, Tilburys, and other two-wheeled Vehicles on springs or thorough braces.....each.	£6 12s.	£6
(B) Buggies, four wheeled.....	} without tops, mounted on springs or thorough braces.....each.	£9
Wagons, for carrying goods.....		
Wagons, single or double-seated.....		
Wagons, Express.....	} with tops.....each.	£12
(C) Hansom Cabs.....		
Single and double-seated wagons.....		
Wagonettes.....	} with tops.....each.	£25
Four-wheeled buggies.....		
(D) Omnibuses and coaches for carrying mails or passengers.....each.	£27 10s.	£25
(E) Barouches.....	}each.	£40
Broughams.....		
Drags.....		
Landaus.....		
Mail Phaetons.....		
Victorias.....	£44	£40
(F) All Carts and Wagons (without springs) and Spring Carts and Spring Drays, with two wheels.....ad val.	30 per cent.	20 per cent.
(G) All Carriages or Conveyances, n.e.i., Hand Trucks and parts, n.e.i., of Vehicles, including Axles and Springs when imported separately.....ad val.	35 per cent.	20 per cent.
(H) Parts of Carriages—		
(a) Sets of Wheels (unbored and untyred).....per set.	33s.	30s.
(b) Sets of Wheels (bored and tyred).....per set.	49s. 6d.	45s.
(c) Under Gear (including Axles, Springs, and Arms).....per set.	66s.	60s.
(d) Buggy hoods.....each.	49s. 6d.	45s.
(e) Carriage Bodies, in the white.....each.	88s.	80s.

INCREASED DUTY ON LUMBER, &C.

The duties on lumber have been considerably increased and, although now in operation, are subject to modification before they are finally passed. There is no preference given to the United Kingdom on lumber, although in some minor articles of wood there is a preference of about 10 per cent. The proposed rates are as follows:—

	General Tariff.	Preferential Tariff, U. K. Goods
(A) Timber, undressed, n.e.i., in sizes of 12 in. x 6 in. (or its equivalent) and over..... per 100 super. feet*	1s. 6d.	
(B) Timber, undressed, n.e.i., in sizes of 7 in. x 2½ in. (or its equivalent) and upwards, and less than 12 in. x 6 in. (or its equivalent). per 100 super. feet*	2s.	
(C) Timber, undressed, n.e.i., in sizes less than 7 in. x 2½ in. (or its equivalent); including door stocks. per 100 super. feet*	2s. 6d.	
(D) Timber, dressed, n.e.i. per 100 super. feet*	3s.	
(E) Architraves, mouldings and skirtings, of any material. per 100	5s.	
(F) Shingles..... per 1,000	3s.	
(G) Pickets, undressed..... per 100	2s. 6d.	
(H) Pickets, dressed..... per 100	6s.	
(I) Laths..... per 1,000	7s. 6d.	
(J) Laths for blinds..... ad val.	25 per cent.	
(K) Spokes, dressed or prepared (not being of hickory), 2 inches or under in diameter. per 100	10s.	
(L) Palings..... per 1,000	15s.	
(M) Prepared hubs (not of elm). each	1s.	
(N) Rims, n.e.i. each	1s. 3d.	
(O) Staves, dressed or partly dressed, but not shaped..... per 100	2s. 6d.	
(P) Three-ply veneer..... per 100 super. feet*	3s.	
(Q) Veneers, n.e.i.	Free.	
(R) Timber, for making boxes or doors, being cut into shape, and dressed or partly dressed..... per 100 feet super. facet	2s. 6d.	
(S) Picture and room mouldings..... ad val.	20 per cent.	
(T) Broom stocks..... ad val.	20 per cent.	
(U) Timber, bent or cut into shape, dressed or partly dressed, n.e.i. ad val.	30 per cent.	

Carriage woodware such as hickory, spokes, elm hubs, &c., are duty free.

CANADIAN RECIPROCAL TRADE WITH AUSTRALIA.

The preliminary proposals made on behalf of the Canadian government for a reciprocal trade agreement with the Australian government were submitted to the Acting Prime Minister of the Commonwealth on August 29 with a request that the negotiations should be entered upon at the earliest opportunity. The Department of Trade and Commerce, Ottawa, will be advised by cable in regard to the adjustment of the Australian tariff and the progress made towards a preferential trade agreement being arranged between the two countries.

AUSTRALIAN PREFERENCE TO UNITED KINGDOM.

The schedule under which is enumerated the lines of goods and products to which an Australian preferential tariff is proposed to be extended to the United Kingdom is rather limited in extent and in value of preference. It is by no means so comprehensive as the preferential rates granted by Canada upon the goods and products of Great Britain.

AUSTRALIAN TRADE CONDITIONS.

The introduction of the new tariff caused an immediate increase of prices on all lines of merchandise affected by higher duties. Bonded stores throughout the Com-

monwealth are having their capacity taxed to accommodate heavy arrivals of goods upon which a reduction of duties is—to some extent—anticipated. Business is naturally disturbed by the charges in the tariff as importers are so uncertain what the final settlement of duties will be. Duties on packages are now calculated at the same rate as the goods they contain. Under the most favourable circumstances it will be some months before trade assumes a normal condition. The spring is opening well and the outlook for the pastoral, farming and dairy industries is decidedly favourable throughout the Commonwealth.

CANADIAN MANUFACTURERS AND EXPORTERS CRITICISED.

As a result of several recent interviews with Melbourne importers of Canadian goods, I regret to report just grounds for the revival of the old complaint that manufacturers and exporters in the Dominion—some in a large way of business—are not extending due consideration to correspondence and orders received from distant Australia. One importer contrasted the replies received from United States and Canadian manufacturers when approached for information as to the lines they have to export. The former almost invariably sends catalogues and export (f.o.b.) prices of the goods he has to sell, whilst the Canadian frequently asks for further particulars of the inquirer's wants. This latter course is not appreciated for the following reasons:—

(a) It is well known that both United States and Canadian manufacturers look upon export trade as an outlet for their surplus production of lines for which they already have a home market. If other sizes or descriptions are asked for, either high prices are demanded, or such a minimum quantity stipulated that business is frequently impracticable.

(b) The delay in obtaining definite information on which orders could be placed. Frequently a firm desires information in order to make up indent for seasonable goods, and write say nine months before the goods are wanted here. The reply asking for further particulars reaches him in say three months, and another two or three months must elapse before the second reply with prices reaches Australia. Thus only four months are left for the ordering, manufacturing and delivery here, which would rarely suffice to bring the goods in time for the season.

SLOW DELIVERIES OF CANADIAN GOODS.

The very slow delivery of orders placed with Canadian manufacturers is operating seriously against the development of trade with Australia. I am aware of orders having been sent from Melbourne to Canada in June, 1906, and no advices have yet been received that the goods are shipped. There are numbers of instances of indents accepted by manufacturers 9 to 10 months ago that were not, at latest advices, executed. Australian buyers may be obliged to accept delivery when the goods arrive, but they decline to send repeat orders on account of the uncertainty of delivery.

CANCELLATION OF INDENTS FOR CANADIAN GOODS.

Several instances have been brought under my notice of Canadian manufacturers repudiating business contracts, obviously on account of an increase in demand and higher rates ruling elsewhere. Upon the basis of their own quotations some manufacturers notified Australian importers of their acceptance of orders, and the buyers, after anticipating the arrival of the goods from month to month, simply received a notification that the orders could not be filled at the prices upon which the orders were in the first instance accepted. Such treatment is most reprehensible as it reflects upon the good name of all Canadian exporters, who are endeavouring to secure a larger share of the Australian trade.

D. H. ROSS.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, September 28, 1907.

HERRING FISHERY.

The Colonial government has just announced its intention of removing all restrictions in regard to the purchase of herring on the west coast during the coming season, and pending a settlement by the Hague court of arbitration of the matters in dispute between Newfoundland and the United States in regard to the future conduct of this fishery.

It is very desirable that Canadians interested in this trade should take full advantage of the opportunity that will be at their disposal this season to capture as large a share of it as possible in free competition with the Americans, who in former years have almost had a monopoly of this business. Last year as was shown by the statistics that were published after the close of this fishery, Canadians succeeded in obtaining a considerable amount of this trade, which no doubt was a mutually satisfactory one to themselves, as well as to the fishermen from who they obtained their supplies, and it is hoped that this year will see a still larger share fall into their hands. Where the conditions are equally favourable it is pretty well understood that the fishermen prefer to sell their catch to Canadians rather than to Americans, who they appear to think have not treated them quite fairly in the past.

COD FISHERY.

A very severe storm swept over the east coast of this island on the 19th inst., the effects of which were felt more or less from Cape John on the north to Cape Race on the South. Although several days have now elapsed since it occurred the full results are not yet ascertained owing to the remote position of some of the outports, and the destruction of the telegraph wires in many parts. Enough, however, is known to place a rough estimate upon the losses of \$250,000. About 60 schooners have been completely lost or badly wrecked valued at \$50,000 while the fish destroyed is worth about \$100,000 and fish stages with other stationary property worth say \$100,000 more. So far as known at present the Labrador vessels appear to have escaped the disaster. The price of cod-fish still remains high with no immediate prospect of any serious drop, \$6.50 being given for large merchantable, and \$5.50 for small.

E. D. ARNAUD.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

*(Mr. J. B. Jackson.)*NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENG., Sept. 27, 1907.

PROSPECTS FOR CANADIAN TURKEYS.

At the present moment there is every indication that Canadian turkeys will meet with fair demand on the British market this season. According to the opinions expressed by well-informed dealers the unseasonable weather which has been experienced at different periods of the year in this country has seriously interfered with the rearing of all kinds of game. In certain parts of the country this is the case to such an extent that shooting on some large estates has had to be abandoned in consequence of the shortage of birds, the few that there are being required for breeding purposes. Local importers will rely largely this season upon Canadian supplies, and it rests with exporters in Canada to try to meet this deficiency and to assist them in obtaining the best market prices. The following suggestions are given as to how the birds should be packed.

SYSTEM OF PACKING.

It is perhaps hardly necessary to state that cold storage arrangements are essential, and also to point out that 'appearance alone,' in nine cases out of ten, decides the sale of a case of birds. This fact should be kept in mind by all new importers who may be inclined to try the enterprise. The most important point, however, and one which, by the way, has created a good deal of discussion, is the killing of the bird. On this subject dealers in the north of England declare that the only way which gives satisfaction here is that the bird should be well bled, as, by this method, when it comes out of cold storage, it is not only whiter in colour but keeps longer. If the bird is killed by the ordinary process of 'wringing the neck,' then the heat of the blood seems to accumulate and turns the flesh a greenish colour. Before being actually killed it is also suggested that the bird should be starved for a few hours, so that the food may get digested, otherwise this might spoil the appearance, and after it has been killed it should be hung up for two clear days before being put into the case.

THE VALUE OF APPEARANCE.

As before mentioned, the appearance of the birds plays an important part in the demand which they obtain, and Canadian exporters will be well advised to pay special attention to this point, especially seeing that Canadian turkeys last season only fetched 18 cents per pound, compared with 24 cents for British. Before being packed the birds should be plucked clean, and as a protection in the handling they should be wrapped round with a sheet of grease-proof paper similar to that used in wrapping butter, which, in its turn, should be tied with a piece of white tape to keep it in position. In the packing it is usual for one dozen cock birds to be shipped in a box, and in the case of hen birds, eighteen; but there is a growing preference that a box should contain only one dozen of each kind. These may appear to be unimportant details, but they all go to make up appearance, and Canadian exporters will find that close attention to them will amply repay them in the prices which they obtain.

THE DEMAND FOR CANADIAN CHICKENS.

There is every indication that local importers will look to Canada to supply them with larger shipments of chickens this season. The best time to send this class of poultry is between March and June, as this is the period when they are most in demand and fetch the highest prices. Here again it is necessary to point out that appearance is everything, and anything that can be done to make them arrive in a first-class condition is an advantage.

In the packing it is advocated that twelve birds should be put up in a case, positions alternatively reversed, and with a piece of grease-proof paper wrapped round each, and in turn a larger piece laid all round the inside of the box. Another important point, too, is the grading. Birds of equal size and quality should be packed together and on the outside of each case should be marked the gross and net weights. Supposing, for example, the birds are graded into 1, 2 and 3 qualities. Class 1 will perhaps average from 42 to 48 lbs.; class 2 from 32 to 38 lbs., and class 3 will be composed of any mixed weights below class 2.

OPENING FOR CANADIAN TOOL HANDLERS.

A remarkably good opening occurs for Canadian manufacturers to develop their trade in supplying Sheffield firms with the wood handles required in the making of picks, shovels, agricultural and garden implements and small tools, such as chisels, turnscrews, files, trowels, axes, awls, hammers, hatchets, gimlets, prickers and other miscellaneous goods. At present this trade is largely in the hands of manufacturers in the United States.

Much dissatisfaction is being shown at the supplies forthcoming, the handles received during the past few months having deteriorated so much both in quality and finish that local firms have now no option but to buy elsewhere. This makes it a peculiarly opportune time for Canadian manufacturers to step in and supply a really first-class handle and in doing this they will be assisted by a knowledge of the complaints found in the pick handles received from the United States, which are as follows:—

- (a) Too broad near the socket.
- (b) Too wide in the shaft.
- (c) Too broad in the grip.
- (d) Many handles of an exceptionally knotty nature, thus spoiling the appearance of the tool when finished.

The opportunities for building up a substantial trade in these goods are unquestionable, and I shall be glad to hear from Canadian firms who are in a position to fall in with the requirements of local buyers.

BRIGHT PROSPECTS FOR CANADIAN APPLES.

From inquiries carefully made in well-informed fruit circles, my previous reports on the market for Canadian apples are fully confirmed. Importers who are in close communication with fruit growers in Belgium, Holland and Germany, state that little competition will be experienced from that quarter, whilst, as it has now become generally recognized the English apple crop has been anything but a good one. To say that prospects are bright is only a poor way of describing the outlook for Canadian apples this season. Local importers are relying more than ever before on the Dominion's apple crop, and it is up to Canadian shippers to make the most of their opportunities.

JOHN B. JACKSON.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

*(Mr. W. A. MacKinnon.)*SUN BUILDING, CLARKE ST.,
BRISTOL, ENG., Sept. 30, 1907.

WEATHER CONDITIONS.

It would appear that both in quantity and quality the English grain crops will be very much in advance of what was anticipated towards the end of August. Continuous sunshine with warm dry air and little wind has been the prevailing conditions this month, and crops have gained immensely thereby. It is estimated now that the present harvest will rank as almost an average one, instead of, as was feared, the worst in many years.

THE POTATO CROP.

Potatoes have not turned out very well, though disease appears to be confined to certain varieties, others being immune. Estimates are that the bulk of the crop will be below average. All varieties are tending to small size.

INCREASED DEMAND FOR GRAIN.

A short crop of potatoes always proves an additional burden upon the supplies of grain and flour, since the chief alternative to bread among the masses is potatoes. The upward tendency of prices throughout the trade indicates clearly that the increased demand is having its usual effect.

THE FRUIT CROP.

The situation as regards fruit has changed but little. Excessive supplies of plums have been coming in, and have so far prevented high prices being received for early apples. The present figure for apples should not, however, be taken as an accurate index of values, for now that plums are beginning to disappear, apples, will certainly command higher prices in accordance with the known shortage of this crop. Canadian apples, even of the early sorts, if arriving perfectly sound, will be sure of a ready sale at what should be considered satisfactory prices.

PEARS.

There is a decline in the supply from France, followed by an improvement in the price of English pears, of which the Bartlett is still most prominent. Selected specimens of this variety have been bringing from 36 cents to 48 cents per dozen wholesale. In small places, the price for this fruit a few days ago was 6 cents each, while good eating plums brought 16 cents a pound. This is but one more indication that really choice Canadian pears, picked when quite firm, carefully packed and kept cool until delivered in England, may be absolutely depended upon to yield a good return. It is to be hoped that further efforts will be made to develop so profitable a trade.

LABOUR TROUBLES AND THE COAL TRADE.

At a special meeting of the North Wales Miners' Association, held at Wrexham on the 27th instant, it was decided to hand notices in to-day in every colliery in the North Wales coalfields, terminating contracts within a fortnight, unless, in the meantime, a price list is agreed to by masters and men at all the collieries.

W. A. MacKINNON.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. MacNamara.)

STOCK OF PROVISIONS AT LIVERPOOL.

MANCHESTER, October 2, 1907.

Estimate of the stock of provisions, &c., in the port of Liverpool, on September 30, 1907; together with the figures at the corresponding date last year, and also of last month:—

	September 30, 1907.	August 31, 1907.	September 29, 1906.
Bacon	12,155	16,585	19,649
Hams.....	6,771	9,870	1,627
Shoulders.....	5,671	7,797	3,960
Butter.....	5,539	5,219	16,218
Cheese (full shapes).....	88,574	88,582	68,970
Cheese (50 lbs. and under).....	405	478	
Lard (prime steam western) tierces.....	4,912	8,594	2,205
Lard (imported pure refined lard) in tierces, firkins or other packages.....	1,535	1,892	1,401
Lardine and compound.....	15	21	70

JAPAN.

REPORT OF TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND,

YOKOHAMA, September 23, 1907.

MONTHLY RETURN OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the monthly return, for the seven months ending July 31, of the present and the previous year:—

	1907.	1906.
Silk tissues, Tabutai.....	\$135,648	\$164,127
Silk handkerchiefs.....	46,917	49,557
Mats and matting (Ilanageza).....	41,364	24,594
Cotton tissues.....	1,806	2,247
Porcelain and earthenware.....	70,845	50,860
Lacquered ware.....	6,665	5,949
Tea.....	213,799	157,117
Rice.....	147,618	93,702
Saké.....	14,502	8,256
Straw plaits and chip braids.....	549	1,943
Camphor.....	1,389	6,623

IMPORTS FROM CANADA.

	1907.	1906.
Flour.....	\$86,803	\$46,148

The 'principal items' given in the monthly return number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items, making up the aggregate of trade, the annual return has to be awaited.

It may be noted, as indicative of the gradual and ultimate appreciation of Canadian flour, that although the price has been all along above the market, and while the importation of flour generally has fallen off 33 per cent, the importation from Canada has increased by 86 per cent.

GENERAL TRADE RETURNS.

Seven months ending July 31, compared:—

Principal Imports.	1907. Value.	1906. Value.
Flour, wheat.	\$1,897,667	\$2,521,389
Butter.	32,423	51,998
Salted salmon.	119,415	172,586
Condensed milk.	549,500	428,467
Fertilizers (artificial).	8,156,757	6,778,142
Leather (sole).	658,348	278,641
Leather (artificial).	142,443	90,956
Lead, pig, ingot and slab.	263,099	485,670
Printing paper.	994,148	664,035
Cotton duck.	31,835	39,184
" prints.	585,131	579,684
" satins and Italians.	428,336	545,963
White shirtings.	384,607	429,496
Grey "	1,745,488	2,388,849
Pulp (sulphite).	466,534	533,684
Horses.	—	—
Horn cattle.	70,603	28,281
Wheat.	965,902	623,401
Cheese.	8,431	9,531
Whisky in bottles.	21,547	52,216
" casks.	4,131	—
Tallow, beef.	128,255	78,128
Nickel.	58,977	224,386
Nails (iron).	1,091,439	888,869
Mechanics' tools and agricultural implements.	186,565	263,598
Musical instruments.	21,414	49,329
Sewing machines.	282,660	116,678
Lumber (pine boards).	51,812	12,225
Timber (round and square).	175,125	55,583
Portland cement.	295,906	3,772
Asbestos, boards or sheets.	15,146	—

TROUBLES IN THE SILK BUSINESS.

Season after season offers further developments looking towards strained relations between the Japanese and the foreign elements in trade. The silk situation has evidently developed a boycott. The Silk Association of America have been considering what action should be taken in regard to the information contained in a cable from Yokohama, in the following terms:—

'Please inform your members that no new orders for Ushisha, Kansasha, and Shimonita will be accepted by foreign exporters, until further notice, on account of discrimination against foreign buyers.' The cable is from the Association of Foreign Raw and Waste Silk Merchants of Yokohama.

The 'chops' mentioned in the cable, the proprietors of which are virtually boycotted by the foreign exporters, are re-reels, and are used largely in foreign countries by sewing silk, twist, and ribbon manufacturers. Details regarding the trouble are meagre, and the matter is not much talked about for publication. The difficulty is much regretted, and if it is not satisfactorily adjusted will make some trouble in a commercial way. A New York despatch alleges the action of the foreign exporters to be 'directly due to the policy of the Japanese, who are desirous of controlling the foreign market for raw silk.' The Japanese rejoinder is that 'the ground for taking this step was that the foreign merchants coveted unjust profits.'

The situation, divested of petty considerations, is not an unnatural one. It is reasonable that the trade element in Japan who were formerly tributary to the foreign merchant at the ports should aspire to independence. With financial ability there comes the desire to take all out of their trade that there is in it. This new and advancing consideration does not necessarily lead to the conclusion that the day of the foreign merchant is passing and will soon be past. It is probable only that he will have to reconstruct, and revise in facilities and methods, brace up, and make himself a continuing factor; and this applies not only to the silk trade, but to the export and import business generally.

MAILS VIA SIBERIA.

The superintendent of foreign mails gives public information that it has been arranged that from the 11th inst. letters and post cards only may be forwarded by the Siberian route to all the countries of Europe. To Russia, any kind of mail matter may be sent as before.

Mail matter to be so sent must, however, bear the superscription 'Via Siberia.'

At a meeting of the foreign banks recently held it was agreed that on the establishment of the Siberian through mail route, all mail matter, bills, &c., be forwarded by this route; and that the recognized mail day be fixed for Friday, to catch the mail leaving Yokohama post office that evening.

AN ARTICLE NOT MUCH SOUGHT HERETOFORE.

A mercantile firm, in correspondence with this office, calls attention to the value of gall-stone, with the view of procuring the article from Canada. They describe gall-stone as 'a hard concretion in the gall bladder of beef animals, sometimes called the biliary duct. It is a pea-shaped bag found on the underside of the liver, being the reservoir for the bile.' Gall-stone can be sold in Japan, in quantity, all that can be produced, at high and profitable prices varying somewhat according to quality.

Until certain Japanese began to import this article the westerners did not know the value of it, and not many knew what it was when asked for. Even at the present time the slaughter-house owners seem not to know the existence of it, or that they are throwing the gold away.'

Another interested party says:—

'A Chicago slaughter-house firm not knowing the value of it, sold their output to a Japanese importer at about thirty yen per pound, upon which the importer realized two hundred yen per pound. In course of time the Chicago firm, by way of discovering the value of the stone, gradually increased the price; the quantity at the same time greatly increased, so that the house is yet importing to Japan thousands of yen worth monthly.'

There does not appear to be any open market price for this particular article. The party interested in the inquiry understands that Canada is 'known for the abundance of beef,' and gives the assurance that 'all the gall-stones that can be procured can be readily sold at very good price if the right goods are sent.'

The inquiring party advises that any one interesting himself in this matter should provide for attendance at slaughter-houses to examine the liver in every case of slaughtered animals. The value of the article varies according to quality, the chief points being size, colour, and texture or solidity. Samples should be sent by post in tin, wrapped each piece separately in soft cotton, not pressed too hard, and not loose enough to shake about.

CUSTOMS TARIFF REVISION.

Under date of September 8, Tokyo despatches say the revision of the customs tariff by the Finance Department is progressing apace. This year and next will be devoted to thorough investigation into the condition of production of staple commodities of export and import. A draft tariff will be drawn up the year after next, which will be submitted to a joint conference of committees of the Finance and Agriculture and Commerce Departments and the Foreign Office. The result of the deliberations of the conference will be further considered with experts chosen from business circles.

IMPORTATION AND USE OF MACHINERY.

An incident of the development of industries in Japan, presented by the following statement, tabulated by the *Japan Chronicle*, will in some measure indicate the direction which the advance has taken:—

	Steam Engines.	Electric Dynos.	Locomotive Engines.	Lathes.	Others and Total.
1896	Y 818,241	Y 14,094	Y 1,620,768	Y 73,538	Y 12,944,669
1897	1,308,173	167,638	4,235,617	192,672	22,347,432
1898	697,173	91,414	4,282,502	243,863	21,114,104
1899	327,144	12,566	1,968,374	331,070	9,561,246
1900	773,255	309,195	1,089,209	231,405	13,930,302
1901	1,095,906	388,716	1,749,408	709,103	16,738,947
1902	905,253	810,989	1,708,014	473,084	12,114,323
1903	989,873	836,653	2,267,472	178,109	13,213,072
1904	1,710,914	1,266,186	2,291,327	827,615	14,757,884
1905	2,633,033	2,455,424	2,466,561	3,349,617	27,954,226
1906	2,162,123	1,408,315	1,659,951	1,120,405	27,040,554

The aggregate horse-power industrially employed at the end of 1900 was 246,000, which may have increased by the present time to 300,000. This although not large for an industrial country, is yet large relatively, for the figures have quadrupled during the previous ten years; and there is no reason to doubt that the ratio of increase will continue, especially in the lines indicated, with the addition of some others amongst which may be, conspicuously, flour-milling machinery. The *Chronicle* in presenting the figures directs attention to the remarkable increases that followed the war with China twelve years ago, and that with Russia two years ago.

THE HIGH PRICE OF RICE.

The weather upon the whole to date has been favourable to the rice crop, but yet the price is commonly declared to be high beyond all reason. The middle of September passed with prices at the Tokyo Exchange:—

	Per koku.
For September	\$9 14
For October	8 58
For November	8 18

At the Kobe Exchange:—

For September	\$8 85
For October	8 44
For November	8 09

(1 koku=5 bush.)

These are regarded as famine prices. Being the chief staple article of food for the Oriental masses, the excessive price, nearly double the normal, bears very hardly upon the people.

THE RICE HARVEST PROSPECTS.

On the authority of the Director of the Agriculture Bureau, Department of Agriculture and Commerce, vernacular contemporaries state that the first forecast of this year's rice harvest estimated the crop to be about 35,000,000 bushels above the figures of a normal year. As a result of the recent inundations about 7,500,000 bushels of the crop were lost, and further damage may be done by the rainfall and the low temperature which has prevailed during the past few days. Nothing definite can be said as yet, owing to the absence of reports on the damages. But the total damage will probably not much exceed 5,000,000 bushels, in which case the increase will be still 25,000,000 bushels above that of a normal year. At any rate, there can be doubts in the opinion of the official quoted, 'that the rice harvest yield will be above that of a normal year.'

SHIP BUILDING IN JAPAN.

In the Mitsu Bishi yards at Nagasaki there are under construction two steamships, the largest yet built in this country. The gross tonnage of each of these liners is 13,500 tons. They are being fitted with turbine engines, and for the speed of nineteen knots. These ships are to displace other two of the Toyo Kisen Kaisha fleet (Oriental Steamship Co.), of half their tonnage, operating between the Orient and San Francisco.

Upon the general subject of increasing tonnage the Oriental press take note that the Messageries Maritimes, the leading French line, commonly known as the M.M., have decided to put three new ships of ten thousand tons each on their run, which is between Marseilles and Yokohama via ports. The increase of business, especially, is given as demanding this large increase of shipping capacity.

Increases in ocean transportation facilities, both passenger and freight, are conspicuous, to the American continent, excepting to Canada.

A. MACLEAN.

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT.

(Mr. C. E. Sontum.)

CHRISTIANIA, NORWAY, GAUBBEGD No. 4, October 3, 1907.

FARMERS ECONOMIC ADVANCE ASSOCIATIONS.

The farmers economic advance associations in Denmark were created according to a law of March 26, 1898, with the intention of exclusively furnishing the members with temporary loans for covering the running expenses of their farms, such as the purchasing of seeds, feed for the cattle, artificial fertilizing, renewal of their stock and inventory as well as to wages for their hired help. The directors of the associations consist of one foreman appointed by the 'amtsraad' (county board) and of four other members elected by the associations. The directors decide about the applications for membership, assess the farms of those taken up in the associations to a certain loan value according to the number of cattle, that normally is kept on the farms, and also decide about the size of the advance loans up to kr. 50 (\$13.33) per head of cattle, but not more than kr. 3,000 (\$800) in all to one party. The directors also decide about the rate of interest, which is to be the same for all members, and must not exceed $4\frac{1}{2}$ per cent per annum. Every member must pay an entrance fee of kr. 1 (27 cents) per head of cattle, which he keeps, to the reserve fund. The advance loans cannot be had for a longer time than nine months. The total loan value of one association must not without the consent of the Minister of Agriculture exceed 10,000 cattle or be less than 1,000.

The laws of the associations shall among other things contain the above-mentioned provisions, and be confirmed by the Minister of Agriculture in order to obtain certain favours granted by the Danish government, viz., that the members can write out bonds to the associations on unstamped paper, and that the associations of the government each can obtain a loan for a starting capital. These loans from the government, however, must not exceed kr. 30 (8) per head of cattle owned by all of the members of the association. These loans, to which there is placed for disposal by the Danish government 5 Lillion-krone (\$1,333,300), yield an interest of three per cent per annum.

The Danish Agricultural Department inspects the doings of the associations, the number of which is at present 168 with a state loan of in all kr. 4,997,460 (\$1,332,656).

THE HARVEST IN NORWAY.

The hay crop is now harvested practically all over Norway. For the eastern part of the country the quantity is considerable above that of an average year; for the western and northern part the return is touching an average year, or rising slightly above that. Owing to the protracted wet weather the hay has been harvested under very trying conditions, and the quality has undoubtedly suffered very much.

The prospects for the grain crop are more gloomy. Except the rye crop, which has been very rich, all other grains are a decided failure, there being no possibility of their getting ripe in most places; accordingly, there is likely to be cut down more unripe grain this autumn than for years. The potato crop will be small, and the prices at present are about fifty per cent higher than in regular years.

THE HARVEST IN SWEDEN.

The natural fields, and still more the fields under cultivation, have this year all over Sweden given an excellent crop of hay. On account of the cold and rainy summer, the harvesting has been much delayed also in Sweden, so most of the hay is more or less damaged; still the quality is not poorer than it can be used for cattle food. As besides considerable quantities of grain will have to be cut in unripe state and used as straw fodder, there is hardly reason to believe that it will be necessary to import hay to Sweden this year. Quite on the contrary, there is figured on some export of Swedish hay. The prices are very reasonable.

THE HARVEST IN DENMARK.

In spite of the steady interruptions on account of the rain, the harvesting work in Denmark has gone on fairly well, and on the islands the farmers are nearly through with the harvesting. The barley, oats and mixed grain has filled very well on the fields, and the marrow seems to be well developed. In certain districts it is estimated that this crop will be the best for the past twenty years. The threshing, however, is not yet so far advanced that it can be ascertained, if the crop really will hold, what it seems to promise. The rye crop on the other hand is partly a failure, and the pea-fields will give less than a medium crop.

CONDENSED MILK INDUSTRY OF NORWAY.

The condensed milk industry of Norway is steadily increasing. Although there are at present only four factories, these have grown to be very large factories, which have during the last years used in all more than fifteen Lillion gallons of milk per year. The factories pay for the milk from 9½ to 10 öre per litre (about 2 7-10 cents). 1 gallon equals 4½ litres.

WAGES AT THE NORWEGIAN PULP FACTORIES.

The wages at the Norwegian pulp factories since the strike have been stipulated as follows: Minimum wages, kr. 3.50 (93 cents) per day. On contracts the working-man can make up to kr. 5 to kr. 6 (\$1.33 to \$1.60) per day. They must all pay their own board.

C. E. SONTUM.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., October 20, 1907.

ELECTRICAL SIGNALLING.

Power signalling is steadily growing in Great Britain, and almost every scheme of rebuilding a large terminus or junction includes the installation of some system of electric or pneumatic signalling. The latest installation will take place at the new Great Western Railway Station, Birmingham. This power signalling equipment will comprise 304 levers in two cabins, containing locking frames with 224 and 80 levers

respectively. On this system any ordinary direct current supply of electrical energy having an E.M.F. of from 110 to 220 volts may be used, the maximum current required at any one moment not usually exceeding 20 amperes per cabin worked by one man.

The current required for working an ordinary pair of points, with rail sections up to 100 pounds per yard, and facing point lock and bars averages four amperes at 130 volts. The time taken is from two to three seconds for the complete movement. The current for operating a main line signal of the heaviest type averages $1\frac{1}{2}$ amperes during a movement lasting $1\frac{1}{2}$ seconds. The motor is then automatically cut out, and the signal is held in the proceed position by a magnet which is energized by a current of 0.25 ampere through the coils.

P. B. BALL.

GREAT BRITAIN.

REPORT OF THE CANADIAN HIGH COMMISSIONER.

(*The Rt. Hon. Lord Strathcona, G.C.M.G., &c.*)

17 VICTORIA STREET,

LONDON, S.W., October 8, 1907.

The Right Honourable the Minister of Trade and Commerce,
Ottawa, Canada.

SIR.—The head of a well-known firm of carriage builders has written me on the subject of the desirability of Canadian coach builders sending carriages for display at the Franco-British Exhibition in London next year. The gentleman referred to is a reliable authority on the subject of coach-building, and a man of excellent standing in the trade, and as I have every confidence in accepting his statements, I think it well to bring the matter under your notice, in case you may consider it advisable to draw the attention of Canadian manufacturers to the opportunity in question.

The International Horse Show will again be held in London next year, as well as the Olympic Games, and both events will attract a large number of visitors, who would be likely to interest themselves in such an exhibit of Canadian-made carriages at the Franco-British Exhibition.

The gentleman alluded to suggests that it would be unwise to send vehicles to compete with heavy vehicles of European manufacture, but that light buggies and trotting wagons with indiarubber tyres would probably sell. He adds that some of the carriages might be built of such a size as would enable them to be turned in an English lane, by which I presume he alludes to the disposition of the front wheels.

My correspondent has been good enough to offer his services in connection with the unpacking and placing of the vehicles at the exhibition, if any assistance of the kind should be needed by Canadian manufacturers. He is a man who has all along taken a great interest in the Dominion, and I am inclined to think that the offer is made, not so much with the idea of profiting by the occasion, as to be of some practical use in a matter where the services of a man with a knowledge of the trade would be needed.

I am, sir, your obedient servant,

STRATHCONA,

High Commissioner.

JAPAN.

REPORT OF TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND,
YOKOHAMA, October 3, 1904.

TRADE ECHOES FROM CANADA.

Recent correspondence may be recited in order to show, what has already been shown from time to time in these reports, that the unreadiness on the part of Canada to entertain any considerable export trade to the Far East is disappointingly evident.

JAPANESE FLOUR MARKET.

Flour is of course the great staple article of export at present looked for, to Canada, by the Orient. The figures show that there is some increase, and a growing capacity for further increase with regard to that article; but correspondence is to the effect that conditions of production and export as viewed from this market are developing very slowly. Correspondence from Western Canada during the past summer may be referred to as affording a view of the circumstances under which the late season's products are passing out, and the harvest, now being realized, is coming in.

CONTINUED HIGH PRICES.

A correspondent under date June 10, says:—

'The continued high prices here for wheat and flour appear to handicap the export trade to the Orient. Flour has advanced 60 cents per barrel in the last month; and the greater part of the season the price has been above an export basis. With regard to the inquiry from the Manchurian Trading Company, we are offering them the best conditions we can, but have not much expectation, since it is almost impossible for us to compete with Australia at Hong Kong. However, in the face of all this, there is quite a large quantity of flour going forward by every Canadian Pacific Railway steamer. We have no idea where it goes to, or what price it fetches; but all the millers with whom we have discussed this subject are of the opinion that the export of Canadian flour to the Orient has so far been done, if not at a loss, at a less net price than it would fetch in Canada.'

WILL SUBMIT SAMPLES AND PRICES.

Another correspondent under date June 10, says:—

'We will be pleased to go into the matter of shipment of wheat immediately the new crop begins to move, and we are in a position to submit samples and prices. This however, as you will observe, will be some three to four months yet; meantime we shall keep our oriental correspondents posted, presenting things to them in as favourable a light as possible regarding prospects of business in this territory. At present conditions admit of little being done, the very backward spring that we have had will tend to reduce our visible supply; but, as the winter wheat is looking particularly well, we will doubtless have limited quantities to supply, which in another year or two should show a very substantial increase.'

FORWARDING SAMPLES.

Another correspondent under date June 18, says:—

'With regard to flour, we are now writing and at the same time forwarding samples and c.i.f. quotations on what we have to offer, which is not a great deal, as nearly all the Northwest mills are sold up for several months in advance, leaving them nothing to offer at the present moment. There has been considerable demand for low grade flour from China, and the cargoes of nearly all Canadian Pacific steamers during the past few months have been almost exclusively of this commodity. It happens at the moment that one of the large milling companies at Winnipeg have a few thousand barrels to ship, upon which we are counting.'

BUSINESS NOT HOPEFUL.

Another correspondent under date June 20, says:—

'I am writing and sending samples with quotations, but for this season I have not much hope of business resulting. It is encouraging, however, to be able to say that the agricultural development of the Northwest is going on at such a rapid pace, it will only be a matter of time when we shall be able to compete with Washington and Oregon in Japan and Northern China, but I am not sanguine about competition with Australia in Hong Kong and Southern China.'

DIFFICULTIES IN THE WAY.

Another correspondent under date June 4, says:—

'People have been led to the conclusion that an enormous trade should at once spring up between Canada and the Orient. They think because there is a demand from the Orient for wheat and flour, that necessarily there is a profit in supplying the same. The thousand and one difficulties that have to be smoothed away before trade runs as on oiled wheels they have no thought of; they forget that the matter of production is as necessary to business as that of consumption. No doubt gradually facilities for transportation will develop as production develops; but at present the expense entailed in moving grain and flour from Alberta to the coast renders competition with Washington and Oregon wheat impossible. There is no elevator accommodation here (at Vancouver) and vessels are not fitted to carry grain in bulk, and unless grain can be shipped from Vancouver in bulk we shall compete only spasmodically with grain from the United States.'

CANNOT COMPETE WITH SOFT WHEAT.

Another correspondent under date June 1, says:—

Re flour: From correspondents and samples we are inclined to think that the flours represented are made from Oregon or Washington soft wheats. As our flours are made from the best hard Fyfe wheat, we could not compete with these soft wheat flours in price, and unless there is a demand in the Far East for the best quality of flour, from buyers who would be willing to pay a reasonable price, it would be impracticable for us to do any business. We have had several replies lately from dealers in Japanese ports, but in each case they state they would require us to make consignments in order to introduce our brands. We do not adopt this method, and unless we can make c.i.f. sales we would not care to do any business in Japanese or Chinese markets.'

Another correspondent writing under date May 30, says:—

'With reference to the wheat situation we use practically all the good wheat we can get hold of ourselves in Alberta, but occasionally are in a position to ship out a consignment of flour, and if trade would warrant it we would manufacture a special flour for the Japanese and Chinese market.'

WILL GIVE EVERY ENCOURAGEMENT.

Another correspondent under date May 30, says:—

‘We take pleasure in answering inquiry, and we assure you we will give the inquiring firm every encouragement in the future. The present price of wheat is out of line for export, and we will write them fully setting forth the facts at the present time, and will also send them samples of different kinds of wheat; but we will have to await a favourable turn in the market in order to do actual business.’

WILL SEND SAMPLES.

Another firm writing under date May 30, says:—

‘We have pleasure in giving the firm in question all the information available regarding the flour market, and will send them samples and current quotations. At present, however, we are not in a position to make them a firm offer on a quantity of flour for immediate or 60 days shipment, for the reason that we are sold up to August 1 for Hong Kong. We will be in a position at the commencement of harvest to make them firm offers on large quantities. We are encouraged to say so by the favourable crop prospects in Alberta at present, looking forward as we are to the largest crop of wheat ever raised in this part of Canada.’

SAMPLES INDISPENSABLE.

Another correspondent under date August 1, says:—

‘The first thing we are trying to do is to get samples of the Alberta wheats so that we may send same to our correspondents in Japan, samples being apparently indispensable to business. We are not leading our correspondents to expect immediate business, but rather that there is every prospect of business in the near future. In fact the export wheat trade here (Vancouver) is operating under primitive and crude conditions. For the purposes of sale in the far eastern market samples are understood to be invariably requisite; and yet, with that information before them, our correspondents in the interior offer us various classes of wheat but no samples. It would seem as if people thought that there was only one class of wheat for sale; and that, just the wheat they happen to want to sell. The wheat trade in the interior must do more to facilitate export if they expect people at the Canadian ports to compete with those of the United States. Inconvenient as shipping facilities are, and although the trade in the interior is not taking the trouble to understand the situation as it has been placed before them, with a little extra effort we are sending forward samples of Alberta and Saskatchewan growth with code, ready for quotations, so that when the opportunity offers prompt advantage may be taken.’

PRICES IN JAPAN TOO LOW.

Another correspondent writing under date August 12, says:—

‘We are pleased to have the popularity which our brands of flour are gaining in the far east confirmed by your testimony. We may state that lately it has been no trouble whatsoever to sell flour, repeated orders coming in without solicitation. The only objection we have to the market in Japan is that the prices are so low as to leave us no margin whatsoever; and the only thing we have to work for is to give good quality at all times in the hope that our brands will become so popular and in such demand that they will eventually get a better price. We have found it advisable to have our more popular brands registered, as they have become popular, and we expect in due course profitable also. With regard to shipping flour to Manchuria we do not think the prospects are promising, as the Canadian Pacific Railway do not seem to favour assimilating rates so as to permit us to compete with through steamships. We

assume that this is due to the small carrying capacity of the C.P.R. vessels. However, we hope at some future time to have better facilities in this way. We feel certain there will be more wheat grown in western Canada this season than ever before; that is, the Manitoba crop will be more affected by the shortage than Alberta and Saskatchewan.'

TRADE NOT OF SUFFICIENT VOLUME.

These are only a few of the authorities, of comparatively recent date, whose testimony goes to support the view, as taken from this side of the Pacific, that Canadian trade tributary to the Orient is not yet of sufficient volume to offer effective competition in this market. The commission merchant affects at least to wonder why it is; but he shows by his inability to supply, or the weakness of his performance to that end, that however desirous he may be the conditions do not enable him. The miller, possibly with a sense of greater responsibility, is more candid. By a great majority he admits, or has been admitting since Alberta wheat began to grow, that he is not now ready, but is getting ready so as to be prepared when the Alberta wheat crop will be waiting for him.

Then there will have been noticed, in the foregoing quotations from correspondence, that the facilities for export are far from being what they should be. Port elevators, export-in-bulk, and sufficient tonnage, are all things of the future, as much as the grain and the milling capacity are.

It is, of course, not fair to hold any party responsible for these shortcomings. This is only the third harvest since the growing of wheat, on an export scale, was discovered to be the practical result of experiments in Alberta. Until the crop should be grown, or the marketing of it at least anticipated as an assured enterprise, it would be unreasonable to expect that capital would provide the requisite facilities for getting it to the far eastern markets. Production, manufacture, and transportation facilities, are related and interdependent things that cannot stand alone. But until we have them it is not to be expected that Canadian flour and wheat will compete in this market with the flour from Washington and Oregon. Even then Canadian export will be at the disadvantage of the mountain haul, from which its competitor may be said to be exempt.

It will be noticed that one correspondent of June 10, cites the milling trade as of the opinion that their sales to the Orient have been so far at a loss, or at a less net profit than if done at home. Another, under date August 12, states the objection to the Japanese market to be that it leaves no profit whatsoever. This simply goes to show that Canadian flour can get a better price than the market in Japan will offer, which is a comfortable situation. Doubtless when the Canadian miller finds much more flour on his hands than he can market in Canada he will look more cheerfully to Japan.

The second correspondent who writes under date June 10, is one of a numerous sort in trade generally. They will not consign, or go out of their way, whatever others may do. This milling firm were put into correspondence with the trade here. One of the oldest and strongest houses in the far east asked for the consignment of a small trial order, made other conditions common to firms of the highest standing, and altogether gave a favourable opportunity to place this firm's flour on the market under the best conditions. Their answer was to the effect of what is in the quotation from their letter. All that needs to be said to such as these is, what has already been said and repeated in these reports: They must make their brands known, at their own expense, when they want to get the benefit of this market.

GENERAL TRADE RETURNS.

Principal Imports.

For the eight months ending August 31, of the present and the previous year:—

	1907.	1906.
Flour wheat..	\$2,151,858	\$2,899,838
Butter..	33,854	64,938
Salted salmon..	119,424	194,682
Condensed milk..	640,728	487,696
Fertilizers, artificial..	8,536,241	7,319,520
Leather, sole..	788,468	338,968
Lead, pig, ingot and slab..	27,359	32,631
Printing paper..	1,080,896	722,733
Cotton duck..	35,106	40,667
Cotton prints..	957,658	791,486
Cotton satins and Italians..	590,332	724,919
White shirtings..	440,834	485,899
Grey shirtings..	2,426,130	2,965,930
Pulp..	538,690	639,149
Horses..	55,573	13,529
Horned cattle..	88,902	33,769
Wheat..	998,187	633,667
Cheese..	9,118	10,517
Whisky in bottles..	26,991)	88,462
Whisky in casks..	4,458)

Nails, iron..	1,199,786	945,241
Mechanics' tools and agricultural imple- ments..	204,987	314,953
Musical instruments..	25,602	60,504
Sewing machines..	310,010	153,778
Lumber (pine boards)..	64,660	18,737
Timber (round and square)..	208,771	88,513
Portland cement..	314,351	3,773
Asbestos, boards or sheets..	16,767

MONTHLY RETURN OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the monthly return, for the eight months ending August 31, of the present and the previous year:—

Exports to Canada.

	1907.	1906.
Silk, raw..	\$ 15,378	\$118,050
Silk tissues, habutae..	145,800	175,313
Silk handkerchiefs..	63,719	58,627
Cotton tissues..	1,810	2,611
Mats and mattings for floor (Hanagoza)..	41,470	25,109
Porcelain and earthenware..	80,849	56,583
Lacquered ware..	7,047	6,450
Tea..	314,624	232,136
Rice..	180,719	101,438
Saké..	17,760	9,588
Straw plaits and chip braids..	549	2,283
Camphor..	1,600	6,623

Imports from Canada.

	1907.	1906.
Flour.	\$101,545	\$49,564

The principal items given in the monthly return number only twenty-five of imports and twenty-five exports. For information respecting the lesser and numerous items making up the aggregate of trade the annual return has to be awaited.

A PECULIAR HIGH TAXATION GRIEVANCE.

A suffering complainant says the Japanese government every year contracts with a certain number of foreign teachers to come to Japan as instructors in the government schools, guaranteeing them a salary of so much per month, but nothing is said about excessive tax (income) which they will be obliged to pay out of this salary back to the government. The complainant further says that to come to this country on the promise of, say, Yen 300 (\$150) a month, without information that more than Yen 15 (\$7.50) a month will be deducted from that amount for taxes, is to pay but Yen 285 (\$142.50) a month instead of the promised Yen 300, which is manifestly unfair. The foreign teacher, with the present high rents and increasing cost of living, finds it difficult enough to get on with the small salary he is promised; but had he known it was to be even less by more than 5 per cent he very probably would not have accepted the position. It seems only right that every foreigner asked to come to Japan as a teacher should be plainly made aware of the fact that his salary does not represent its face value, so that he may have a fair chance of refusing or accepting the conditions. Many foreigners suffer in this way when it is too late to remedy their mistake.

The answer of the government doubtless would be that teachers as well as others come to this country in their own interest. It might be regarded as unduly officious on the part of the government to warn intelligent people of the ordinary consequences of their own act. Taxation in Japan is high; but it is open to the public.

THE LABOUR QUESTION IN JAPAN.

Labour troubles have been somewhat frequent of late. The latest, arising from the increased cost of living, has occurred among the knitted goods operatives in Osaka. They demand an increase of wages, threatening to go on strike. It appears that the operatives had been earning 80 to 90 sen (40 to 45 cents) a day until eight or nine years ago, when competition from the rural district caused a falling off to about 50 sen (25 cents.) They had been demanding an increase, during the past two or three months, on account of the increased cost of commodities. The demand is for an increase of 30 per cent, if necessary by having recourse to a general strike. This is one of the results of the increased cost of living, to all classes in this country.

HIGH PRICE OF RICE.

The Kobe *Chronicle* reports that the Chamber of Commerce (Japanese) of that city, is of the opinion that to increase the duty on rice will simply increase the already too high price, and impede further development of the industry generally. For this reason the Chamber regards it as of primary importance that rather than increase the duty at the present time it should be discontinued or reduced. The chamber expresses the opinion 'that any increase on the duty on cleaned rice as suggested in some quarters, will do great harm to the Empire. That there may be some advantage in the imposition of a higher duty on cleaned rice than on the uncleaned, if the duty on the latter cannot be abolished, as that would tend probably to encourage the importation of the cereal in the uncleaned state and thus encourage the rice cleaning industry.' The Chamber, in view of this advantage, has made representations to the government suggesting the adoption of some such course.

ABUNDANT WHEAT IN MANCHURIA.

The wheat crops in Manchuria have been so abundant that it is being urgently requested that the prohibition against exportation shall be withdrawn. Both Japanese and Chinese are petitioning the governor in this respect, says the Peking and Tientsin *Times*, as the accumulation of wheat is far in excess of domestic needs, and the farmers will suffer if it cannot be turned to account.

THE MEDICAL PROFESSION—A LANGUAGE PROBLEM.

An American doctor, who recently passed the examination of the Japanese authorities for a license to practise in Japan, wrote his answers in the English language. Exception is taken by some against this practice. It is maintained that the acceptance of the answers in English was against the regulations and usage concerning the examination of candidates for a license for the practice of medicine, and that competent practice under license is not practicable without a knowledge of the language in general use.

It is said, however, that the authorities maintain that it was quite regular—no express provision having been made in the regulations prohibiting answers to be written in a foreign language. At present the examination committee is fully competent to understand foreign languages, and foreigners are quite at liberty to write their answers for such examinations in their own language.

THE CEMENT TRADE.

Commenting upon this line of trade, the Japanese trade journals state in substance that during last spring, when the business boom was still active, large orders were issued for foreign cement on speculation, and about 80,000 casks arrived at Yokohama and about 12,000 at Kobe in June last. By that time, however, a great change had taken place in the situation; many new companies had collapsed, and the demand for cement had practically ceased. The imported article, chiefly American cement, was found to be inferior in quality, and importers made great efforts, but without result, to dispose of their stocks.

These large arrivals of foreign cement and the projected cement companies, and also the extension of the old cement works, adversely affected the market, and buyers consequently hesitated. The situation was nervous almost to the degree of panic. The new enterprises, however, collapsed, and if the old companies have increased their output, the stock has not glutted the market to such an extent as to force down the price. By the recent inundations heavy damages were caused in various parts, and the necessary repairs will soon call for a large demand for cement, and the market has therefore a good prospect.

RICE CROPS REPORTS FAVOURABLE

Merchants interested in the rice market may be informed that on the 2nd inst., there was something like a debacle in the rice market. Prices had been kept up unduly by the unsettled state of the weather, but all danger on that score having disappeared, there was a sudden fall, which reached as much as 26 sen per koku (1 koku=5 bush.) for December delivery. Such a fall is very unusual in the rice market. It is evident that operators on 'Change are now convinced as to the success of the rice crop, with the natural result that present high prices cannot be maintained.

A. MACLEAN.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. MacNamara.)

CANADA CHAMBERS, 36 SPRING GARDENS,

MANCHESTER, ENG., October 15, 1907.

THE PEOPLE'S BREAD.

From an article recently published I condense the following:—

The recent advance in the price of wheat only equalled by the Leiter corner in 1898, is a reminder to the British people that the problem of the wheat supply is becoming a pressing one. In a few months wheat in the United States has advanced first to a dollar, 4s 6d. per bushel, and then to nearly \$1.25, or 37s. 4d. per quarter. The price in London for best Manitoba wheat has advanced to 46s. 6d. per quarter, and because of the advance, the London Flour Millers Association decided to raise the price of flour by six pence per sack, and this will necessarily be followed by a rise in the price of the loaf. The universal belief that bread at 4½d. or 5d. for a 4 lb. loaf is the limit, is likely to receive a crash in the near future. Years ago the German Professor Pohle pointed out that a general advance in the price of wheat was inevitable, and events are realizing the prediction. There will no doubt be fluctuations in the near future, but the tendency will be upwards, for the reason that the consumption is overtaking the supply of wheat.

The total area of wheat land at present in cultivation is capable of supplying 656,000,000 mouths with bread, and the number to be fed is 585,000,000. The margin may seem large, but it is one which will rapidly vanish with the natural increase of population, while the process will be accelerated by the tendency now shown in Japan and China to use wheat instead of rice for feed. Thus, ten, fifteen or twenty years will see the supply fall below the demand unless fresh wheat fields are brought into cultivation. Fortunately there are nearly 500,000 square miles of such land awaiting tillage in western Canada, but outside of that there is no great available area. The future bread supply of this country will thus depend on the relations of Canada to the United Kingdom, and we shall do well to make every effort to bind our daughter state to our side by the closest ties of affection and mutual interest. If these wheat lands were to pass into hands unfriendly to England her people might be made to pay enormously for their wheat, and a repetition of the days of 1812, when the loaf stood at 1s. 8d., might occur. In this connection, it might be stated that the demand for Canadian flour is greater now than for the past five years, and large buyers in London, Glasgow, Hamburg, Amsterdam, Christiania and Helsingfors are endeavouring to establish buying connections.

CHEESE.

I am indebted to one of the largest produce firms in this city for the following report:—

'We are pleased to state that the improvement in Canadian cheese this year has been well maintained, and one of the great difficulties that we had to contend with last year, which was the shipping of cheese in the green state, has been noticeable by its absence this year. The goods have come forward not only in good condition, but the averaging of same has been fairly well effected.

'We are now nearing the close of one of the most exceptional seasons we have had. The make opened up at the early part of the season very late, and we are

going to close the season with a great shortage of cheese on that of last year. Our home make has been exceptionally large, which has filled up the shortage in Canadians, and all through the season domestic has been placed on our market within a few shillings of Canadian prices, thus causing a good healthy home demand. It is only within the last two weeks that there has been any noticeable falling off in the make. This week there is a great shortage, and it has dropped off fully 30 per cent of what it was a month ago.

'The Canadian season, from a financial point of view, has been disappointing, owing to the great speculation of a few who have tried to corner the market, and have evidently realized their object to a great extent. The result of this has caused prices to advance very rapidly during the last two or three weeks. What the future result of this manipulation will be we cannot say, but certainly it is not conducive to a healthy tone of trade from our point of view. There is every prospect of a huge make from New Zealand and Australia; we ourselves having in sight our first consignment, which is quite a month earlier than usual.

'We are looking forward next year to a better Canadian trade, and if only this system of manipulation could be kept out of your market we should have a much healthier tone, and one that would be beneficial to every one on both sides.

EGGS.

'The supply of eggs on this market is very scarce, and the demand is much in excess of the supply. Present prices are 1s. per hundred higher than four weeks ago, and the only countries supplying us with any quantity are Russia and Austria.

BACON.

'The demand is greater than the supply, which is very scarce indeed, and prices are far in excess of Irish and other grades.'

APPLES AT LIVERPOOL.

Messrs. Woodall & Co. report:—Arrivals this week 33,188 barrels, 525 boxes, 33,363 barrels. Arrivals to date, 61,680 barrels. Arrivals against same period last year, 71,590 barrels

The total arrivals to date are 61,680 barrels, of which more than half (33,363 barrels) arrived this week, as against 71,590 barrels to same period last season. The English crops have turned out much as was anticipated in our report of August last, the supply of plums having been enormous, and until they were cleared had a serious effect on the prices of early apples, and first of which reached here the latter part of August. Canadian fruit has been of better quality and condition than last year, and has consequently commanded the trade, and if winter fruit shows the same superiority, there should be a satisfactory season. The first arrivals of Nova Scotia were small and contained a large amount of black rot. There has been an excellent demand, the market closing at its best, the bulk of supplies during the week being from Canada and Nova Scotia. The following prices were readily paid for coloured varieties of:—

Canadian, No. 1....	18s.	25s.	No. 2....	13s. 6d.	19s.
Ordinary, "	14s.	17s.	"	11s. 6d.	15s.
Common, "	11s.	13s. 9d.	"	8s. 6d.	10s.

TRADE RETURNS.

According to the Board of Trade returns for September issued recently, the imports were £45,341,276, an increase compared with the same period last year of £281,441, and the exports £35,156,230, an increase of £4,631,167 over September last year.

The imports for the nine months ended September show an increase of £32,129,083 compared with the same period last year, and the exports an increase of £41,226,919.

P. B. MACNAMARA.

SOUTH AFRICA.

REPORT OF TRADE COMMISSIONER.

(Mr. John A. Chesley.)

RHODES BUILDING, CAPE TOWN,

P.O. Box 668, September 17, 1907.

SIX MONTHS TRADE RETURNS.

The figures showing Cape Colony's trade for the six months ending June 30, 1907, have just been issued and are as follows:—

Total imports over sea, £24,528,829; total exports over sea, £26,494,571. Excess of exports over imports for the first six months of 1907, £1,965,742. For the corresponding period of 1906, the total imports over sea were £23,311,181, and the total exports over sea were £23,877,516. Excess of exports over imports for the first six months of 1906, £566,335.

Imports for the six months ending June 30, 1907, show an increase of £1,217,648 over imports for the same period of 1906, and exports for the six months ending June 30, 1907, show an increase of £2,617,055 over exports for the like period of 1906.

The imports of merchandise into Cape Colony from countries outside the South African Customs Union, for the first six months of 1907, are £1,447,392 less than the imports for the same period of 1906. This condition is in some measure due to the increased production of agricultural and animal products in the British South African Colonies. Notably in beef, butter, cereals, and mutton.

Although the imports of merchandise, from all countries outside the South African Customs Union for the first six months of 1907, are £1,447,392 less than the imports for the corresponding period of 1906, yet it is encouraging to note that imports of merchandise from the United Kingdom and British Colonies have increased during the period named from 74·7 to 78·7 per cent. While imports from foreign countries for the same period have decreased from 25·3 to 21·3 per cent.

The following summary shows the total value of the imports into, and exports from Cape Colony over sea for six months ending June 30, 1907, as compared with corresponding periods of 1906; also the value of the imports from, and exports to other states in the union for similar periods:—

FROZEN MEATS.

The imports of frozen meat into Cape Colony for the six months ending June 30, 1906, were 27,731,069 lbs., value £279,568. The imports for the six months ending June 30, 1907, were 8,034,729 lbs., value £99,488, showing a decrease for six months of 1907, as compared with the first six months of 1906, of 19,696,340 lbs., value £180,080.

This large reduction in the quantity and value of imported frozen meats into Cape Colony is due to the great increase in the number of cattle and sheep during the last five or six years, owing chiefly to the extermination of the disease known as 'Rinderpest,' which in past years has been a great destroyer of cattle in the South African colonies and territories. In the year ending May 31, 1898, the loss of cattle from rinderpest in the Cape Colony alone was 410,000, and the total losses in the colony and Bechuanaland during this period from rinderpest, drought and exposure were 1,400,000 head. The loss of sheep in the same period, in the colony and territories from diseases of all kinds, drought and wild animals, amounted to 2,086,000. The eradication of the cattle and sheep diseases, together with the provision made against further loss from wild animals, has resulted in a very large increase in the number of food producing animals in South Africa.

The total importations into Cape Colony, whether for her own consumption or in transit up country, were but little more than half in 1906 what they were in 1904. For the Orange River Colony they were much less than half, and for Natal they were a little less than half. For Rhodesia they were less than one-third. The main market remains that of the Rand mines, and hence the importations into the Transvaal have not fallen to the same extent, as they have in the cases of the other colonies. While the supplies of local meat have become more abundant, the number of employees on the mines has increased very considerably, with the result that the effect which would otherwise have become apparent in a reduction of the consumption of imported frozen meat is to some extent counteracted.

The total value of frozen meats (beef and mutton) imported into South Africa in the three years 1904, 1905 and 1906, were as follows:—

Year 1904, £1,696,000=£8,253,866; year 1905, £1,197,000=£5,825,400; year 1906, £856,000=£4,165,866.

The following statement shows the quantity and value of imported frozen meat into Cape Colony, and the countries from which imported, for the first six months of 1906 and the first six months of 1907:—

SIX MONTHS ENDING JUNE 30.

BACON AND HAMS.

There is active demand here for Canadian bacon and hams. Both these commodities have an excellent reputation in the South African market. Systematic effort on the part of Canadian exporters should result in a large increase in the export of pork products to South Africa. The imports into Cape Colony for six months ending June, 1907, were 1,610,519 lbs., value £57,008. The imports for the corresponding period of 1906 were 1,314,031 lbs., value £43,612, showing an increase for the first six months of 1907, as compared with the first six months of 1906, of 296,488 lbs., value £13,396.

The following statement shows the quantity and value of bacon and hams imported into Cape Colony and the countries from which imported for the year ended December 31, 1906:—

	Lbs.	£
United Kingdom.....	2,532,066	89,121
Dominion of Canada.....	250,503	7,804
Queensland.....	586	15
France.....	917	31

German S. W. Africa.....	193	6
United States.....	37,998	1,213
Other countries.....	392	18
South African produce.....	12,767	391
Total.....	2,855,164	99,688

APPLES.

There is a good market here for apples. As the season approaches for marketing this fruit, inquiry is being made as to the probable supply from Canada. Canadian apples are much appreciated in South Africa, indeed, so far as I have been able to learn they are preferred to any others that reach here. Kings, Ben Davis, Blenheim, Golden Russets, Canada Reds, Wealthy and Spy are familiar names in the South African market. Fruit growers and exporters should exercise care in packing, and so maintain the excellent reputation Canadian apples have in this market. There is no question as to the quality of the fruit itself, and the possibilities for a large increase in the sale of Canadian apples in the South African Colonies are good.

FRESH FRUIT IMPORTED.

The following statement shows the value of fresh fruit imported into Cape Colony, and the countries from which imported for the year ended December 31, 1906:—

United Kingdom.. . . .	£ 1,187
Dominion of Canada.. . . .	5,010

Total.. . . .	£45,968

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(*Mr. E. D. Arnaud.*)

GAZETTE BUILDING, ST. JOHN'S, October 22, 1907.

CUSTOMS RETURNS.

The following figures showing the totals of the imports and exports of the colony with the undermentioned countries have now been completed for the year ended June 30 last:—

	Imports.	Exports.
Great Britain.. . . .	\$2,669,934	\$1,492,795
Canada.. . . .	3,669,098	1,611,480
United States.. . . .	3,447,359	1,394,289

while the total imports from all sources were \$10,426,040, on which the duties collected amounted to \$2,354,056 and the total of exports to \$12,101,161.

A comparison of these figures with those of the previous year show the following results:—

	1906.	1907.
Total of imports.. . . .	\$10,414,274	\$10,426,040
Total of duties.. . . .	2,319,986	2,354,056
Great Britain imports.. . . .	2,651,196	2,669,934
Canada imports.. . . .	3,521,939	3,669,098
United States imports.. . . .	3,609,192	3,447,359
Great Britain exports.. . . .	1,662,612	1,492,795
Canada exports.. . . .	1,777,169	1,611,480
United States exports.. . . .	1,278,997	1,394,289
Total of exports to all countries.. . . .	12,086,276	12,101,161

It will be noted from the above figures that Canadian trade increased \$147,159 while that from the United States declined \$161,833 during the same period.

The figures on the whole show that trade has been well maintained, and that the revenue from Customs duties has increased some \$34,000 over that of the previous year.

Later on when the returns have been printed and laid before the legislature, probably in February or March next year, it will be possible to go into the details of the figures given above, and so ascertain how far they affect the various items that go to form the total of Canadian trade with this colony.

E. D. ARNAUD.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., October 19, 1907.

THE COMPANIES ACT, 1907.

The New Companies Act, 1907, which will come into force on July 1, 1908, is too lengthy to embody in a report in its entirety, but several sections may be of interest to Canadian companies.

The Companies Act, 1900, provided for the disclosure in every prospectus of various matters calculated to influence investors, and in order to evade this obligation many promoters dispensed with a prospectus and sold large blocks of shares to the public through the medium of the stock exchange. Section 1 of the new Act prevents this by enacting that every company which does not issue a prospectus shall file a statement, signed by every director or proposed director, containing the principal particulars which, under the Act of 1900, must be stated in a prospectus, and also by bringing such company under the provisions of sections 2, 6 and 11 of the Companies Act, 1900. The three sections referred to compel the company to file the consent of a proposed director before naming him as such, to refrain from altering the terms of any material contract prior to the statutory meeting (except subject to the approval of such meeting) and to obtain from the Registrar a special certificate (based on a statutory declaration that the law as to minimum subscription, directors' qualification, &c., has been complied with) before commencing business or exercising any of its borrowing powers. They also require any director or proposed director named in a prospectus (this will not include a statement in lieu of prospectus) either to sign the memorandum for his qualification shares, if any, or to agree with the company to take up and pay for such shares.

'Private companies' and companies which have allotted any shares or debentures before the commencement of the Act are, however, exempted from the operation of this section, but the mere omission to issue a prospectus no longer classifies a company as 'private.'

ANNUAL MEETINGS.

The Companies Act, 1862, provided that a 'general meeting of every company under this Act shall be held once at least in every year' and meetings held on January 1 in one year and December 31 in the following year were in accordance with the Act. This is no longer possible under the new Act of 1907, the maximum interval being fifteen months.

AUDITS AND FILING OF BALANCE SHEETS.

Section 21 of the Act originally required every company in each year to file an audited statement 'in the form of a balance sheet,' summarizing its capital, assets and liabilities; but not necessarily including a statement of profit and loss. 'Private' companies, however, as defined by the Act are to be exempted.

WINDING-UP.

The Act provides that any liquidator appointed by a company in voluntary liquidation must file notice of his appointment within twenty-one days, and must also promptly call a meeting of creditors, who may decide whether or not an application shall be made to court for the appointment of another liquidator in place of or jointly with such original liquidator. Other clauses give the court power to suspend the dissolution of a company in voluntary liquidation after notice of the final winding-up meeting has been filed (at present a company is automatically dissolved three months after the registration of such notice), or to cancel a dissolution within two years of the event.

FOREIGN FLOTATIONS.

Every company registered outside, but having a place of business within, the United Kingdom (whether incorporated before or after the commencement of the Act) is compelled to file particulars substantially the same as the more important details filed by a British company, including an annual statement of capital taken up, &c., to mention the country of its origin in its prospectus (if any), and on its letter headings, bill heads, and other printed matter, and to exhibit its name and the name of such country on every place in the United Kingdom where it carries on business. The penalty for non-compliance is £50, or £5 per diem in the case of a continuing offence.

The recommendations of the company law amendment committee as to reducing the ad valorem duty on nominal capital from 5s. per cent to not more than 2s. 6d. per cent, payable in two instalments, and as to the codifying of the Companies Act, 1862 and 1900, are not carried out in the present Act; but the government proposes shortly to bring in a Consolidating Bill, which is to unite in one statute the provisions of the present Act and all the unrepealed clauses of the seventeen previously existing Companies Acts.

P. B. BALL.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(Mr. D. H. Ross.)

STOCK EXCHANGE BUILDING,
MELBOURNE, October 1, 1907.

THE AUSTRALIAN CUSTOMS TARIFF, 1907.

To-day (October 1) the Commonwealth parliament will commence the revision of the customs duties proposed in the new tariff which came into operation early in August. It is the intention of the government to take each item in regular sequence—from No. 1 to 444—and continue the final adjustment of the duties, without interruption of other business, until the tariff is completed. When the duties upon items of special interest to Canadian exporters are definitely arranged the superintendent of commercial agencies, Ottawa, will be advised by cable.

AUSTRALIAN IMPORTING TRADE DEPRESSED.

The uncertainty in regard to the duties likely to be imposed in the revision of the new tariff is exercising a depressing influence upon business throughout Australia. Large shipments of goods are being placed in bonded stores pending the adjustment of the tariff and the hope of importers that the increased duties may be somewhat modified. It is almost impossible to interest importers in any new line of goods at the present time. Under ordinary conditions, at this time of the year, the bulk of oversea orders have been placed and Melbourne manufacturers' agents report indents of only limited values being forwarded by this mail to Canadian exporters.

PRINCIPAL LINES OF AUSTRALIAN EXPORTS, 1906.

The leading values in the total Australian exports of £69,737,763 in 1906 are given in the following schedule:—

Wool.. . . .	£22,645,769
Wheat.. . . .	4,913,798
Flour.. . . .	1,216,849
Meats.. . . .	2,330,326
Butter.. . . .	3,240,063
Apples.. . . .	134,302
Wines.. . . .	97,683
Specie (gold and silver).. . . .	11,939,459
Bullion.. . . .	5,616,603
Ore and concentrates.. . . .	1,440,728
Leather.. . . .	562,291
Coal.. . . .	894,002
Hides—	
Cattle.. . . .	166,908
Horse.. . . .	1,589
Skins—	
Rabbit.. . . .	477,450
Sheep, with wool.. . . .	1,462,832
Sheep, pelts.. . . .	151,631
Other.. . . .	457,699

There has been an increase in volume and values of nearly all the items over the figures of the exports for the previous year. High prices ruling for the principal Australian staples had an important bearing upon the marked expansion in the Commonwealth's total trade last year.

INQUIRIES FOR CANADIAN AXES.

On account of the recent advance in prices of brands of American axes which are popular in Australia, advantage has been taken of the opportunity to supply importers throughout these states with the names of leading Canadian axe manufacturers who are capable of doing an export business. At the present time there is a scarcity of stocks of American axes in both Melbourne and Adelaide, and such a condition is likely to continue while manufacturers are so far behind in making deliveries. Now is the chance for new brands of Canadian axes to find a sympathetic market in Australia. A prominent Canadian axe manufacturing company has hitherto restricted the sale of their goods to one importing firm in each of the Australian states, but the wisdom of such an arrangement is open to serious doubt. Some trial orders for Canadian axes are going forward by this mail from Melbourne importers.

CANADIAN CORSETS IN AUSTRALIA.

After a determined and tactful effort made by the direct representative of a leading Canadian corset manufacturing company to introduce their goods—hitherto unknown—the line has recently been successfully introduced to Australian wholesale importers. Large initial orders are going forward by this mail to the manufacturers which reflects the excellent values offered in a line in which the competition is most marked. The satisfactory introduction of a new branch of Canadian corsets (there is at least one other Canadian make favourably known here) and the arrangements made for future business are attributable to the exceptional ability of the travelling salesman in overcoming the prejudices of conservative buyers.

CANNED SALMON.

Owing to reports having been received of the reduced catch of salmon in British Columbia and Alaska, business in canned salmon has been exceptionally active during the last month in Melbourne and other Australian importing centres. Quotations for sockeye were withdrawn by British Columbia packers in September and the c.i.f. prices on Red Alaska advanced 6d. (12 cents) per dozen cans. Some shipments from Vancouver have been re-sold several times, and there are indications that Australian prices will advance to such an extent as to make the retail price of canned salmon rather an expensive item.

ADVERSE HARVEST PROSPECTS IN AUSTRALIA.

According to the reports of meteorologists, there are strong indications throughout Australia that the exceedingly dry weather experienced the last few months will continue for some time ahead. It is no longer concealed that the country is in a very critical position with regard to the prospects of the coming harvest, but more particularly the wheat crop. The season has been remarkable in its general backwardness and shortage of rain. In some districts owners of sheep are travelling huge flocks to relief country where water and feed can be obtained, but already some losses of stock have been reported. So far as the state of Victoria is concerned, large areas of wheat are not expected to yield more than four or five bushels to the acre unless there is an immediate heavy rainfall. The mail closes with unaltered weather conditions and rather gloomy prospects for the coming harvest.

HIGH PRICES FOR AUSTRALIAN WHEAT.

The dollar limit has for some weeks past been exceeded for f.a.q. Australian wheat, and the mail closes with export rates at about 4s. 4d. (say \$1.05) per bushel free on board ship at Melbourne and other Australian ports. It is impossible, in view of a failure in the harvest, to obtain large quantities of the old crop at the price quoted, because holders anticipate a further advance. Some 3,000 tons of western Australian wheat have been purchased for export to South Africa. The mail closes with a firm market and prospects of higher prices ruling for the comparatively limited quantity available for consumption within the Commonwealth.

THE LUMBER TRADE.

Whilst building operations have recently been extensive throughout these states, the lumber importing business has received a considerable check through the increased duties imposed by the new tariff. Business continued on a restricted scale during September, buyers only operating for actual requirements. Stock in distributors' hands are becoming low and if the duties are modified large orders will undoubtedly be placed. Comparatively little spruce is held in Melbourne owing to the competition of Manchurian pine.

D. H. ROSS.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, October 1, 1907.

FIJI.

The report of the trade and commerce of the colony of Fiji for 1906 gives the trade for that year and three previous years as follows:—

Year.	Imports.	Exports.
	£	£
1903	489,095	554,707
1904	439,995	589,960
1905	442,852	706,403
1906	609,496	603,410

Eighty-seven per cent of the trade of the island is done with Australia and New Zealand, more than one-half of the imports coming from Australia and more than one-half of the exports going to New Zealand. The principal exports are sugar, copra and green fruit, New Zealand furnishing the market for sugar and green fruit, though last year New South Wales, in spite of the duty, took slightly more green fruit than did New Zealand. The exports of sugar were:—

1905..	£539,594
1906..	347,148

This decrease last year was owing to the drought of 1905, which compelled the closing of some of the mills for an unusual lengthy period in 1906. The value of green fruit and copra exported has very largely increased. The trade with Canada was:—

Imports..	£17,450
Exports..	20,237

The exports for 1905 were £51,488 12s., the decrease being due totally to the reduced export of sugar. I have no figures of the imports from Canada for 1905, but in 1904 the imports from Canada amounted to £12,210 14s. The trade slowly grows, but Canada as yet does but a percentage of what might be done. No details are given of the imports from Canada, but the exports to Canada consisted almost wholly of sugar, the value of which was £19,834 10s., the other items being bark, £383 17s.; bananas, £10, and jams, £7 13s., with one or two other trifling items.

The following are the imports with which Canada does some trade, but ought to do more:—

Article.	1906.
Bicycles..	£ 213 15 6

NEW ZEALAND TRADE CONDITIONS.

The exports of New Zealand for the year ending August 31 last, which is practically the end of one season and the beginning of another, have materially increased over those of last year. In quantities, wool shows an increase of $5\frac{1}{2}$ per cent, butter $4\frac{1}{2}$ per cent, cheese 68 per cent, mutton $4\frac{1}{2}$ per cent, lamb $14\frac{3}{4}$ per cent, and beef $74\frac{1}{2}$ per cent. The development of the cheese trade is rapid, being as follows for three years:—

	Cases.
1904-5.	61,985
1905-6.	90,021
1906-7.	151,396

Imports into the principal ports show an increase of about $18\frac{3}{4}$ per cent over those of the previous year.

UNITED STATES TRADE.

Cable advices state that the tariff has passed its third reading, but at the time of writing this paragraph the changes made in it since its introduction have not reached me. The preferential sections are not likely to be affected except in one or two lines, and hence a statement of the imports for such lines that were affected by the previous preferential tariff, and also those, by the tariff as introduced, will be instructive. The following are the lines affected by the preferential conditions of the late tariff:—

It will be seen that in the lines affected by the last preferential tariff, the decline in imports has been very considerable, particularly in bicycles and material, which have been reduced to exceedingly small figures. Boots and shoes have fallen away by one-half, canvas to one-fifth, fish to less than one-eighth below the importations of three years ago. In some of the items the preferential tariff covered only a portion of the lines embraced and the decline, therefore, was not so marked. It is probable that a similar reduction will be made in the lines newly affected by the tariff of this year, and the Canadian manufacturers must determine whether the decline shall go to them. As soon as the tariff is finally passed, and I have received a copy of it, fuller particulars of the trade to be done in the lines included in the preferential tariff will be given.

AUSTRALIAN WEATHER CONDITIONS.

Since June there has been but a small rainfall. What has fallen has been on the interior slopes and pastoral sections. The costal areas, including the dairying districts, have been very dry. There is a possibility of a harvest of moderate extent should good rains speedily come. In no case can there be a crop equal to that of last year. The prospects are against early rains. Already the pastoral country has been affected and stock has been pushed into the market for sale on account of the lack of feed. The reduction in the price of metals and the decreased yield of gold are also having their effects upon trade. The latter part of the year is not likely to be as favourable for imports as the first half.

WOOL.

The wool sales have opened very favourably to the seller. There is a keener competition for wools that will spin to 60's and over than was the case at the opening sales twelve months ago. While it is possible that the crop will be equal to last year's in quantity, there is no possibility that it will equal it in quality, and hence the demand for good high grades.

DUTY ON TRADE PUBLICATIONS.

Under the existing tariff 6d. per pound is levied upon magazines, one-fifth of whose contents is advertising matter. Canadian trade journals are included amongst the magazines. Where single copies have been mailed they have been allowed to pass, but when packages, in which two or more are included, have been sent, the duty has been demanded before the delivery by the post office authorities. In some cases the receiver has refused to pay the duty, and the publications have been destroyed.

GLASSEY KID.

I am informed that in November next the United States government will put into operation regulations which will prevent the introduction of sheep skins from Australia. The consequences, it is anticipated, will make this raw material more expensive to the United States tanner. Under these conditions, the Canadian tanner, with cheaper raw material, should be enabled better to compete for the trade in glassey kid, of which large quantities have come from the United States.

AUSTRALIAN SISAL.

The high price of fibre has induced the experiment of growing sisal. Plants for the purpose have been imported from Mexico. It is claimed that large areas of this country are better adapted to the production of this fibre than for any other purpose, and that it can, even with the high price of labour, be grown profitably. Should the experiment prove successful, the whole product, for a very considerable time, will be consumed in Australia. It may be, however, that later there will be quantities to export.

TREATMENT OF ALKALI SOILS.

The water for many of the artesian bores is highly mineralized. This has prevented the hoped for advantage expected to be gained by using these waters for irrigation purposes. Experiments have shown that if this soil could be treated with a limited quantity of nitric acid, it would turn the injurious alkali into soda nitrate, which is such a valuable fertilizer. It has been proposed to use the force of the water from the bores to drive turbine wheels for the purpose of producing nitric acid from the atmosphere, as is done in Norway. The whole problem turns upon the commercial possibility of this being done, of which there is very great doubt. Had Australia the water powers of Norway or Canada available for the cheap production of nitric acid, no doubt a transformation could be made in the alkaline waters and soils of the country.

POTATOES AND COOL STORAGE.

With a view of the possibility of exporting potatoes to Great Britain, the government of the state in April, 1906, put a quantity of Early Rose potatoes in cool storage. They were opened last week, and according to reports appear to be as fresh as when put in and to have the qualities of new potatoes after thus being stored for eighty-two weeks. It is believed that shipments to England in cool storage will form a favourable market for the surplus potatoes of Australia in time of glut.

THE COMMONWEALTH TARIFF.

It was announced last week that the House of Representatives would go into committee to consider the tariff to-day, but some doubts are expressed if the general debate upon the budget may not be re-opened, though formally closed a week ago. If so, it will delay consideration of the items for some little time longer. As it is believed that some of the duties will be scaled down, trade is much affected by the uncertainty prevailing, and orders for future shipments are being held over.

PRICES.

The apprehension of a drought is forcing considerable numbers of stock into the market, and prices have been reduced materially. Yesterday some Merino ewes were sold at 4s. each. They were, of course, in poor condition, but carried wool. A little time ago sheep in a little better condition would have been worth three times the money, indeed, were sold up to more than five times that value. It is possible that sheep skins will follow the price of sheep. They have been maintained at a very high figure, but the probability is that the next auctions will see some reduction in prices in any but the very best wool skins. Hides also show irregularity, though good quality is firmer, but light weights and inferior quality are lower. Furs show some indication of a decline as do rabbit skins, the market in England latterly having been unfavourable.

J. S. LARKE.

TARIFF CHANGES.

MAURITIUS.

I.—AN ORDINANCE TO AMEND ORDINANCES NOS. 29 OF 1895 AND 17 OF 1901 (CUSTOMS TARIFF).
(No. 5, assented to 2nd July, 1907.)

Be it enacted by the Governor, with the advice and consent of the Council of Government, as follows:—

1. The following item is added to Schedule B of Ordinance No. 29 of 1895:—

	Rs.	Cts.
75 (a) Hessian cloth, when imported for the packing of hemp... Per 100 yds.	0	60
2. Item 96 of Schedule B to Ordinance No. 29 of 1895, as replaced by Ordinance No. 17 of 1901, is repealed and replaced by the following:—		
96 (i) Machinery or apparatus, by whomsoever imported, for the manufacture of sugar, rum, aloe-fibre, or for the preparation of tea, vanilla-pods, or of any such other produce of the Colony which may be added to this item by proclamation of the Governor in Executive Council... Per 1,000 kilos	1	10
(ii) Parts of machinery or apparatus, when imported by or on behalf of the local manufacturer or the owner of a mill, for the manufacture of sugar, rum, aloe-fibre, or for the preparation of tea, vanilla-pods or of any such other produce of the Colony which may be added to this item by proclamation of the Governor in Executive Council... Per 1,000 kilos	1	10
“ “ when the crane is used... “	2	10

3. This Ordinance may be cited as “The Customs Tariff (Amendment) Ordinance, 1907.”

II.—PROCLAMATION NO. 15, OF JULY 10, 1907, ISSUED IN PURSUANCE OF “THE CUSTOMS

TARIFF (AMENDMENT) ORDINANCE, 1901.”

Whereas it is enacted under item 99 (iii) of Schedule B of Ordinance No. 29 of 1895 as replaced by article 1 of Ordinance No. 17 of 1901, entitled “The Customs Tariff (Amendment) Ordinance, 1901,” that substances when imported for use in local manufactures may, by Proclamation of the Governor in Executive Council, be added to the list of substances included in such item 99 (iii);

Now, therefore, in virtue of the powers vested in me by the aforesaid Ordinance, I do hereby declare that I have, at a meeting of the Executive Council held on the 28th June, 1907, added the following substance to item 99 (iii) of the aforesaid Ordinance, viz.:—

HYDROSULPHITE POWDER
(also known and invoiced as BLANKIT.)

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c. and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.c.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent also for New Zealand.
D. H. Ross, Stock Exchange Building, Melbourne.

BRITISH WEST INDIES.

E. H. S. Flood, agent also for the Bermudas and British Guiana.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Club Hotel, Yokohama, Japan.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

F. B. Ball, Rooms 39 and 40, Central House, Birmingham.

J. B. Jackson, cor. of E. Parade and Greek Streets, Leeds.

P. B. MacNamara, Canada Chambers, 36 Spring Gardens, Manchester.

W. A. MacKinnon, Sun Buildings, Clare Street, Bristol.

JAPAN.

Alex. MacLean, No. 14 Bund, Room B, Yokohama.

MEXICO.

A. W. Donly, Apartado, 91B, Mexico, D.F.

NEWFOUNDLAND.

E. D. Arnaud, Gazette Building, Water Street, St. John's.

SOUTH AFRICA.

John A. Chesley, Rhodes Buildings, Cape Town, Cape Colony.

CANADIAN COMMERCIAL AGENTS.

BRITISH WEST INDIES.

E. A. H. Haggart, Kingston, Jamaica.
E. Bryson, St. John, Antigua.
S. L. Horsford, St. Kitts.
Edgar Tripp, Port of Spain, Trinidad.

CHINA.

H. J. Craig, 18 Szechuen Road, Shanghai.

NORWAY.

C. E. Sontum, Grubbejd, No. 4, Christiania, Norway, agent for Sweden and Denmark also.

CANADIAN HIGH COMMISSIONER'S OFFICE.

GREAT BRITAIN.

W. L. Griffith, Secretary, 17 Victoria Street, London, S.W., England.

Harrison Watson, Canadian representative, City Trade Branch, 73 Basinghall Street, London, E.C., England.

CANADIAN IMMIGRATION AGENTS.

BELGIUM.

D. Tréau De Cœli, 29 Rue de Souci, Antwerp.

FRANCE.

Paul Wiallard, 10 Rue de Rome, Paris.

GREAT BRITAIN.

J. Bruce Walker, Assistant Superintendent of Emigration, 11-12 Charing Cross, London, S.W.

A. F. Jury, Old Castle Buildings, Preeson's Row, Liverpool.

G. H. Mitchell, 43 Cannon Street, Birmingham.

H. N. Murray, Exeter.

L. Burnett, York.

John Webster, 35-37 St. Enoch Square, Glasgow.

John McLennan, Aberdeen.

E. O'Kelly, 17-19 Victoria Street, Belfast.

JAPAN.

REPORT OF TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND,
YOKOHAMA, October 15, 1907.

DELAYING FREIGHTS.

Can cargo, shipped to go by a certain vessel, be shut out and taken on by another vessel, of the same line, sailing subsequently, the vessel owners not being liable for the delay and consequent damage incurred? This is the issue raised in an action brought against the Hansa (German) line of steamships and their agents at Calcutta. The case was before the bench on the application of the defendants to have the case transferred to a higher court. Counsel for the application said the important question involved was, whether a shipping company, when freight was booked to go by a certain ship, were bound to take it by that ship, the time of sailing being stipulated in the usual way. The plaintiff's case was, that the goods in question were for May shipment to London, and that the company were bound to take the cargo by that steamer provided it was delivered to them on their wharf by May 31. The defendants' case was that they were not so bound, if there was not space on that particular steamer, and in this case the goods were shipped by a subsequent vessel on June 8, or one week later; they therefore denied liability. His Lordship considered the case of sufficient public importance, although the damages claimed were small, to send it to a higher court.

AN INNOVATION.

In Japan railway tickets are sold only at the railway stations. The passenger must be there in time to get his ticket or he cannot go. In spite of a general official dubiousness about risk, and irregularity, this time-honoured rule is to suffer an experimental variation. A leading hotel in a well-known city, where tourists do mostly concentrate, it is announced, 'will shortly receive permission to sell railway tickets.' This 'will establish a precedent,' so that the rule will no longer stand in the way; and, it is expected, 'will be greatly appreciated by foreign tourists.' The next step doubtless will be the taking of the best city corner locations for railway ticket business.

DECLINE OF JAPAN TEAS.

It has been claimed in Japan that owing to the competition of Ceylon and other foreign teas, a gradual decline has been shown in the Japanese tea market of late years. This is borne out by the figures showing the annual value of tea exported during the past seven years.

One cause for the decline is attributed to the competition with teas which have farther to travel to get to the United States, but which by systematic advertising have succeeded in crippling the Japan tea trade to some extent. There are other considerations, says the *Kobe Chronicle*, 'it is a noteworthy fact that the decline in the trade has been coincident with the endeavour made to confine the trade to Japanese hands by means of direct export. Without going over old ground at present, it may be admitted that the increasing activity of the agents of Ceylon tea in America has something to do with the falling off in the export of Japan tea.' This, doubtless, more than any falling off either actual or relative in point of merit.

The remedy would seem to be for the Japanese tea guilds to invite the co-operation of foreigners with a view to meet the competition of Ceylon with similar methods, that would in their turn bring the advantages of the Japan product before the people of America.

FLOUR IN THE FAR EAST.

An Australian journalist, travelling in China and Japan, points out that 'in a Hong Kong paper it is stated that the steamer *Empress of Japan* had arrived with a cargo of Manitoba flour for Hong Kong, and that a five-million-dollar order had been placed by a Japanese concern with the Hong Kong Milling Company. It is stated that the reason for the shipment of flour from Canada was not altogether famine conditions in China, but that supplies of wheat from Pacific coast states had been reduced to a minimum, and there was practically no more available for export. With reference to the five million dollar order from Japan, Japanese papers indicated that the state of the flour market in Kobe underwent a change last year. When flour milling was in prospect in Japan during the latter part of 1906, importers of flour postponed issuing orders except for pressing demands. Since then the importation of American flour had been affected by the Chinese boycott. The crops in China were last year largely a failure, and this created a demand for flour, and further affected stocks in Japan.

'Several Australian merchants have been trying to introduce their flour. It is alleged that Australian flour is not sufficiently strong in gluten. The Chinese want a flour rich in gluten rather than rich in starch. Strength is the test for the Chinese purchaser. He does not care for whiteness; in fact, a darker flour more readily suggests strength than does a white starchy flour. The Chinese trade uses the bulk of its flour for manufacture into flour strings, a sort of macaroni. I have seen these strings, thirty and forty feet long, suspended upon racks for drying. Naturally, a flour rich in starch would not produce a good string. The merchant here buys what in California is known as superfine flour. The flour produced by the Washington mills seems to be better adapted to this market than any other at present coming here. There is some Japanese-made flour being imported into Formosa. It seems to be the product of the Nagasaki roller mills, from American imported wheat. Owing to the increased duty upon foreign manufactured flour, the Japanese product may extend its trade very materially. It may not be many years until the Japanese mills draw upon Manchuria for their wheat.

'As the Manchurian wheat is raised under conditions similar to those of the state of Washington, and is strong in gluten, it is well adapted to the Chinese trade. But, even after the much-talked-of Harbin flour mills are in full operation and after the fields of Manchuria are producing all the wheat they can, there will still be demand for American-made flour. The increasing consumption will certainly allow for enormous increase in the production.'

There is a tendency in the Orient, not quite unknown elsewhere, when talking of quantities, to unduly magnify. Such statements as that of the five-million-dollar order from Japan to the Hong Kong mills, as well as the frequently met with reports of ship loads away up in the thousands of tons, from Vancouver, experience teaches should always be turned over and looked through before using. In other respects, the foregoing newspaper report is interesting and credible. The fact is that California, Oregon and Washington flours, however described, are practically on a level as to quality, all deficient in gluten compared with Canadian flour. Every dealer of any note knows that Canadian flour has the quality that would make its sale easy in this market and on the Asiatic mainland. But unfortunately it has the price that counteracts the going effect of the quality.

THE NEW JAPAN—THE NORTHEAST.

Attention is being directed to the northeastern part of this country, which heretofore has been very much unknown, excepting to those who are native to it, or have

business relations with the people. The Northeastern Industrial Association, as the title indicates, was formed for the purpose of promoting some measure of knowledge respecting the capabilities of the northern mainland and island, and of forwarding such industries as may be found suitable, and as a necessary incident encouraging immigration from the overpeopled sections. The *Japan Times* reports a periodical meeting of this association at Sendai, a large industrial town in the northeast, at which there were in attendance over a thousand industrial representatives, speaking for twelve branches of industry: agriculture, sericulture, stock-farming, dyeing, lacquering, forestry, brewing, metal-work, fruit-raising, marine products, tobacco and soy. All these are being promoted in the northeast, and since these indicate the productions of the south and west it follows that the whole country may produce those staples that heretofore have not extended beyond the limits of what they regard here climatically as the temperate zone. The 'North' has terrors for the Japanese, just as it has had for some people when they looked to Canada, but in both cases the fear is due to unacquaintance, and is passing away.

Mr. Matsuoka, Minister of State for Agriculture and Commerce, was in attendance, and spoke at length on the subject of industry in the northeast. He condemned as a radical fallacy the belief that the northeastern districts are too cold in climate and too sterile in soil to be suitable for rice culture and other of Japan's productions, and contradicted the idea entertained by some, that the people of the northeastern provinces ought to supplant the ill-paying rice-cultivation by some other branch of industry. Rice cultivation was an industry of so long standing that it was impossible to change from it without serious consequences. Mr. Matsuoka said that there are evidences nowadays of civilization steadily finding its way into cold regions, and exhorted those present to inculcate a spirit of diligence in the people of the northeast, so as to counteract natural drawbacks. He suggested the profitableness of rearing cattle and poultry and of the expansion of such industries as sericulture, forestry, minerals, &c.

JAPANESE ENTERPRISE.

Mr. S. Takashima, representing Messrs. Nozawa & Co., a Japanese exporting and importing firm, reports to this office the arrival of sixty head of cattle, mostly cows, all pedigree registered, selected by him in Canada, and purchased for the government experimental farms. This shipment came via Canadian Pacific Railway to Seattle, thence by the Japan Steamship Company's line to Yokohama. Doubtless, as is too often the case, if not as usual, the Canadian identity will be lost and the statistics of 'American' export will gain accordingly. The cattle were bought mostly from Eastern Townships farmers. Pedigree cattle, for stock improvement purposes, are carried when a few in quantity, at half ordinary rates, and by the carload at less than half. About the practicability of doing a trade in beef cattle from the Canadian ranches, he said the ordinary tariff rate would not admit of it; but that slaughtering in Canada and transportation with cold storage should be practicable from Canada, since the Australians had demonstrated what could be done in that way.

Mr. Takashima had just returned from a business prospecting tour of three years, taking in France, Belgium, Germany, Australia, England, United States, and Eastern Canada. And he is only one of many Japanese who are now trade-prospecting the producing countries of the world.

INCREASE OF SILK CROP.

According to the report of the Agricultural and Commercial Department, the estimate of silk worm for the summer season shows an increase of 15.2 per cent as compared with the output of the corresponding season last year, while the estimate for this autumn season stands at about an increase of 8.6 per cent compared with the output of the previous year. Though the somewhat untoward weather and incidental floods in August and September have proved unfavourable, the crop of cocoons through summer and autumn is estimated at an increase of 11.4 per cent compared with the total yield of last year.

INCREASING MINERAL PRODUCTION.

Twenty years ago the annual output of mineral products of this country hardly exceeded 10,000,000 yen. During these two decades the mining industry of Japan has made remarkable progress. At the end of last year the value of its total yield was over 100,000,000 yen. The total value in yen is distributed as follows: Gold, 3,790,000; silver, 3,230,000; copper, 26,300,000; lead, 430,000; iron, 2,190,000; coal, 63,360,000; sulphur, 6,000,000; petroleum oil, 3,840,000, and other minerals, 480,000. The total stands at 104,270,000 yen (1 yen = 50 cents).

A. MACLEAN.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

(Mr. W. A. MacKinnon.)

SUN BUILDING, CLARKE ST.,
BRISTOL, ENG., October 31, 1907.

DISPOSAL OF GARBAGE.

The current number of *Chambers Journal* describes an ingenious machine, which has been devised and is now being experimented with by one of the London borough councils, to 'turn garbage to a more profitable account in a hygienic manner.' This apparatus combines the three operations of disintegrating, pulverizing, and mixing in one. The assorted garbage is discharged into a hopper, through which it falls into a small compartment in which revolve four fifty-pound hammers at a speed of 1,250 revolutions per minute. This is equivalent to 5,000 strokes for a cumulative weight of over 250,000 pounds per minute, irrespective of the impetus produced by the centrifugal force of the machine.

RESULT OF THE PROCESS.

Under this treatment the incongruous mass of rubbish and filth is turned out of the machine in one operation in the shape of a uniform black mould. Bottles, ashes, slates, vegetable refuse, and other garbage are completely reduced to powder in the apparatus, and so assimilated and intermixed as to constitute a new substance of great value. It is claimed that the plant occupied little space, and can deal with about five tons of garbage per hour, thus rendering the operation very cheap. It is also claimed to be entirely hygienic, as there is no dust, smoke, or noisome effluvia.

THE PRODUCT.

The manure thus obtained is said to be entirely odourless and extremely valuable as a fertilizer. There is naturally a keen demand for such manure, and it is stated that the municipality where this destructor is in operation obtains substantial profits from the sale of the product.

AUSTRALIAN BUTTER FOR BRISTOL DIRECT.

Now that the trade of the port of Avonmouth occupies so prominent a place, it is interesting to note that the first steamer to sail direct from Australia to Avonmouth

with shipments of butter, is now on her way. The ss. *Devon*, which is specially equipped with refrigerators, left Melbourne on October the 10th with a large consignment of superfine Victorian butter, and is due at Avonmouth on December 3. Another steamer, the *Nairnshire*, now at Sydney, will follow.

THE SOUTH WALES COAL TRADE.

A correspondent in the Financial and Commercial Supplement of *The Times*, points out that there are now signs of a change as regards the 'boom' in Welsh coal. The chief feature of the situation is a deadlock as regards future supplies. Shippers are insisting upon a reduction of from 2s. 6d. to 3s. 6d. per ton, which characterizes the present prices for best admiralty coal, as compared with August figures; sellers on the other hand, are holding out for higher prices, claiming that the present lull is purely temporary, and sure to be followed by a revival of the strong demand which caused such a rise during the past summer.

THE FOREIGN DEMAND DECIDES.

The foreign demand has been chiefly responsible for higher prices; whether this demand will be continued or not depends largely on the political situation. Should an important war break out it will no doubt be continued, and probably increased. If on the other hand, no such disturbance occurs, the prospects are that German competition will increase in French and other markets, so that Welsh coal will have to make concessions if it is to retain its present share of the trade. Should this come to pass we may expect a gradual but somewhat persistent decline in prices.

APPLES.

The following quotations received this week from Liverpool will be of interest to Canadian exporters:—

	Boston and Maine.		New York.		Canadian.	
	s.	d.	s.	d.	s.	d.
Baldwins.	16	9 to 18	6	15	6 to 17	6
Greenings	14	0 to 15	0	13	6 to 15	9
Kings.	18	0 to 21	6	18	0 to 21	0
					19	9 to 26
						0

The Canadian trade will no doubt be familiar with similar quotations, but what I wish to point out is that, taking the only three varieties common to all on the list, the result as above shows that 'Canadians' have in every case a decided advantage, this amounting as regards 'Kings' to 4s. 6d. and 5s. These figures afford both an explanation and a justification of the action recently taken by American pomological authorities in requesting that a system of grading and inspection, similar to that in Canada, be enforced by the United States government. It is evident that Canadian growers have no cause to regret their action in demanding and supporting a rigid inspection of fruit destined for export.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., October 29, 1907.

SMOKED SALMON.

In looking over the various exports from Canada, I find that the quantity of smoked salmon exported to Great Britain is practically nil. From inquiries made among fish dealers here there would appear to be a very good chance to enlarge this trade between the two countries. Taking into consideration the price that is paid in Great Britain for smoked salmon, 3s. 6d. (86c.) to 5s. (\$1.25) per pound retail, there seems to be left a large margin of profit. By bringing this article to a reasonable price, say 2s. or 2s. 6d. (48c. to 60c.) per pound, the trade could be enormously developed. As the prices are at the present time only the wealthier classes can purchase.

Fresh salmon in Great Britain at its lowest (and then only for a few days) is 1s. 6d. (37c.) per pound, and it is very rarely sold under 2s. 6d. (60c.), and from that to 3s. 6d. (86c.) per pound. Considerable trade has been developed between the two countries, and from what the dealers here say who are large handlers of Canadian fresh salmon, it is very satisfactory.

It may be that the salmon as smoked in Canada is not exactly as used here, but there will be no difficulty in ascertaining the particular method of curing desired by the people of Great Britain.

TRINIDAD AND TOBAGO.

REPORT OF COMMERCIAL AGENT.

(Mr. Edgar E. Tripp.)

PORT OF SPAIN, TRINIDAD, October 29, 1906.

CACAO.

Since the raising of quarantine, business generally has been much brighter. Added to this the very considerable rise in the value of cacao, which will mean if it is maintained, an extra profit to the planters of nearly a million sterling, makes the present outlook satisfactory. It is true that the market price of sugar leaves but little over the cost of production, but the arrangement to extend the Brussels' Convention until 1913, lends a stability to the industry that had been much shaken of late, and crop operations are being vigorously proceeded with. Some fear is expressed that, owing to recent events, the Canadian market may not prove so good as during the past year or two, but planters on the whole are hopeful.

TRADE RETURNS.

Official returns for quarter ending September 29, show that trade with the Dominion is being fairly maintained and, in some respects, improved. Bread, of which an excellent quality now reaches us, is steadily making its way. The imports rose to 800 barrels for the quarter, not very much, it may be said, but still more than during any similar period. Nearly 6,000 lbs. of cheese came, only 1,800 lbs. less than the whole of last year, while the import of flour was 500 barrels over corresponding period in 1906.

NEW MAIL SERVICE.

A new mail contract has been entered into for ten years with the Royal Mail Steam Packet Company for the conveyance of the intercolonial and European mails fortnightly. Barbados will be the headquarters. The ocean boats of the line are scheduled to call at this port, but the colony does not contribute to the subsidy.

EDGAR TRIPP.

BIRMINGHAM.

REPORT OF COMMERCIAL AGENT.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., November 8, 1905.

GREAT BRITAIN'S WOOL PRODUCTION.

A report issued by the board of agriculture on the production of wool in Great Britain during 1905 and 1906 shows that the total average wool clip for the two years was 133,088,000 lbs. and the imports 360,000,000 lbs., so that home producers were responsible for only about 27 per cent of the total. As to prices the rock-bottom was touched in 1902 when the average was 6½d. (13 cents), but by 1906 values advanced to 13d. (26 cents).

The question of the preparation of wool is dealt with in one chapter of the report. When wool prices were low, washing was very little practised, but with the improvement in the trade more attention was given to this point. Even in times when prices are high washing seems to be in favour amongst breeds which produce wool of high quality, such as the down and lustre wools. This is seen in a table compiled from returns by certain buyers of wool bought by them in 1905 and 1906. In this table some seventy-three thousand Shropshire fleeces are returned as washed, about eleven times the number of unwashed. The washed fleeces averaged 5½ lbs. in weight, and the unwashed 8½ lbs. Several of the long-wool breeds, such as the Dartmoors, Devon Long-wools, Lincolns and Leicesters, are credited with almost identical clips of 14 lbs. for sheep other than ewes. Among the short wools, Ryelands, the Herefordshire breed with 7.75 lbs., Oxfords with 7.5 lbs. and Shropshire with 7 lbs. are credited with the biggest yields. So far as counties are concerned those in which the long-wools are prevalent naturally shows the biggest fleeces. Gloucestershire which probably carries a bigger variety of pure-bred sheep than any other, averages 5½ lbs. for ewes and 7½ lbs. for other sheep, and Shropshire is credited with similar figures. The county with the smallest average is Sussex where the small Southdown is the prevailing breed, the yield being 4 lbs. and 5 lbs. for ewes and other sheep respectively.

SMOKELESS COAL.

What is considered to be one of the greatest discoveries in Great Britain recently, is the discovery of a method to produce smokeless coal. The discovery has been made by an eminent British engineer, and he has given to his discovery the name of 'coalite.' The object of the inventor, Mr. Thomas Parker, when making his experiments, was not only to abate the smoke nuisance, but also to effect a large saving in coal consequent upon the possibility of burning the smoke. Many experiments have been made from time to time, some of them effective but costly, but only in the case of factories to abate the excessive smoke. 'Coalite,' however, can be used in dwelling houses, and it is believed that smoke will be a thing of the past.

THE NATURE OF COALITE.

'Coalite' is described as a completely combustible coal. It is ordinary coal so treated that it cannot emit smoke—the smoke-forming constituents having been eliminated. It is easily ignited and may be consumed in any grate, stove, furnace or kitchen range. It does not emit any noxious or injurious fumes, and is equally pleasing in appearance. And it is considerably cheaper in use.

'Coalite' is not coke, and is obtained in an entirely different manner, the temperature at which it is formed being nothing like the white heat to which ordinary gas retorts are subjected. The result is that the constituents of which illuminating gas is composed remains behind in 'coalite' to a remarkable degree. It is claimed for the fuel that no less than twelve per cent of its waste consists of volatile flame-producing matters. The plant used in preparation of 'coalite' is entirely different from that used at present in gas and coke manufacture. The stills are automatic and continuous in their action, and the coal fed in at the top emerges as coalite at the bottom. As the apparatus undergoes no destructive high temperature the wear and tear is small, and the perpetual renewals common in gas-making practice are rendered unnecessary. In the production of 'coalite' results are encountered which must lead to an economic reform. The effect of the gentle distillation of coal in the preparation of coalite is that a gas is evolved of superb quality—over twenty candle power—approximating to the illuminating power of acetylene. As the process does not break down the hydrocarbons, almost a double quantity of valuable liquid by-products is obtained.

A NEW INDUSTRY.

It is intended to open factories all over the United Kingdom, and consequently there will be a new and large industry. A large site has already been purchased in a central situation on the banks of the Thames, with a frontage of over a mile. The patent has been registered all over the world, and a company is now being formed with an adequate capital to take over the British rights.

If any Canadians would be interested in this matter, I shall be glad to give them any further information in my possession.

P. B. BALL.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

(*Mr. Alexander MacLean.*)

ROOM B, 14 BUND,

YOKOHAMA, November 28, 1907.

THE OUTLOOK IN CANADIAN FLOUR.

Information, sought by this office, from wheat and flour exporting sources in Canada, as to the outlook for export to the orient presented by the conditions at the close of harvest:—

A British Columbia milling company, whose flour I saw for the first time a few days ago being carted to warehouse in Yokohama, say under date September 30:—

‘Threshing operations are now getting in full swing, and the big movement will be on in about fifteen days. From present indications it would seem that the Northwest will have about 75 per cent of the amount of wheat they had last year, 25 per cent of which will be high grade milling wheat, and the balance frosted. Alberta should have from three to four million bushels of wheat to export, all or the greater part of which will be frosted. An advance in values to the extent of 15 cents per bushel has taken place within the last thirty days, and speaking off-hand it would seem that the prospects are unfavourable for business on account of the high values which now exist here. On the other hand, the frosted wheat still retains the greater part of its strength and bread-making qualities; and, being purchased at quite a large discount, may be handled at such a value as will permit its importation into your territory. It is our intention immediately, with samples, to take the matter up with some of your merchants, and we will without doubt very quickly ascertain whether business will be practicable or not. We shall advise you further, in this matter, immediately we have more definite information in hand.’

Another British Columbia milling company say, date September 2:

‘We beg to advise you that at present reports are very bad for the crop in Alberta, Saskatchewan and Manitoba, and cash wheat, One Northern, has closed to-day at \$1.05½. Almost every one interested is considerably at sea as to just how to size up the market, and largely of the opinion that wheat prices will range high this season, but we sincerely hope not so high as to discourage oriental business.’

A British Columbia commission firm, well informed as to the orient and its peculiarities, say, date September 26:

'We are unable to give definite information at this moment owing to the fact that not one-half of the crop in the western provinces has yet been harvested, and it is doubtful whether a great deal of it ever will be. In consequence of the late spring, harvesting has been from two weeks to one month later than in ordinary years, and as a result many sections have been caught by early frosts, which in some cases will result in a total loss; and in many others the damage will make it totally unfit for milling purposes. It may be that considerable of this quality, while unfit for milling in this country, may be offered for export, providing it proves suitable for the markets of China and Japan. We have had one or two inquiries from Japanese correspondents for Canadian wheat, and are writing them by this mail advising that it will be impossible for us to name them offers or submit samples for another ten days, by which time a better idea as to the crop and outlook will be obtainable, and just as soon as we have any definite information along this line, we will be pleased to lay same before you.'

Another British Columbia commission merchant, date September 30, says:

'I don't see how any Canadian exporter could ship wheat or flour to Japan this year except at considerable loss. I have had a standing order from Hong Kong for the last six months for 4,000 barrels to be shipped by every Empress steamer, and a letter of credit from the Hong Kong and Shanghai Banking Corporation to draw against shipping documents, but the price is limited, and I have never been able to purchase within the limits, and wheat is considerable higher now than six months ago. Wheat is now quoted in Winnipeg at 97 cents to \$1.03½, and more than one commercial paper has predicted that \$1.25 will be obtained before midwinter. It may be the market is excited and forced up beyond its value by speculators, plungers and gamblers, and that there may be some reaction later on, but I cannot hear of any one who expects wheat to be as low as last year. I expected to commence business this autumn with a Manchurian company, they having requested me to make them a sample shipment, but I see no chance this year and am writing them by this mail to that effect. At the present time wheat appears to be dearer in Canada than in any other wheat growing country in the world.'

From Alberta, a milling company interested in the Japan and China trade, under date September 27, say:—

'Conditions are not favourable for much business at this time for the reason that there are large stocks of flour in both Japan and China purchased at a low price, and until those stocks are worked off we look for no change or advance in the price of flour in the orient. We have sold 20,000 quarters of flour for Hong Kong, half September shipment and half October, but this wheat was bought at a low price which enabled us to obtain a small profit on these two particular shipments. We are receiving firm offers from Hong Kong, but quite out of line in accordance with the price of wheat.'

Re crop conditions in Alberta:—'We had a heavy frost in August which caused a damage of at least 30 per cent to the grain. Following the frost, we had heavy rains and snow to the depth of from 4 inches to 18 inches with 50 per cent of the crop uncut, which caused a further damage. After the snow disappeared we had another frost which did more damage to the crops, and at this writing there is 30 per cent of the crops uncut in Alberta.'

A Saskatchewan milling company under date September 16, says:

'The wheat crop has unquestionably been severely damaged by frost in many localities although we are pleased to state no frost damage has occurred in our immediate vicinity. Owing to the partial failure of the winter wheat crop in the United States, and to the poor outlook for their spring wheat crop, as well as to the shortage in several of the European wheat countries, wheat prices are exceedingly high for this period of the year; and we are inclined to think that the only flour trade that it may be

practicable to carry on with Japanese buyers will be for the lower grades. We are making arrangements with a view of offering a quality of flour, to the Japanese trade, which we understand is in demand there, and will mail sample to you, or to buyers whose names you favour us with, at the earliest possible date. We intend to make an effort to supply some of this trade.'

A British Columbia commission firm write, dated September 30, of the present impossibility of active movement or prospect of business in flour with the orient. They quote from their Hong Kong correspondent, dated August 31, as follows:

'We inclose market report just received from Hong Kong. You will notice that prices there are actually lower than here; and that great distributing point, being so near Japan, must influence prices there. Since our last market report of July 31, our market has dragged along on its weary course, and prices are maintained solely because of the high values ruling in Australia and America, and in the event of lower American quotations our market would experience a sudden collapse. Stocks are now 74,000 bags Cal., 450,000 Wash. and Ore., and 500,000 bags Australian. Our market cannot recover until the large Australian stock has been placed, as this has already been paid for by dealers. The quality has deteriorated to 20 to 25 per cent gluten, which accounts for the indifferent demand, and when the Australian mills re-enter our market next year they will not obtain better prices than are paid for Ore. and Wash. export brands.

'As to future business, our dealers do not think they will be able to offer present American values for several months to come, but it all depends upon the stocks in North China, Siam, Indo China, and the Straits. With small stocks, those countries would soon be attracted by the low prices ruling here, and clear out stock within two months, in which case our dealers would be in the market for October and November shipments.'

From Manitoba, regarded here as it is there, too far from the Pacific coast to take seriously the export of much flour to this country the information to hand has reference to the probabilities as to the harvest yield and market price. Manitoba flour is too high for this market, and the percentage of low grade so limited that it finds market at home. There is therefore no present expectation that Manitoba flour, at its general price, will be wanted here.

One Manitoba milling company, under date September 14, says:

'We here—in Manitoba—are too far east to hope to do anything worth while with either China or Japan, except in low grade flours, which only means 5 to 10 per cent of the product of our wheat—the other 90 to 95 per cent must find a market elsewhere for at least many years to come. Our wheat commands too high a price here, and in the world's market generally, to allow of it or any great part of its product to be shipped to your market. China and Japan buy their flour requirements on a basis of colour and price; our wheats and flours are sold on basis of strength and quality. It will take years—or more—to make any material change in these conditions, some of the reasons therefor being as follows:—

'The masses will have to attain higher earning powers before they can buy high-priced goods.

'The strong determined opposition of west coast American mills, west coast Canadian mills, and middle-west Canadian and American mills, whose milling lives depend on their holding the markets of the orient.

'Established usage of soft white flours, pleasing to the eye and suitable to the purse.

'We were the first Canadians, in the field of both China and Japan flour markets; we had a traveller for China and Japan. We sent two Japanese bakers, who had learned to handle Manitoba high grade flour, to Hong Kong and Shanghai to teach the Chinese how to bake bread, but all to no good purpose. The price of high-grade flours prohibited their sale. Large sample orders given our traveller were not repeated,

the trouble being price. We still ship 1 to 2 cars per month of high-grades to China, but not at a profit, just keeping trade open in the hope that some day we may be able to sell at a profit. There is of course an unlimited demand for our low grades; but there is not much object in cultivating a trade that calls for only 5 per cent of the output, when doing so, oftentimes proves detrimental to the other 95 per cent of trade—who generally want a portion of their orders in low grades. On the whole, Manitoba and the west will have a good crop; and, on account of price, a better paying crop than last year.'

The *Winnipeg Market Record* says, date September 20: 'Prices are so high that there is little chance of any trade being done with the orient unless they are very hard up for supplies. The home market will take a great deal more low grade flour this year than previously, and the British market is at the present time making firm bids for our higher grades.'

DECLARATION OF POLICY.

The policy of the Japanese government having been taken to tend towards trade protection, on a recent important public occasion, Baron Sakatani, Finance Minister, is reported to have made an interesting statement which is accepted as a virtual disavowal of the policy of protection. He endorsed, almost in so many words, the conclusion arrived at by Mr. Soyeda (Japanese Financial Agent in London), and formulated plainly by the latter on his recent return from Europe, namely, that the great industrial progress made by Germany during the past three or four decades had been the outcome purely of energy and industry and was not due to any exercise of the protection policy. England was now in the throes of a hot discussion about this question of free trade or retaliatory protection, but a final decision seems still a long way off. Meanwhile he (Baron Sakatani) was persuaded that Japan must look rather to her own diligence than to the ægis of protection, and must bear in mind the fact that a supply of hard money is essential, and that the only certain way of procuring it is by developing her export trade and encouraging expenditure by foreigners in the country.

Baron Shibusawa (a leading financial authority and capitalist), in replying to the above speech, referred 'once more to the necessity of raising the standard of commercial morality in Japan; and urged that in any practical, public platform, the main feature of that platform should be the preaching of commercial morality.'

JAPANESE OAK.

An inquiry for Oak, suitable for barrel staves, received at this office from the Pacific coast of Canada, has brought out some information; but only one firm, in the business of manufacturing or dealing in Japanese forest products, responded with a readiness to undertake. This firm, in northern Japan, is a substantial one, having recently declared a large dividend and made provision for extensions. They, however, offer only squared timber, not having the facilities for sawing export orders, which usually are received upon short time and in some approach to cargo quantity. The dimensions of timber offered are 1 foot by 1 foot and over; and 8 feet by 12 feet in length, at \$175 per 1,000 cubic feet, English measure, f.o.b.

A company in Shanghai, dealing largely in Japan timber, who operate a barrel factory, say that they have had great difficulty in finding the right wood for coopering work. Their experience, they report, is that 'very little of the oak grown in Japan is suitable for barrel staves, although for other classes of work it is fully equal and in some cases superior to American and European oak. We are therefore of the opinion that good barrel staves cannot be supplied in oak, in large quantities, for export by Japan. For our barrel works, we have found that good white ash has given the most satisfaction. Our barrels are made for the export of wood oil.'

Observation at the furniture shops and cabinet factories, in Japan, would quite prepare one to learn, as from the Shanghai company's advices, that for other uses than

barrel staves, the Japanese oak should be a favourite article, and well worth looking after. It is of close, fine texture, light colour, the 'oak-heart' and 'quartered-oak' grain showing clearly and beautifully. It should yield exquisite finish in cabinet work, and in house finishings, such as panelled doors and wainscoting, to the pleasure of those who appreciate the beauty of the 'grain' of the oak.

On the subject of the export of timber and lumber from Japan, it is stated by the *Kobe Chronicle*, that there has lately been a marked increase. The value of railway sleepers, wood for tea chests, timber and planks exported this year up to the end of August amounted to about 8,680,000 yen. This compares with the corresponding periods of the preceding two years, as follows :—

	1907.	1906.	1905.
Railway sleepers.	Y2,120,000	Y1,259,000	Y 703,000
Wood for tea chests.	358,000	489,000	263,000
Timber and planks.	6,208,000	3,928,000	2,102,000
Total.	Y8,686,000	Y5,676,000	Y3,068,000

The value of Kyogi (shavings) material for chip-braid, and match-stick wood exported is as follows :—

1907.	Y149,000
1906.	138,000
1905.	113,000

(1 yen = 50 cents.)

Under present conditions, it is expected that orders for wood will greatly increase, and the total value for the whole of this year is expected to reach Y15,000,000.

The principal cause of this increase of export of timber is the demand for the South Manchuria, Seoul-Fusan and Seoul-Wiju railways, and the building of houses in Manchuria and Korea. There is also a noticeable increase in the demand for railway timber from the neighbourhood of Tientsin, while the American demand for Japanese woods produced in the Hokkaido, for desks, organ stands, doors and barrels, is also greatly increasing, owing to the beautiful grain of these woods.

WHAT AUSTRALIA IS DOING.

Current reports are to the effect that a contract has been signed between the Teikoku Reize Kabushiki Kaisha (Imperial Cold Storage Company, Limited), of Tokio, and a Melbourne firm for the import from Australia of frozen meat, and dairy produce to the value of over a million yen. Delivery commences in March next on a contract that covers a period of three years. A special feature of the contract is that, wherever practicable, preference is to be given to Victorian products.

Machinery for cold storage plant has been ordered for Tokio, Yokohama, Nagoya and Osaka. Refrigerator cars, now being built at Tokio, will convey the meat and dairy produce to various places where depots will be established.

Canada does not offer beef and mutton from the nearer great northwest of that country, nor is there cold storage transportation to induce it.

THE JAPANESE SPHERE.

There are frequently occurring incidents that go to show that whatever the average Japanese emigrant and emigration company may be inclined to do, the Japanese authorities and capitalists prefer to look to Japan's sphere of influence on the mainland of Asia for the opportunities of investing capital and effecting profitable development. The *Japan Times* says:—The Toyo Takushoku Kaisha (Oriental Colonization Company), to be established with a capital of 150,000,000 yen, is to be organized on the plan of the Industrial Bank of Japan and South Manchurian Railway. The organiz-

ing committee will be appointed from members of the Imperial Diet, and leading business men, as well as officials connected with colonial business. The president and vice-president are to be appointed by the government, while the directors will be elected by the shareholders, and appointed with the approval of the government authorities.

‘Of the total capital, 60,000,000 yen (1 yen=50 cents) will be undertaken by the government; 50,000,000 yen by the promoters and Korean partners, while the remainder will be invited from the public.’

INTERNATIONAL CONFERENCE—CHAMBERS OF COMMERCE.

At a meeting of secretaries of Chambers of Commerce, recently held at the office of the Department of Agriculture and Commerce, Tokio, a committee was appointed to settle arrangements for an international conference which it is proposed to hold in Tokio during the exhibition of 1912. The committee, at a meeting subsequently, considered the date of the conference, the language to be used, and other details.

WEAVERS IN CONFERENCE.

A conference of weavers, from all parts of Japan, at Kyoto recently, was addressed by Mr. Oka, a councillor in the Department of Agriculture and Commerce, who as reported by the *Kobo Chronicle*, said that weavers' guilds were organized upon solemn articles of association approved by the government. In most cases, however, they accomplished little in furthering the interests of the industry; they appeared to have done nothing beyond arranging tables and chairs at their offices. Little confidence was therefore placed in the guilds; the coupon indicating inspection by the guild, which was affixed to goods, was not relied upon even by Japanese customers. For example, in silk, habutai for export would be dealt with on the reputation of the trade-mark of each firm dealing in the goods. It was necessary to the strengthening of confidence in guilds for the weavers to establish centres for experimenting in dyeing, and model weaving factories, and so to keep themselves in constant touch with experts in the weaving industry, and to continually study new designs and patterns. Referring to the labour question, Mr. Oka remarked that a factory law would be adopted by the Department of Agriculture and Commerce before long, and all factories, employing from ten upwards, would come under that law. The duty of master weavers, however, was to adopt measures for the protection and relief of their employees without waiting for the enactment of legislation.

The meeting unanimously adopted resolutions to organize a union of guilds, and to petition the government asking that measures be taken for encouraging the exports of woven fabrics, and for checking the importation of such goods. There is no doubt as to what is meant by these unanimously adopted resolutions.

DIRECT EXPORT OF TEA.

The tea merchants in Shidzuoka have formed a corporation under the firm name of the Dai Nippon Seicha Yushitsu Kaisha (Japan Tea Exporting Company), with a capital of one million yen, for the purpose of undertaking the direct export of tea to foreign markets from the port of Shidzuoka.

Shidzuoka, a tea producing centre, with its port Shimizu, is now fairly claiming a share of the tea export business that formerly was divided between Yokohama and Kobe. The tea trade at present is in a condition not satisfactory to those engaged in it, and under which it seems to be losing ground by competition in the world's markets. A current idea is that it is suffering from undue exploitation by contending interests. The sooner the tea trade resolutely determines to depend upon the merits of its products, the sooner it will regain the place from which it is falling away. It is suffering

from speculative exploitation, which relies largely upon guild patronage and subsidy backing. The other and the better policy would be to shun all such extraneous aids, and to throw open a free course to private capital in the hands of people who understand the business. Japan teas, with the aid of scientific inquiry in production, and practical skill in manufacture and marketing, will prove inviting to all the capital required, and will hold their own in the tea-drinking world.

DEPRECIATED SECURITIES.

That shares, even those of the highest standing commercially, should have continued to sink down, down far below the various declining points at which it was from time to time thought the lowest possible had been reached, is not to be regarded as the equivalent of a corresponding decrease in value of the properties represented; but rather as having a proportionate relation to the greatness of the late expansion and the liabilities incurred under cover of it, and the completeness of the bursting of the great bubble. There are financial doctrinaires, numerous enough, amongst the Japanese. They have been pressing for relief, of what is only a natural condition, not without a healthy convalescence apparent. Contrary to the scientific rule of starving a fever in the convalescent stage, the patients are, as usual in such cases, calling for more food. They call upon the imperial treasury to hand over the railway nationalization bonds, which have a five-year limit within which to issue; and they claim that the class of securities negotiable by the banks should be enlarged.

It may be said that all the responsible financial authorities are against any such treatment of the situation. Mr. Matsukata, a leading banking authority, is quoted by the *Jiji Shimpō* (*Times*) as strongly denying the expediency of abnormal attempts to bolster up the share market. He considers that 'such essays would ultimately produce the opposite effect. When the share market behaves as it has recently behaved, that is to say, when prices fall quite below the level of reasonable limits, natural reaction is sure to take place, and it is safer and more wholesome to trust to the operation of normal factors than to apply artificial stimulus.'

With regard to the causes of the present depression, Mr. Sonoda, a leading Tokio bank president and financier, indicates two. The first is, that financial circles are suffering from the reaction which inevitably followed the excessive boom of last spring; and the second, that present nervousness has been accentuated of late by the state of the markets of Europe and America. If in the commercial and industrial conditions of Japan any cause for the existing depression were discernible, the matter would be serious. But there is no such cause. On the contrary, he says, everything is prosperous and promising; and it may, therefore, be confidently expected that the share market if let to itself will recover its tone.

A. MACLEAN.

CITY TRADE BRANCH.

REPORT BY CANADIAN REPRESENTATIVE.

(Mr. Harrison Watson.)

73 BASINGHALL STREET,

LONDON, E.C., ENG., October 29, 1907.

PLUMBAGO.

A typical case came to my notice which it may be interesting to refer to as an illustration of the practical utility of the facilities which we have available for furnishing information about Canadian resources.

The chemist of one of the largest manufacturers of grate polish, blacklead, &c., who was about to proceed to the far east to examine into some deposits of plumbago which had been offered to his company in Corea, wrote us for information as to the existence of plumbago in the Dominion.

When furnishing some general information on the subject, we suggested that a personal interview would be more satisfactory. The chemist, when passing through London, consequently called at the office and was furnished with the special report on Canadian plumbago compiled by the Canadian Department of Mines, and also shown extracts from other official reports which have been published from time to time. The writer also communicated to him various details which have come to his notice in connection with several attempts which have been made to introduce Canadian plumbago to the United Kingdom market.

The chemist was also taken to the Imperial Institute, where he had the opportunity of seeing a number of specimens of plumbago displayed in the Canadian section, and further, had some conversation with the official who had, some little time ago, examined and reported upon several specimens of Canadian plumbago which had been sent to the laboratories for purposes of investigation.

It was understood that the chemist would visit Canada either on his way to or back from the east, and examine more fully into the matter, as he was of the opinion that some of the Canadian plumbago would be well adapted for the purposes of the company. The opinion prevails that such Canadian plumbago as has been seen in this country is less suitable for the production of crucibles than the graphite which comes from Ceylon, so that an increase in its use for polishing and lubricating purposes should be of benefit to the Dominion.

MAPLE FLOORING.

Among interesting inquiries during the month have been an application from an important company prepared to purchase large quantities of maple flooring if satisfactory arrangements as to price and delivery can be concluded; and another from a London firm as to the possibilities of obtaining supplies of newspaper for use in South Africa.

PORTLAND CEMENT.

We have received quite a number of applications from Canadian correspondents reporting an active demand for Portland cement and other building supplies, and as a further example of the extent to which the existing resources of the country are strained, we were informed by a firm the other day who has, in the past, made unsuccessful attempts to develop trade in Swiss condensed milk, that they had recently received a number of cable orders for the article, because the Canadian manufacturers have more business than they can deal with.

CANADIAN MINING REPORTS.

We continue to receive a considerable number of inquiries about Canadian mineral resources, and applications for copies of the reports on mining operations, which are annually issued by several of the provinces. In this connection several persons have called attention to the apparent delay which occurs in the publication of these reports whereby much of the news is to a certain extent out of date by the time the particular report is in the hands of the public. There are naturally difficulties in compiling reports of this description where the material comes from so many sources, but on the other hand it is possible that some improvement might be made in the direction indicated.

APPLE CROP.

As a result of the indifferent apple crop in the United Kingdom and the partial failure on the continent, it is not surprising to learn that Canadian shippers are standing out for abnormally high figures for their fruit. One firm informed us the other day that they had also had difficulty in obtaining any quotations whatever for gallon apples. High prices certainly should be realized for high class fruit, but Canadian shippers should not forget that bananas and oranges, of which large supplies are available, are also popular with the consumer in this country, and that when prices reach a certain figure the demand for apples is sure to fall away.

Apart from this it is stated that the prospects of a good yield in Tasmania and Australia are favourable. These apples hold a high reputation in this country and supplies will commence to come in soon after the turn of the year.

HARRISON WATSON.

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT.

(*Mr. C. E. Sontum.*)

CHRISTIANIA, NORWAY, GAUBBEGD No. 4, November 1, 1907.

IMPORT OF BUTTER. TO NORWAY.

The large import of butter to Norway still continues. During the month of September there was imported into Christiania alone about 80,000 kilogrammes = 176,000 pounds of natural butter, which principally came from Denmark, but of Siberian origin. During the first twenty days of October there has likewise been imported about 84,000 kilogrammes = 184,800 pounds. Part of this was of French and Galician make. For comparison it may be stated that last year during the same two months there was imported in all only 49,000 kilogrammes = 107,800 pounds of natural butter.

INCREASED IMPORT OF GRAIN.

During the month of September there was, according to official returns, imported to the port of Christiania 1,727 tons barley, 3,393 tons rye, 4,560 tons corn and 1,118 tons oats. During the same month last year the import was 1,061 tons barley, 8,423 tons rye, 0 tons corn and 30 tons oats. The import of rye has thus gone considerable down as compared with the same month last year, while the import of the other kinds of grain has gone up, as a consequence of the poor harvest. The shortage of oats is especially felt. The smaller import of rye has, however, not its cause in less need for

import, but greatly because of the very high prices that are demanded by the foreign exporters. The price of rye here now is very near 50 per cent higher than last year. The importers are, therefore, not buying more rye than to carry them over from one week to another.

UTILIZATION OF TURF-MOSSES IN PAPER INDUSTRY.

The utilization of turf-mosses in the paper industry, which has for a long time been announced, now seems as if it is going to be carried out. An English company, which claims to have a capital of £225,000 for this purpose, has bought large areas of turf-mosses in Sweden. It is the intention of the company there to start manufacturing on a large scale of pasteboard and 'Kraft' paper.

'NEWS' PAPER PRICES HIGHER.

The Swedish Paper Makers' Association have recently had a meeting, at which also the larger Norwegian factories were represented. It was agreed that as the market showed considerable improvement, and the production of both of the countries for 1907 and 1908 was already disposed of at rising prices, a considerable raise should take place for future sales.

C. E. SONTUM.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

(*Mr. J. B. Jackson.*)

NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENG., November 13, 1907.

TURNED WOODS.

There are remarkably good openings at present to build up a substantial trade in supplying a demand for any and every kind of turned wood suitable for the building, cabinet and other trades.

Inquiries for goods under this heading are continually reaching this office and a keen interest is being manifested in the prospects of securing direct supplies from the Dominion. A few of the miscellaneous goods for which there is an ever-growing demand in the northeast of England may be enumerated as follows.—

- (a) Broom handles.
- (b) Small wood boxes suitable for holding pills, &c.
- (c) Balustrades.
- (d) Table and chair legs.
- (e) Doors for domestic dwellings, offices, &c.
- (f) Window sashes.
- (g) Church fittings.
- (h) Boat oars.
- (i) Small wood boards for the making of mouse traps.
- (j) Spring rollers for windows.
- (k) Picture frames.
- (l) Ash 'D' planks and tool and implement handles of all kinds.
- (m) Cart shafts.
- (n) Clothes pegs.
- (o) Maple blocks for bobbin making.

- (p) Wood pulleys.
- (q) Plywood for trousers' stretchers.
- (r) Maple roller blocks for washing machinery.
- (s) Garden seats, school desks, &c.
- (t) Wood blocks for flooring.
- (u) Box wood in various sizes.
- (v) Small wood boxes used by electrical engineers.

In addition to these it is no exaggeration to say that if prices are right, anything in the turned wood line can secure a ready market in this district. The prospects, for instance, of supplying the local fruit trade with wood chip baskets suitable for holding black currants, and other small fruit, are particularly good, and it rests with Canadian manufacturers to take advantage of their opportunities in this direction.

I shall be pleased to hear from exporters interested in opening up trade in these and other goods mentioned, to whom more complete details of the requirements of local buyers can be forwarded. So brisk is the demand that I am inclined to the opinion that if some of the larger manufacturers were to appoint an agent on the spot to secure orders first hand, an especially good trade would soon be established. Canadian manufacturers should also bear in mind that delivery, equal to sample, is a condition precedent to doing business, any breach of the conditions puts the defaulter on the black list for all time to come.

CANADIAN WOODWORKING MACHINERY FAVOURED.

Whilst on the subject of turned woods, it will be gratifying to those Canadian firms, who in the past, have made such energetic efforts to secure orders for wood-working machinery, to learn that their productions are at last steadily growing in favour among local timber mills. Many firms in the north of England, especially in the Tees and Tyneside districts, are now equipped with Canadian-made machinery which is giving satisfaction in every respect. Most of the orders secured have resulted mainly from the persistence which certain manufacturers have shown in mailing their catalogues to likely buyers on this side, and a continuance of this policy is to be strongly advocated to secure further trade. Buyers should also be kept regularly posted with descriptive pamphlets and other particulars of any new improvements, &c., as this is always an inducement to business.

JNO. B. JACKSON.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. MacNamara.*)

CANADA CHAMBERS, 36 SPRING GARDENS,
MANCHESTER, ENG., November 15, 1907.

CHEESE.

I have received from prominent provision merchants assurance that the trade in cheese is undergoing a considerable change in Manchester and district. Up to a few years ago practically nothing was sold in Lancashire except Cheshire and Canadian cheese, but now there is an increasing production every year in the quantity of cheese made in the county itself. This year competition from this source has been felt more seriously than hitherto, inasmuch as the quality has been considerably improved, in.

addition to a larger quantity being placed on the market, and buyers are purchasing this description to whom a few years ago it was practically unknown. The price has compared favourably with Canadian, and in many cases the local article was regarded as much better value for immediate use than any other description of cheese on the market.

The rise in Canadian during August and September has deterred many buyers from laying in anything like their usual stocks, and as the present figures are regarded as having reached their highest, the disposition of wholesale and retail firms is to buy for immediate requirements and take their chance of what the markets may be after Christmas. There is considerable speculation as to the probable arrivals of cheese from the Antipodes. Some advices indicate that owing to the comparatively low prices ruling there for butter, that a much larger quantity of cheese will be sent to England during the coming winter and spring than was the case in 1906-7. Canadian cheese is being sold on the spot at from 60s. to 63s., according to quality.

CHESHIRE CHEESE.

At the Whitchurch cheese fair held in conjunction with the dairy show on the 13th inst., record prices were obtained. No less than 225 tons were offered, a total unprecedented in this industry.

The price realized for prize cheese was sensational, namely, ten guineas per hundredweight, and other lots made big prices.

Cheese in the ordinary fair realized from 68s. to 72s. per hundredweight for the higher grades, and the medium and lower qualities down to 60s. per hundredweight. These latter prices were somewhat lower than those prevailing at the fair last year.

BUTTER.

The market for Canadian butter has been rather small this season owing to the very high price it reached. Unless it can be sold as a rule at from 10s. to 15s. per cwt. under the price of fresh landed Danish and Swedish butter, there is not much disposition to take it in Lancashire. During August and September the c. i. f. figures were altogether above the parity of prices obtainable in Manchester. The result was a considerable shrinkage in the orders from Manchester importers. At present the price on the Manchester market is from 116s. to 120s., but the trade passing is very trifling and stocks are almost non-existent.

EGGS.

The Manchester market has seen no Canadian eggs this season, although inquiries from this office have gone forward, owing, it is considered, to the higher prices obtainable for them elsewhere. Continental supplies have come forward freely and except in July and August the quality gave satisfaction. Russians continue to arrive freely, and some brands are considered equal almost to the best coming from other continental sources having an old and high reputation. Best Irish are selling at 13s. 6d. to 14s. 6d.; best Danish, 13s. to 13s. 6d., and best Russians 8s. 9d. to 9s. per 120, all 15 lbs. to 15½ lbs. average.

POTATOES.

No doubt owing to the very wet season experienced throughout England the potato crop has been adversely affected, and in the county of Cheshire a great acreage has been visited with disease. Farmers complain that the season will prove to be one of the worst ever known, and that potatoes will be scarce and dear. In some districts of Cheshire where they are largely grown, almost half of those dug up have been found rotten. I have received inquiries for Canadian potatoes, and one correspondent states

that shipment to Manchester via the Manchester Liners and ship canal should prove very profitable. At present it costs 1s. per bag to import potatoes from the continent. The freight per ton from St. John to Manchester is about 10s., leaving a good margin for railroad haul as against continental charges. It is suggested that Canadian potatoes should be shipped in bags of 112 lbs. each, cost of bags to be included in the price of the potatoes. Attention should be paid to the packing, and all small sizes excluded. Light soil potatoes are preferred. The present market price for best quality is 108s. per ton, second quality 95s.

APPLES AT LIVERPOOL.

Messrs. Woodall & Co. report, under date November 9:—

The arrivals this week.. . . .	brls.	68,086
“ “	boxes.	2,365
“ last week.. . . .	brls.	68,874
“ “	“	42,391
The arrivals to date.. . . .	“	274,690
“ against same period last year.. . . .	“	307,792

As will be seen from the above figures, receipts for the week show a substantial increase, and are the largest so far this season; still, the total quantity is less than to the same period last year. The condition of arrivals is exceptionally good, which gave buyers confidence, resulting in a brisk demand, especially for Canadian No. 1 stock, but owing to the increased quantity of No. 2's, these showed a decline.

PRICES OBTAINED.

BRITISH TRADE RETURNS.

The Board of Trade returns recently issued show the imports for October £57,662,116 as against £54,637,062 for October, 1906, an increase of £3,025,054. The exports totalled £38,319,520, and for October, 1906, £33,234,331, an increase of £5,085,189.

P. B. MacNAMARA.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, November 19, 1907.

PERISHABLE FOOD PRODUCTS.

A considerable quantity of perishable food products is consumed in this market every year, including dressed poultry, fruit and vegetables of various kinds, all of which find a ready sale at highly remunerative prices.

Owing to the absence of any provision for cold storage on the steamers running between Montreal and this port, the whole of these goods come here from New York, by the steamer *Rosalind*, of the Red Cross Line, which is the only boat equipped with cold storage facilities, and this, I understand, is operated as a monopoly in the hands of an official connected with that steamer. Under such circumstances it is easy to understand that the prices demanded by the dealers are usually quite exorbitant, while the supply often falls far short of the demand.

In the interests of Canadian exporters of similar goods it appears to be very desirable that some provision should be made whereby the steamers trading on the St. Lawrence route during the season of navigation could be fitted up for the safe transport of perishable freight. When this is done there seems to be no reason why a large portion of this trade should not be supplied by Canada, especially during the later portion of the year. It is difficult to get any reliable figures concerning the extent of this business, but from inquiries I have made I should say that it amounts to something like \$25,000 to \$30,000 annually, and may be considerably more.

DRESSED MEATS.

The trade in dressed beef and mutton also seems to be worthy of more attention than it has hitherto received at the hands of Canadian exporters. I referred to this subject in my report dated June 22, last, and since then I have learned that one of the difficulties likely to prove an obstacle in the improvement and increase of this trade, is the absence at present of properly fitted up cars especially at this end of the route, and of cold storage room on the steamers. No doubt if sufficient encouragement could be given of a remunerative amount of business to warrant the outlay, the necessary improvements would soon be forthcoming.

E. D. ARNAUD.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, AUSTRALIA, October 19, 1907.

THE NEW ZEALAND TARIFF.

The New Zealand tariff, as passed, does not differ in the main provisions from the form as first introduced by the Committee of Ways and Means. Plain confectionery has been reduced from 3d. to 2d. per lb. A new item, flaked maize, has been included with a duty of 1s. per bushel. The chief changes affecting the trade of Canada are those respecting boots and shoes and, as it is, that item will affect to a considerable extent the Canadian trade. The tariff is given in full:—

Boots, shoes, clogs and pattens, not otherwise enumerated, viz.:—

	£	s.	d.
Men's, above size No. 5	0	1	6
Youths', above size No. 1	0	1	0
Boys', Nos. 7 to 1, both inclusive	0	0	6
Women's, above size No. 1	0	1	0
Girl's, Nos. 7 to 1, both inclusive	0	0	6
Other kinds	0	1	0
Slippers (not including lawn tennis and gymnasium shoes soled with india rubber or felt)	0	0	6

On the above items is an additional duty of 15 per cent *ad valorem*.

Slippers of felt, with carpet, twine, or felt soles; shoes or goloshes known as Plimsolls with moulded india-rubber soles; champion, gymnasium, yachting and lawn tennis boots and shoes, with moulded india-rubber soles; goloshes or overshoes of all kinds, of rubber; shoettes and sandals, not otherwise enumerated, all 22½ per cent.

PRINCIPAL CHANGES.

The principal changes in the new tariff affecting the trade of Canada are in the striking out of the preferential duties upon the following items: rubber tyres, pneumatic tyres, and inner tubes, wall paper, gum boots, sail cloth, canvas, unbleached double warped duck and surgical and dental instruments and appliances. On wall paper Canada had secured half the trade outside of that imported from Great Britain. In gum boots it had secured half the total importations. In canvas it also had secured a fair share of the trade. In surgical and dental instruments, notwithstanding the advantages that it had, Canada had done something, but not very much, but it was possible that if these items had been retained upon the preferential list the trade would have been entered upon. A number of articles placed on the preferential list in the tariff first introduced, have been struck out in the revised. In some cases these would have been of advantage to Canada. Amongst these items are motor cars and wheels for the same, which were first free, but are now dutiable at 20 per cent, and taken off the preferential list. Amongst other items originally proposed for a preference but now excluded are, onions, potatoes, gum boots, as stated, axles, axle arms, and axle pockets.

THE PREFERENTIAL LIST.

Against these reductions there has been a large extension of the preferential list. As before, preference is granted to the goods named when produced in any part of the British Empire, and is an addition to the general duties where any such duties are levied. The list is included in three schedules. Schedule 'C' has but one item, cement, upon which the duty is 2s. per barrel when of British origin, and 4s. when imported from foreign countries. On articles in schedule 'D,' parts I. and II., there is an additional duty of 50 per cent of the duty levied by the tariff on foreign goods. In the articles included in Part II. the preferential advantage does not go into force until March 31, next. The following are the items in Part I., in which Canada is or may be interested:—

SCHEDULE D.—PART I.

NAMES OF ARTICLES.

Bicycles, tricycles, and the like vehicles, also finished, partly finished or machined parts of the same, not otherwise enumerated.

Boots, shoes, clogs and pattens, not otherwise enumerated, namely, men's, above size No. 5; youth's, above size No. 1; boy's, Nos. 7 to 1, both inclusive; women's, above size No. 1; girl's, Nos. 7 to 1, both inclusive; other kinds; slippers (not including lawn tennis and gymnasium shoes soled with india-rubber or felt); slippers of felt, with carpet, twine or felt soles; shoes or goloshes known as Plimsolls, with moulded india-rubber soles; champion, gymnasium, yachting and lawn tennis boots and shoes, with moulded india-rubber soles; goloshes or overshoes of all kinds, of rubber; shoette and sandals, not otherwise enumerated.

Candles.

Carriages, carts, drays, wagons, perambulators, and the like vehicles, and wheels for the same.

Clocks, time registers, and time detectors.

Cordage, rope and twine, not otherwise enumerated.

Earthenware, stoneware and brownware.

Fancy goods, and toys; also sporting, gaming and athletic requisites not otherwise enumerated, including billiard tables, and billiard requisites, hair, and toilet combs.

Firearms, all kinds.

Fish, potted and preserved (not including sardines).

Furniture and cabinetware, not otherwise enumerated, and other than iron and other metal.

Glassware; globes and chimneys for lamps.

Hardware, ironmongery, and hollowware, not otherwise enumerated.

Hops.

Iron, and other nails, not otherwise enumerated, including dog-spikes.

Iron pipes, wrought, not otherwise enumerated, and wood or fibre pipes, exceeding 6 inches in internal diameter, also knees, bends, elbows, and other fittings for the same. Cast iron pipes exceeding 9 inches in internal diameter, and knees, bends, elbows, and other fittings for the same.

Jewellery; seven-eighth; plate, gold, or silver; platedware.

Lamps, lanterns, and lampwick, not otherwise enumerated.

Lawn-mowers.

Musical instruments.

Paper-wrapping, all kinds, not printed, including blue candle, glazed cap, glazed casings, small-hand, lumber-hand, tissue, brown, cartridge, and sugar papers.

Upholstery, not otherwise enumerated.

Walking-sticks.

SCHEDULE D.—PART II.

Bill-hooks, bush-hooks, slashers, and hedge-knives.

Brooms, brushes and brushware.

Cartridges (shot) 10 to 24 bore.

Cartridge cases.

Cartridges, not otherwise enumerated.

Cars, wagons and trucks, railway, and tramway; and wheels for the same not otherwise enumerated.

Electric batteries and cells; furniture, fittings, instruments, and appliances, not otherwise enumerated, for the generation, transmission, application, or utilization of electricity, or of electric power of any description whatsoever.

Fish, dried, pickled, or salted, not otherwise enumerated.

Galvanized iron manufactures, not otherwise enumerated, made up from galvanized iron, or from plain sheet iron, and then galvanized.

Heel-plates, and toe stiffeners, and toe plates.

Japanned and laquered metalware.

Laces, vamps, and uppers; also clog or patten soles.

Lay figures, busts, and dress stands.

Leather bags, and leather cloth bags, not otherwise enumerated.

Leather cut into shapes.

Leather leggings.

Leather manufactures, not otherwise enumerated.

Machinery, electric, and appliances, namely, electric generators and electric motors, including slide rails therefor, electric lamps, including globes for arc lamps, electric transformers.

Magic lanterns, bioscopes, cinematographs, kinetoscopes, and the like instruments, including accessories peculiar thereto, not otherwise enumerated; also limelight and the like apparatus, including accessories peculiar thereto, except magic lantern slides.

Mantelpieces, other than stone.

Manufactured or partly manufactured articles of metal, or manufactured or partly manufactured articles of metal in combination with any other metal whatsoever, not otherwise enumerated.

Matches:—Wooden, in boxes containing not more than 60 matches; in boxes containing over 60 and not more than 100 matches; in boxes containing more than 100 matches. Wax:—'Plaid vestas' in cardboard boxes, containing under 100 matches. 'Pocket vestas' in tin or other boxes, containing under 100 matches. Wax, other kinds. Matches of any material other than wood or wax.

Paper bags, coarse (including sugar bags).

Paper bags, not otherwise enumerated.

Picture or photograph frames or mounts.

Statues, statuettes, casts and bronzes.

Tinware, and tin manufactures, not otherwise enumerated.

Tobacco pipes and cases, cigar and cigarette holders and cases, cigarette cases and papers.

Woodenware and turnery, not otherwise enumerated, and veneers.

Lard, and refined animal fats, not otherwise enumerated.

Meats, potted or preserved.

Provisions, not otherwise enumerated.

Vegetables, fresh, dried or preserved.

Fruits, preserved in juice or syrup.

Milk or cream, preserved, evaporated or dried.

Fruit juices or imitation fruit juices, unsweetened, in containers of less than ten gallons capacity.

Fruit juices or imitation fruit juices, sweetened, syrups, raspberry vinegar, sweetened.

Baking powder; yeast preparations, and other ferments; also yeast foods.

Chemicals, and chemical preparations, not otherwise enumerated, including photographic chemicals not otherwise enumerated; also anti-incrustation, boiler, and other compounds.

Essences, flavouring, not otherwise enumerated.

Medicinal preparations, drugs and druggists' sundries, and apothecaries wares, not otherwise enumerated; also aerated water makers' and cordial manufacturers' and brewers' drugs, chemicals, and other sundries, not otherwise enumerated.

Medicinal preparations (excepting medicated wines or wines mixed with food) containing 50 per cent of proof spirit or less.

Saddlery and harness; whips and whip-thongs.

Portmanteaux; trunks, travelling-bags, and brief-bags, of leather or leather-cloth, 10 inches in length and upwards, and carpet-bags.

Furniture, knife, and plate powder, and polish; also floor and linoleum polishes, not being varnishes.

Photographic goods, not otherwise enumerated.

Oil, perfumed; also toilet preparations, and perfumery, not otherwise enumerated.

Cardboard, pasteboard, strawboard, wood-pulp, corrugated board, and cloth-lined board, not otherwise enumerated.

Cloth-lined, enamelled, gelatine, and metallic papers, not otherwise enumerated; also 'ivorite,' not otherwise enumerated.

Ink, writing.

Stationery, and writing paper, not otherwise enumerated; also printers' menu, wedding, programme, and mourning cards of cardboard, celluloid, or other material, edged or embossed but otherwise unprinted.

Calendars and showcards, all kinds.

Cardboard or paper boxes complete; or cardboard or paper, cut, or shaped, for boxes, wrappers, or other receptacles (including match-boxes).

Stationery, manufactured, viz.:—Account-books, manuscript-books, scribbling and letter blocks, and books; plain or ruled; bill-head, invoice and statement forms; printed or ruled paper, counter books, cheque and draft forms; tags, labels, not printed or lithographed, blotting-pads, sketch-books, book-covers, copying letter-books, manifold-writers, albums (other than photographs), diaries, birthday-books, plain or faint lined ruled books, printed window-tickets, printed, lithographed or embossed stationery, not otherwise enumerated, and Christmas, New Year, birthday, Easter and other cards, and booklets.

Boilers, land and marine, including feed-water heaters, fuel-economizers, steam super-heaters, and mechanical stokers.

Crab winches, cranes, capstans, and windlasses.

Machinery, not otherwise enumerated.

Steam-engines, and parts of steam-engines, not otherwise enumerated.

Bellows, not otherwise enumerated.

Doors and sashes, either plain or glazed with ornamental glass.

Axle grease, and other solid lubricants; petroleum greases and mixtures of the same with other substances, not otherwise enumerated.

Harness oil, and composition, leather dressing, and belt dressing, also leather revivers and polishers, not otherwise enumerated.

Animals, food for, of all kinds, not otherwise enumerated, including horse and cattle spices, and condiments, proprietary or otherwise; also hemp-seed, maw-seed, millet-seed, canary-seed and mixed bird-seed.

Bags, calico, forfar, linen, flour, bagging, bags, and sacks, not otherwise enumerated, including filter bags and sheaths.

Blacking, and boot-gloss, and polish.

Blacklead.

Boats, launches, yachts; also all vessels propelled by means other than oars (when imported in any vessel) including all fittings therefor, not otherwise enumerated.

Fireworks, not otherwise enumerated.
 Nets, and netting.
 Tarpaulins, tents, sails, rick, and wagon covers.
 Soap, not otherwise enumerated.

SCHEDULE D.—PART III.

The preference upon the articles in this section is one-fifth of the duties of the general tariff. As in Part II. of this schedule, the preferential duties do not go into effect until March 31, next. There are not many items in this list to interest Canadians, but the following should be of value:—

NAMES OF ARTICLES.

Biscuits, ships', plain and unsweetened; also dog biscuits.
 Biscuits, other kinds.
 Confectionery not otherwise enumerated, including medicated lozenges, medicated confectionery, boiled sugars, liquorice, not otherwise enumerated, sugared or crystallized fruits.
 Chocolate confectionery, and confectionery containing chocolate: (1) in plain trade packages (2) In fancy packages, or in small packages for retail sale.
 Jams, jellies, marmalade, and preserves.
 Jellies, concentrated.
 Handbills, circulars, programmes, playbills, printed posters, trade catalogues, price-lists, and fashion plates; printed advertising matter not otherwise enumerated; also paper bags and wrapping paper, or wrappers, of all kinds, printed or lithographed; printed or lithographed envelopes or labels.
 (NOTE.—This shall not apply to trade catalogues or price-lists of the goods of firms or persons having no established business in New Zealand.)
 Shot.
 Oil, not otherwise enumerated, including mineral lubricating oil, in vessels capable of containing one gallon or more.
 Paints and colours, ground in oil or turpentine; also putty and driers not otherwise enumerated.
 Paints and colours mixed ready for use; also enamel paints, not otherwise enumerated.
 Varnish and lacquers, including lithographic varnish, gold size, liquid gold, and other metallic points; also liquid medium for mixing with metallic paints.
 Grain, and pulse of every kind, when ground or in any way manufactured, not otherwise enumerated, including wheat flour.
 Gelatine, isinglass, glue, and size.
 Soap, common yellow, and blue mottled.
 Spirits, methylated to the satisfaction of the Minister.
 Starch.

SCHEDULE E.

This schedule is also divided into Parts I., II., III. and IV. Part IV. only relates to tea, which is of no interest to Canada. Parts II. and III. of schedule E do not go into effect until March 31, next. The articles in schedule E are free when imported from British countries, but in Parts I. and II. a duty of 20 per cent is levied when imported from foreign countries, and 10 per cent on articles in Part III. The following are the sections of the schedule in which Canada may be interested:—

SCHEDULE E.—PART I.

NAMES OF ARTICLES.

Bicycles and tricycles, fittings for, namely, handle grips, pedal rubbers; also the following articles when not plated, japanned, enamelled or varnished, namely, drop forgings, stampings, steel balls, weldless steel tubes, with or without butted ends, wood or metal rims (not bored), spokes, forks, stays and handle-bars and seat pillars, unbuilt bracket shells, fork and stay ends, fork-tips, bridges, crowns and lugs; also ball-heads complete when not brazed, including all plated parts. Hubs complete plated or otherwise, sprockets, chains and chain-wheels, whether plated or not. Bottom brackets complete, including axles, cups, cranks, and pedals plated or otherwise.

Gas engines and hammers, and oil engines.

Iron pipes, wrought, and wood or fibre pipes not exceeding 6-in. in internal diameter, also knees, bends, elbows and other fittings for the same. Cast iron pipes not exceeding 9-in. in internal diameter, also knees, bends, elbows, and other fittings for the same. Wrought iron boring, casing and lining tubes, for oil boring, mining, or well-sinking purposes.

Iron, plain black, viz., sheet, plate, hoop under 5-in. in width, rod, bolt, bar, angle, tee, channel; plain iron-rolled girders, rolled chequered plates, shafting, plain rolled or plain turned, but otherwise unwrought.

Iron and steel cordage.

Motor engines for bicycles.

Paper, printing.

Rails for railways and tramways, including lay-outs and points, and crossings for the same, also fish plates.

SCHEDULE E.—PART II.

Butter cloth; also cheese cloth, and cheese bandages or caps.

Canvas, india-rubber or other hose, tubing or piping, armoured or otherwise; flexible metal hose, tubing or piping.

Cardboard boxes, material for, namely: gold and silver paper, plain or embossed, embossed paper in strips, gelatine or coloured papers, known as 'box papers.'

Castings for ships; also propeller-screw, including only bosses and blades.

Iron boiler-plates and unflanged end-plates for boilers; boiler tubes not exceeding 6-in. in internal diameter and unflanged; expansion rings, furnace-flues.

Tubular woven cotton cloth in the piece for meat wraps.

SCHEDULE E.—PART III.

Boots, shoes, shoettes, sandals, clogs, and pattens, slippers, and goloshes, namely, children's, Nos. 0 to 6.

Cork soles and sock soles; moulded shoe and slipper soles of rubber.

Photographic cameras and lenses, including focussing cloths and camera covers,

Sensitized surfaces and albumenized paper, plain, not being postcards or other stationery.

Copy-books, having printed headlines on each page; also drawing-books.

Ink, printing.

Anchors.

Blacksmiths' anvils, forges and fans.

Chains, iron, plain, with hook, swivel or ring, attached.

Engine governors.

Fire-engines, chemical fire-engines, and chemical fire-extinguishers; also fire-hose and couplings therefor, portable fire-escapes, fire-ladders, fire-reels, and firemen's helmets, if declared, to the satisfaction of the collector, for the use of a fire brigade.

Machinery, namely, dairying machinery (excluding cream-separating machines, also coolers).

Machinery, mining, and gold saving; also briquette making, and coal washing machines, rock-breaking machines, trommels, stamper batteries, ore feeders, grizzly

bars, steel shoes and dies, ore-crushing rolls, ball mills, grinding pans, tube mills, battery screening woven or punched; also the following machines, materials and appliances, when imported for mining purposes, namely:—Air compressors, not including the motive power for charging the same; chain links and rollers for conveyors, and conveyor belts of rubber or fibre; electric exploders; fans for mine ventilation; filter presses; fuel economizers; sand pumps; sinking pumps; solution pumps, made wholly of metal; steam pumps having a capacity exceeding 5,000 gallons per hour; turbine pumps; shaft signalling gear; steel or iron head frames for mining shafts; battery blanket, not exceeding 3 feet wide; material for filter cloths, and plush or other cloth for gold saving.

Metal sheaves, grooved metal pulleys.

Metal wove-wire, and metal gauze; also wire netting, and expanded metal lathing or fencing, in the piece.

Metallic capsules.

Perforated or cellular sheet zinc or iron.

Portable engines on four or any greater number of wheels, with boiler of locomotive type; also traction engines.

Printing machines or presses; embossing and bronzing machines, cardboard box-making machines, and tools for same.

Printing type and printing materials, not otherwise enumerated, suited only for the use of printers.

Steam or hydraulic pressure, and vacuum gauges; pressure indicators or pressure gauges for gas or oil engines; speed indicators, engineers', for testing machinery.

Surveyors' instruments, viz., steel bands, chains, measuring tapes, field instruments, draughtsman's drawing instruments.

Welded and flanged boiler furnaces, plain or corrugated.

Paints and colours, not otherwise enumerated.

Belting, for driving machinery, other than leather belting and not being cordage or rope.

Binder-twine.

Cork, cut; bungs, fishermen's cork floats, also plain unornamental stoppers of every description for bottles, jars and casks.

Felt-sheathing.

Machinery, viz., refrigerating, dredging, woollen mill, paper mill, rope and twine making, meat preserving, leather splitting.

Soda-water machines; also machines for aerating liquids.

Steam-engines, and parts thereof, for mining (including gold dredging), or gold-saving purposes or processes, or for dairying purposes.

Engines and machines for mining purposes, viz., capstan engines for mining shafts, winding engines, steam, air, or electrically driven, including bed-plates, foundation bolts, and friction clutches, when imported with the engines, drums for winding engines.

THE VALUE OF THE PREFERENCE.

Without giving the tariff in detail, it would be difficult to give the extent of the preference on the items included in schedule D. The tariff, with the exception of boots and shoes, ranges from 20 to 25 per cent. The preference would, therefore, be from 5 to 12½ per cent. On the larger portions of the items it would be 10 per cent.

It is equally as difficult to give the exact value of the trade affected by the preferential conditions. Below is a table of the total imports into the country, and the importations from all foreign countries, as given in the customs return of New Zealand. The imports from foreign countries are larger than those stated. The bulk of the goods came from Great Britain or the Australian colonies, but a very considerable portion of that set down in the customs returns as British goods were actually of foreign origin, as the returns of the goods affected by the late preferential tariff proves. The figures below are as nearly accurate as can be given at the present time.

Importations of articles included in the preferential tariff of New Zealand:—

Articles.	Total Imports.	Imports from foreign countries.
Boots and shoes.	£300,184	£50,433
Bicycles and tricycles.	71,692	1,561
Bicycle fittings.	127,916	3,499
Brooms, brushes and brushware.	33,300	5,259
Candles.	48,522	77
Carts, carriages and materials.	67,117	7,771
Drugs and chemicals.	316,173	55,628
Fancy goods and toys.	170,529	49,582
Fish, preserved.	54,608	10,553
Furniture.	78,820	35,803
Glass and glassware.	175,837	58,445
Musical instruments and materials.	134,212	59,017
Hardware and ironmongery.	371,037	67,894
Rails and railway materials.	247,394	3,899
Nails.	52,670	38,089
Sewing machines.	40,279	25,202
Knitting machines.	2,427	140
Paper machines.	243,588	47,398
Stationery.	174,969	28,166
Firearms.	11,997	7,244
Confectionery.	41,726	8,667
Cartridges.	24,335	12,320
Blacking.	20,632	1,162
Boats.	1,679	286
Clocks.	14,265	13,004
Cordage.	15,136	2,037
Earthenware.	74,903	4,919
Fire engines.	2,030	200
Fire hose.	4,860	957
Farinaceous foods.	13,976	1,999
Fruits, bottled.	20,415	14,670
Boot and shoe materials.	23,836	2,282
Hops.	3,321	1,046
Wire netting.	56,284	1,150
Jewellery.	12,234	246
Lamps and lampware.	40,694	24,333
Machinery, dairying.	38,010	12,083
“ electric.	188,773	48,368
“ gas and oil engines.	92,615	37,176
“ engines, portable.	27,590
“ mining.	48,423	3,227
“ printing.	49,371	16,161
Paints and colours.	100,229	12,065
Plate and platedware.	89,381	5,686
Printing materials.	15,688	1,375
Pumps.	8,644	4,259
Saddlery and harness.	29,140	2,247
Tinware.	14,363	1,133
Varnishes.	23,040	4,623
Watches.	18,672	4,954
Woodenware.	68,921	29,253

J. S. LARKE.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(*Mr. D. H. Ross.*)

STOCK EXCHANGE BUILDING,
MELBOURNE, October 28, 1907.

AUSTRALIAN VALUE-PAYABLE (C.O.D.) PARCEL POST SYSTEM.

Subject to certain regulations the Australian Postal Department undertakes to deliver registered articles sent by parcel post within the Commonwealth, and to recover from the addressee on delivery a specified sum of money fixed by the sender, and to remit this sum to the sender by money order, for which service a small commission is charged. The value-payable postal system is designed to meet the requirements of persons who wish to pay at the time of their receipt for articles sent to them, and also to meet the requirements of traders, and others, who do not wish their goods to be delivered except on payment. It is stipulated that no person can send a parcel by the value-payable post without certifying that it is sent in execution of a bona fide order.

In addition to the ordinary postage and cost of registration, the commission charged by the Postal Department is at the rate of two pence on sums not exceeding ten shillings (4 cents for \$2.43), and one penny for each additional five shillings (2 cents for \$1.22) or fraction thereof. The commission must be prepaid by postage stamps affixed to the parcel and marked 'commission.'

THE COMMONWEALTH ACTING AS TRADERS' AGENT.

With the advent of federal control of the post office the value-payable parcels post system, by means of which the state acts as traders' agent, and, for a commission, delivers a parcel, collects the money due for the goods contained in the parcel and remits the amount collected to the consignor, was extended from Queensland, where it had flourished for years, to the whole of the Commonwealth. Returns which have just been prepared show that outside of Tasmania, which, perhaps, is too small for the benefits of the system to have any scope, the experiment has been remarkably successful.

Queensland and Western Australia, owing to their large and sparsely populated territories, head the list as users of the system, but even in Victoria, where the population is relatively close and trading centres are accessible in all districts, the system is making headway, and, naturally enough, it has been strongly opposed by country storekeepers, as its tendency is towards diverting trade to the metropolis, though to some extent country storekeepers themselves share its advantages. Last year a record was established, except in South Australia, where there was a decrease in the business as compared with 1905. In Victoria the number of parcels sent increased by 87 per cent; in New South Wales they increased by 106 per cent; in Queensland by 38 per cent; in Western Australia by 45 per cent, and in Tasmania by 42 per cent.

EXTENT AND VALUES OF AUSTRALIAN 'C.O.D.' PARCEL POST SYSTEM.

The following return was recently issued by the Commonwealth Postal Department relative to the extent of the value-payable (cash on delivery) parcels post system:—

State.	Year.	Parcels Posted.	Value Collected.	Revenue Postage and Commission.
			£	£
Queensland.....	1905	18,095	23,594	2,496
".....	1906	25,039	33,507	3,556
Western Australia.....	1905	4,494	7,637	667
".....	1906	6,539	11,196	971

".....	1906	731	1,220	93
Tasmania.....	1905	7	14	1
".....	1906	10	17	1

PRISON-MADE WIRE NETTING.

The government of Victoria has this month installed an up-to-date factory for the manufacture of wire netting in the principal state prison at Melbourne. The cost of the erection of the special factory building and the installation of machinery, engines and fittings is in the vicinity of £7,000. The plant consists of eight machines for weaving wire, two selvage machines for twisting the double wire which runs along both edges of the netting, twelve coil lathes for preparing a portion of the wire for weaving and a complete galvanizing outfit. The motive power is supplied by gas engines. With expert attendants the machines are capable of turning out about 5,000 yards of 3 feet 6-inch netting of $1\frac{1}{2}$ -inch mesh (No. 17 gauge) per day. Some 300 tons of plain black wire for weaving the netting and some 60 tons of zinc for galvanizing are now in stock.

This will be sufficient for 250 miles of 3 feet 6-inch netting, as it takes about 24 cwt. of wire and 4 cwt. of zinc to make a mile of the size of netting required. Several Australian states have, for some time past, been importing large quantities of wire netting, and offering it to farmers and settlers at landed cost in order to protect their properties from the ravages of rabbits. Wire netting made by prison labour at Melbourne will be sold by the government of Victoria to farmers within the state at cost of production.

CANADIAN BUTTS OR OAK STAVES.

In the new Commonwealth customs tariff, now under parliamentary debate, duties of 35 per cent (really a net duty of $38\frac{1}{2}$ per cent) have been imposed upon casks, barrels and vats, full or empty, and 12s. (\$2.92) each upon second-hand hogsheads, full or empty. If these duties are maintained, there will be a large demand for Canadian butts or oak staves.

The sizes required are:—

66 in. long	x	3 in. thick	x	6 in. wide.
54 "	x	$1\frac{1}{4}$ "	x	4 to 6 in. wide.
44 "	x	$1\frac{1}{4}$ "	x	4 to 6 "
38 "	x	$1\frac{1}{4}$ "	x	4 to 6 "
33 "	x	$1\frac{1}{4}$ "	x	4 to 6 "

The staves would have to be supplied exactly to the sizes given, and it is essential that they should be free from shakes (splits) and sap, as any portion of the wood containing sap would be utterly useless. By this mail a special inquiry is being forwarded on behalf of an Australian importer to the Superintendent of Commercial Agencies, Ottawa, from whom all details can be obtained, and in view of the large orders likely

to be placed, I trust that Canadian manufacturers of oak staves will avail themselves of this exceptional opportunity which may secure the bulk of the trade in these markets.

MONTREAL POTASH AND PEARL ASH.

While it is true that highly refined European potash has the bulk of the Australasian imports, yet there remains a comparatively limited demand for Montreal potash throughout the Commonwealth and New Zealand, which should be worth the attention of some enterprising Canadian manufacturer. This product has hitherto been imported in strong casks containing about 7 cwt. (784 lbs.). There is also a demand for pearl ash in casks containing about $4\frac{1}{2}$ to 5 cwt. (504 to 560 lbs.). A special inquiry for these lines is being sent by this mail, on behalf of a Melbourne importer, to the Superintendent of Commercial Agencies, Ottawa, from whom all details can be obtained by Canadian exporters of Montreal potash and pearl ash.

EMPLOYMENT FOR AUSTRALIAN PRISONERS.

The task of providing profitable employment for prison inmates has been rendered more difficult to the state authorities throughout Australia by the recent action of the Commonwealth government restricting the use of prison-made articles by the various departments. In reply to questions in parliament, it was stated that when the present supplies of prison-made mail bags were exhausted the future requirements would be obtained from other sources, and a similar policy was indicated in connection with the Defence Department. When not supplying government wants, prison labour is turned to uses not competing with outside manufactures, and there is great difficulty in achieving the double object of providing employment for prisoners which will prove profitable and at the same time training them to some useful trade which will be to their advantage when liberated.

THE 'NEW PROTECTION' PROPOSALS OF THE AUSTRALIAN GOVERNMENT.

In opening the debate, on October 1, in the Commonwealth parliament, upon the tariff proposals, the Acting Prime Minister (Sir William Lyne) outlined the scheme of 'the new protection' under which it is proposed by the government that Australian manufacturers whose manufactures are protected by the recently imposed higher customs duties (now under parliamentary consideration), shall only enjoy that advantage on condition that a fair rate of wages is paid to their operatives. Briefly, 'the new protection' conditions are as follows:—

(a) All dutiable goods bearing the Commonwealth trade mark as a guarantee that they have been manufactured in Australia under fair and reasonable conditions as to remuneration of labour will be exempt from excise.

(b) All goods made in Australia not bearing the Commonwealth trade mark will be subjected to excise duty at the rate of half the duty on the imported goods.

(c) A board of excise, to consist of three members, to be appointed to give effect to the proposal.

(d) All goods manufactured under conditions which are in accordance with a state or Commonwealth industrial award or agreement, or which are declared to be fair and reasonable by the newly created board of excise, will be entitled to have the Commonwealth trade mark affixed to them.

The proposals received a rather favourable reception, although, obviously, the chief difficulty in the scheme is to determine what are fair conditions as to the remuneration of labour. The bill embodying the proposals has not, so far, been introduced into parliament.

PRINCIPLE OF PREFERENTIAL TRADE AFFIRMED.

For a time it was doubtful if the Commonwealth parliament would endorse the preferential trade proposals (embodied in the 1907 customs tariff) extended to certain

goods the produce or manufacture of the United Kingdom. It is satisfactory to report, in view of a reciprocal trade agreement between Canada and Australia, that the principle of preferential trade was recently affirmed by the House of Representatives.

REVISION OF AUSTRALIAN CUSTOMS TARIFF, 1907.

Up to this date the Commonwealth House of Representatives has passed—in some instances amending the duties—the first 44 items in the new customs tariff. The only item taken out of regular sequence was that of wire netting (187), the duty upon which the government proposed to be 30 per cent in the general tariff and 25 per cent in the U.K. preference—these duties were reduced by parliament on October 11 to 10 and 5 per cent respectively. The debates are likely to be protracted, and it will probably be some months before the tariff revision is completed.

PROSPECTS OF AUSTRALIAN WHEAT CROP, 1907.

Forward business in new wheat has not been active, and in the present condition of the markets such business involves considerable risk to both sides. If the Commonwealth harvest results in a yield of 30,000,000 bushels (against about 68,000,000 bushels for 1906-7, there would be an apparent surplus of about 5,000,000 bushels after providing for Commonwealth consumption for the new season. To this surplus of 5,000,000 bushels or thereabouts may be added stocks of old wheat and flour to be carried forward. Any estimate of the Australian crop at present, however, is subject to variation, as a good rainfall in Victoria and South Australia during the next week would make a substantial difference in the outlook. Without rain, the South Australian crop would probably yield about five bushels per acre, or a total of 10,000,000 bushels: but with a good early rain the yield would probably reach 14,000,000 bushels, or an average of seven bushels.

The Western Australia harvest promises to furnish a surplus of about one and one-half millions after providing for domestic consumption in that state. The Victorian crop, if it reaches 8,000,000 bushels, would practically give no opportunity for export business. The prospects are that several of the Australian states will require to import substantial quantities of wheat within the next nine months, and the cost of importing from abroad—in the present state of the world's markets—would be in the vicinity of 6s. 3d. (say \$1.52) per bushel duty paid.

ADVANCE IN PRICES OF WHEAT AND FLOUR.

The mail closes with an exceedingly firm market, and from day to day, during the last week, prices for wheat and flour have steadily advanced, until to-day's Melbourne quotations are nominally, wheat, 5s. 9d. (\$1.39) per bushel for f.a.q., and flour, £12 (\$58.40) per ton.

AUSTRALIAN INQUIRIES FOR CANADIAN OATS AND BARLEY.

Some of the leading Australian grain and produce dealers are now negotiating, by cable, for supplies of Canadian oats and barley. Several firms have obtained from this office the addresses of Canadian exporters and other particulars with the view of importing oats from Vancouver. Exporters of wheat, oats and barley from British Columbia ports may find it to their advantage to keep closely in touch with this office, and in the first instance sending standard samples, naming cable codes used and other necessary details.

AUSTRALIAN TRADE CONDITIONS.

On account of the continued dry weather, country retailers are restricting their purchases in view of the poor outlook for the crops in many localities. Uncertainty in respect to the revision of the customs tariff is interfering with the placing of orders for Canadian and other oversea goods. While the imports and exports have so

far this year, with few exceptions, exceeded in value those of the similar period of last year, yet there appears every probability of a considerable decrease for the balance of the year. Otherwise trade is sound, and the purchasing power of the Australian people was never stronger than it is to-day.

D. H. ROSS.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(*Mr. E. D. Arnaud.*)

GAZETTE BUILDING, ST. JOHN'S, November 26, 1907.

LABRADOR EXPORTS, 1907.

The Customs Department has issued the following statement of the exports from the Labrador coast for the season just closed, in codfish, salmon and other products of that portion of the colony, which show that the total trade differs very little from that of the preceding year, notwithstanding the fact that during the earlier portion of the fishing season complaints were made of poor voyages on the northern part of that coast.

The following are the figures given:—

Dry codfish..	289,493 qtls.	\$1,013,227
Salmon..	715 tes. and 1 brl.	16,057
Trout..	121 brls.	968
Cod oil..	7½ tuns.	437
Seal oil..	6½ tuns.	562
Herring..	28 brls.	112
Dried caplin..	1 brl.	1
Feathers..	233 lbs.	30
Whale bone..	320 tons	2,560
Lumber..	1,753,451 feet	26,301
Furs..		33,487
		<hr/>
		\$1,093,742

DRY CODFISH.

The 289,493 qtls. shipped this year went to the following countries:—

	Qtls.	Value.
Gibraltar for orders..	78,832	\$275,913
Spain..	86,213	301,746
United Kingdom..	20,820	72,870
Italy..	71,909	251,681
Portugal..	6,503	22,761
Canada..	1,925	6,738
Greece..	23,291	81,518
		<hr/>
		\$1,013,227

COMPARATIVE STATEMENT.

1906..	250,887 qtls.	\$1,030,432
1907..	289,493 "	1,013,227
Increase for 1907..	38,606 "	Decrease 17,205

E. D. ARNAUD.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., October 31, 1907.

SCHOOL FOR JEWELLERS AND SILVERSMITHS.

A school is in existence in Birmingham, particulars of which may be interesting to Canada. It is termed the 'School for Jewellers and Silversmiths,' and is under the control of the Museum and School of Art Committee of the Corporation. It is considered highly successful, and it was largely due to the efforts of the Jewellers' and Silversmiths' Association of Birmingham that the school was founded.

ITS OBJECT.

The object of the school is to provide an artistic training for apprentices and craftsmen engaged in the local metalwork trades; and to supplement the mere manipulative skill in one particular branch of a craft, which the workman acquires in the manufactory, by a training in design and by a complete and comprehensive knowledge of the principles of the craft.

STUDENTS.

About 600 apprentices and other employees are enrolled during the session. Most of these can only attend the evening classes, but many of the manufacturers send some of their apprentices to the afternoon classes.

Arrangements have recently been made by which the head teachers of the local elementary schools may send to the Jewellers' School, on one half day a week, all scholars in their 6th and 7th standards who propose to become jewellers or metalworkers.

EQUIPMENT.

The school is well equipped for practical exercises in all the various branches of goldsmiths' and silversmiths' work and die-sinking. All tools, apparatus and materials are supplied by the committee.

COURSE OF STUDY.

For jewellers the following subjects are taught. Drawing from nature, lettering, design, drawing from life, history of metalwork, engraving, enamelling, damascening, inlay, metal-colouring, enamel making, mounting, setting, carving, saw-piercing, chasing, repousse, lectures on processes and precious stones.

For silversmiths,—the above subjects, mounting, embossing, raising, and lectures on processes.

For die-sinkers,—elementary and advanced modelling from plants, foliage, animals and the human figure; modelled design, chipping, die-cutting, stamping, mounting.

SESSION AND FEES.

There are two terms—autumn term and winter term. The fees for ordinary students attending during the day are \$6 for the term; if attending evenings only,

84 cents per term. Employers who are members of the Jewellers' and Silversmiths' Association have the privilege of sending students to any of the classes for half the ordinary fee, the association paying the other half.

PRIZES.

The committee award special prizes for attendance and progress, and the Board of Education also award medals and book prizes for the best work.

EXHIBITIONS.

An exhibition of students' work is held at the school annually.

EXAMINATIONS.

Students are entered for the technological examinations conducted by the city and guilds of London Institute, and certificates awarded by the institute are acknowledged by the Board of Education and by the metal-work trades.

COST.

The cost to the Jewellers' Association is about £500 per year, and to the rates about £1,700.

COMMERCIAL MOTOR VEHICLE AWARDS.

Referring to my report on the above subject, and published in Weekly Report No. 193, of October 7, 1907, the Royal Automobile Club have just made the awards in connection with the trials. In all, ten gold medals were awarded, the recipients including members of each of the seven classes. In class A, the award went to a Unic motor-van carrying 10 cwt. In class B, both Lacre vans of one ton capacity were successful. A Thorneycroft lorry obtained the gold medal in the 30-cwt. class, as also did the Halley and the Milnes-Daimler lorries in class D, carrying two tons each. In the 'heavy weight' classes, E and F, two vehicles were successful in each. The three-ton gold medalists were the Hallford lorry and the Maudsley miller's dray; whilst in the five-ton class both the winners were steam-driven vehicles, a lorry by Messrs. Savage Bros., Limited, and one by the Yorkshire Patent Steam Wagon Company, Limited. Lastly, in class H, this being Burrell's steam tractor.

Though the above gold medals stand out most prominently in the lists, it must be mentioned that six vehicles were awarded silver medals for their excellent performances.

SPECIAL PRIZES AND ARMY AWARDS.

Two special prizes were awarded, and these are particularly worthy of note. The first was that offered by Mr. Worby Beaumont, for 'simplicity and freedom from liability to disarrangement, &c.,' conditions which the judges held to be found particularly well fulfilled in the case of a 30-cwt. Halley van. The second special award was offered for 'cleanliness in connection with the dropping of oil' by the Commercial Motor-users' Association. This was obtained by the De Dion three-ton lorry. In a special class altogether come the awards of the Army Council, which has decided to grant two diplomas. The first award goes to 'a lorry built by Messrs. Thorneycroft, Limited, capable of carrying 30 cwt., on account of the successful use of petroleum fuel in a four-cylinder internal combustion engine, as it is considered that an engine of this description is most suitable for army use.' In addition to carrying off the R.A.C. gold medal, the Maudsley motor also obtains one of the Army Council's diplomas 'on account of the accessibility of the working parts of the engine, which is a very valuable feature from a military point of view.'

P. B. BALL.

TARIFF CHANGES

SOUTH AFRICAN CUSTOMS UNION.

I.—EXTENSION OF REBATES OF CUSTOMS DUTIES TO GOODS FROM NEW ZEALAND.

(*The Cape of Good Hope Government Gazette—Extraordinary, of December 29, 1906.*)

A proclamation No. 515, dated December 29, 1906, of the Governor of the Colony of the Cape of Good Hope, and of the Territories and Dependencies thereof, proclaims, declares and makes known, that the Government of the said Colony and other Parties to the South African Customs Union Convention have, in terms of Article 4 of the said Convention, extended the rebates of Customs duties granted on goods and articles the growth, produce or manufacture of the United Kingdom, as from the 1st January, 1907, to goods and articles, the growth, produce or manufacture of New Zealand, the Government of the said Colony having extended to goods and articles the growth, produce or manufacture of the South African Customs Union reciprocal privileges.

II.—TRANSVAAL CUSTOMS NOTIFICATION NO. 311, DATED 4TH APRIL, 1907, RESPECTING THE REDUCTION OF ADDITIONAL DUTY ON SUGARS FROM ROUMANIA.

(*Transvaal Government Gazette of April 5, 1907.*)

It is hereby notified for general information that the special additional duty on sugars imported from Roumania has been reduced to the following rates:—

	S.	D.
Sugar, raw 100 lbs.	5	6
Sugar, refined “	7	3

To take effect from the date of publication of this notice.

III.—TREASURY (CAPE TOWN) NOTICE NO. 559, DATED MAY 18, 1907, AS TO THE REDUCTION OF THE SURTAX LEVIABLE ON ROUMANIAN SUGARS.

(*The Cape of Good Hope Government Gazette of May 21, 1907.*)

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve, under the provisions of Act No. 1 of 1906, of the surtax fixed by Government Notice No. 231, 1905, on sugars of Roumanian origin, being reduced to the following rates, as from the 1st of April, 1907:—

	S.	D.
Sugar, raw 100 lbs.	5	6
Sugar, refined “	7	3

IV.—CUSTOMS NOTICE NO. 1210, OF JULY 10, 1907, RESPECTING DUTY ON BEER BREWED, AND SPIRITS DISTILLED, IN ANY OTHER COLONY IN THE CUSTOMS UNION IMPORTED INTO THE CAPE COLONY.

(*The Cape of Good Hope Government Gazette of July 19, 1907.*)

Notice is hereby given that, under the provisions of Section 5 of Act No. 1 of 1906, a duty of Customs is levied on Beer brewed, and spirits distilled, in any Colony or Territory in the Customs Union, imported for consumption in this Colony; and

that every importer thereof is required, before he accepts delivery, to proceed to the Office of the Civil Commissioner or Resident Magistrate of the District (where there is no Custom House) and pay the Custom Duty on such Beer or Spirits, and have the Customs Union "Advice to Consignee" (Form D) duly certified to that effect.

Importers are further warned that should they accept delivery of any such Beer or Spirits—the duty not having been paid—it will be regarded as being illegally imported, and they will be liable to the penalties provided for by law.

The import duty on such Beer and Spirits is as follows:—

On Beer, 3d. per gallon.

On Spirits:—

(a) The produce of the vine, 6s. per proof gallon.

(b) Other than the above, 10s. per proof gallon.

V.—ACT NO. 10, OF 1907, TO PROHIBIT THE EXPORT OF OSTRICHES AND OSTRICH EGGS.

[ASSENTED TO ON 19TH, PROMULGATED ON 20TH AUGUST, 1907.]

(*The Cape of Good Hope Government Gazette Extraordinary of 20th August, 1907.*)

Whereas it is desirable to prohibit the exportation of Ostriches and Ostrich Eggs from this Colony: Be it therefore enacted by the Governor of the Cape of Good Hope, with the advice and consent of the Legislative Council and the House of Assembly thereof, as follows:—

1. Act No. 24 of 1884, intituled the "Ostrich Export Duty Act, 1884," is hereby repealed.

2. It shall not be lawful to export any Ostrich or Ostrich Eggs, except as herein-after provided, to any place beyond the limits of this Colony or to any country separated therefrom by sea: provided, however, that this prohibition shall not apply to the export of any Ostrich or Ostrich Egg to any neighbouring Colony or State which, shall, by its own Legislature, have similarly prohibited the exportation of Ostriches and Ostrich Eggs, subject to the aforesaid exemption to any neighbouring Colony or State, and under a penalty not less than that provided for by this Act.

3. Every person who shall contravene the provisions of this Act by exporting any Ostrich or Ostrich Egg (except as hereinbefore excepted), shall on conviction be liable to imprisonment with or without hard labour for any term not less than twelve months nor more than two years.

4. All penalties under this Act may be enforced in the Court of the Resident Magistrate of the District in which the offence was committed.

3. This Act may be cited for all purposes as the "Ostrich Export Prohibition Act, 1907."

VI.—TREASURY (CAPE TOWN) NOTICE NO. 1134, DATED 12TH OCTOBER, 1907, RELATING TO REBATE OF CUSTOMS DUTIES ON GOODS REMOVED TO GERMAN SOUTHWEST AFRICA.

(*The Cape of Good Hope Government Gazette of October 15, 1907.*)

His Excellency the Governor, with the advice of the Executive Council, under and by virtue of Section 15 of Act No. 1 of 1906, has been pleased to notify that, on and after the 15th day of October, 1907, a Rebate of Customs Duties to the extent shown in the Schedule hereunto annexed shall be granted to Goods entered, whether on first importation or *ex* a Bonded Warehouse, for removal overland to German Southwest Africa, in accordance with the Regulations from time to time prescribed in that behalf.

SCHEDULE.

On all goods, wares, or merchandise chargeable with duty under Classes I., II., III., IV., and VI., of the Schedule B to "The Customs Amendment and Tariff Act, 1906," a Rebate shall be allowed to the extent of the difference between the duties specified in the aforesaid Classes to the aforesaid Schedule, and a Transit Duty of Three Pounds Sterling per centum of the value of such goods, &c., and such Transit Duty of 3 per cent *ad valorem* shall be the duty less rebate to be paid on such goods, &c., except as to the following articles, viz.:—

Spirits, namely:—(a) Liqueurs, Cordials and Mixed Spirits exceeding 3 per cent of Proof Spirits, on which a rebate shall be allowed to the extent of 17s. per Imperial gallon, and the duty less rebate to be paid shall be 3s. per Imperial gallon. (b) Other potable Spirits containing more than 3 per cent of Proof Spirit on which a rebate shall be allowed to the extent of 15s. 6d. per Imperial proof gallon, and the duty less rebate to be paid shall be 3s. 6d. per proof gallon; provided that no allowance will be made for underproof in excess of 15 per cent.

Wines:—On which a rebate shall be allowed of the difference between 1s. 6d. per Imperial gallon and the duties thereon as set forth in Class I., item 41 (a), (b) and (c), of the Customs Union Tariff and the duty less rebate to be paid shall be 1s. 6d. per Imperial (b) gallon.

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, cr, and more preferable, c.i.f. at foreign port.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, October 29, 1907.

THE DROUGHT.

In my report of October 1, the dry weather for the previous two months was referred to, and it was also stated that there were poor prospects of early rains, which were badly needed. Unfortunately, the facts have been in accordance with these indications. The rainfall for October has been very light, especially in the dairying and wheat-producing districts of New South Wales. The rainfall in July, August and September, which so largely determines the crops and summer pasturage, except in the west of this state, have been very much below the average. In Sydney, where the average for this month is over 12 inches, there was a rainfall of less than 1 inch. In the far west, which is solely a pastoral region, the rainfall, though not heavy, was better. There is a difference of opinion as to the conditions. The heavy rainfall of June have so far marvellously supported vegetation, but drought conditions are generally prevalent. The best authorities agree that there is no possibility of there being more than a half crop of wheat in this state with the probability, that unless there is a change in the weather conditions for the better, there will be not more than one-third of last year's crop harvested. Victoria and South Australia, the other wheat-producing states, are also seriously affected; Victoria nearly as badly as New South Wales; South Australia, for the present, not quite so badly. The yield of the last harvest throughout Australia was estimated at 67,000,000 bushels. It is hardly possible that more than 30,000,000 bushels will be obtained this year, which, with the surplus of last year's stock, will just about supply home consumption. Very much depends on what the weather will be for the next two weeks, but as I write I have to repeat the statement in the report of four weeks ago, that there is little immediate promise of good rains.

A month ago the prospect was that the year would be the most prosperous one that the dairying industry of Australia had experienced, but already, the export of butter has fallen off greatly and must shortly cease altogether. Cattle have been fed for a month from food which had been stored up to meet such contingencies, and in some places, where only a limited provision had been made, these stocks have already been exhausted.

CANADA AS A SOURCE OF SUPPLY.

In view of the possibility of the dry weather becoming a prolonged drought, there have been some inquiry for food stuffs from Canada. Whether there shall be any demands and what their extent, will depend upon the extent of the drought, and something upon the duties in the new tariff. The first demand would naturally be for a strong wheat flour. The principal mills of Canada, which can supply this requirement, are well represented here. The next requirement will be wheat. Several firms have already begun negotiations with Canadian firms to secure supplies when required. If arrangements for shipping at Vancouver are made, there should be a demand for

the softer wheats, grown upon the eastern slopes of the Rockies and the Pacific slope, to supply mills which are better equipped for grinding this wheat than the hard wheat of the Northwest. Oats have already been in demand, not only in Australia, but for some time in New Zealand where last year's crop was a poor one. So far, the probabilities favour a fair season for New Zealand, but the oat crop of that Dominion will not come into market until March next. It is not likely that the oats of Canada, in view of the duties and also still more of the fact that they are not liked for feeding purposes, will experience a very large demand unless the drought should be very severe and prolonged. But already there has been inquiries for oats for milling purposes, as for this purpose, their value has become known. It is possible, too, that there may be a market for high grade Canadian barley. The barley of Canada is unknown here and unless the need is great, the average barley of Canada is not likely to find much favour. The heavy barley of California is well known here, and has been long imported for malting purposes. If Canada can supply a grade similar to it, there is no doubt that it would find a demand. Another possibility is potatoes. At the present writing it is too early to form any opinion as to what the potato crop of Australia will be. The bulk of the yield is grown in southern Victoria and Tasmania, where the weather conditions have been much more favourable than in the eastern portions of Australia. A similar statement can be made respecting onions. As other vegetables under drought conditions fail, the onion becomes very valuable and the local production may not meet the requirements.

It may be, too, that if the drought be prolonged, butter will be inquired into, though not for some time to come. During the last drought there was a considerable importation of frozen pork as there was then no duty upon it. The new tariff, as it stands, imposes a duty of 2d. per lb., which renders it improbable that it is likely to become an importation from Canada. However, all depends upon the weather for the next three months. Canadians who desire to share in this business, should at once arrange with the importers here for it, as the demand will be made by cable, and those who wait to make arrangements when the demand has been made, will likely be out of the business. During the drought of 1902-3 Vancouver completely failed as a shipping port and Canada did but one-tenth of the trade that she should have done, had the suggestions made from this office, been acted upon. I should be glad to receive samples of wheat and oats, particularly of wheat of the softer variety, with prices at the moment subject, however, to change, from any one who wishes to share in the possibility of the trade that may arise. Owing to the indifferent manner with a few exceptions in which orders during the last drought were filled, Australian houses now demand an assurance that agents in Canada can be depended upon, and it might be well, therefore, that firms not well known here who wish to engage in this trade, should send references or such credentials as would be acceptable here.

PRICES.

The prices of products have not yet reached an import basis, but they have rapidly advanced in two months. Wheat has gone up from 3s. 9d. to 5s. 7d. per bushel; flour from £8 10s. to £12 per ton, both in Sydney and New Zealand. Oats are quoted at 3s. 4d. to 3s. 6d. per bushel. Potatoes have rapidly advanced and are now quoted at £6 10s. per ton, three times the price they were in August last.

THE TRADE OF 1902-3.

In order to emphasize the importance of being ready, it may be well to recall the experience during the drought year of 1902-3. In May, 1902, I not only reported to the government, but memorialized the chief boards of trade of Canada respecting the prospect of business in food stuffs, owing to the drought that threatened the harvests of the year and asked for communications from those who might be prepared to undertake the business. In response I received but two replies. I also interviewed leading

firms of this city. Some of them sent their agents to Canada, who returned reporting that they found it impossible to interest Canadians in the trade and to make the necessary arrangements. They had been obliged to negotiate with firms in the United States. It was not surprising, therefore, that Canada failed to secure very much of the drought trade. The following were the total importations into Australia and from Canada for the year 1902-3, as given in the Australian returns:—

	Total Importa- tions	From Canada.
Barley, bushels.....	1,417,972	
Oats, bushels ..	3,103,961	88,506
Wheat, bushels.....	9,290,623	57,110
Flour, tons.....	80,942	20,332

The chief breakdown was in transportation. The mail steamers were full, but no other ships had been arranged for and none were obtainable except one sailing vessel, sent out at so late a period, that there was a heavy loss upon its cargo. More of the products of Canada than is given in this table were imported. But flour, oats and wheat had to be obtained from United States mills, grinding Canadian wheat and through United States ports, Canada losing the profit of the business.

TRADE PROSPECTS.

In addition to the droughty conditions which threaten the farming, dairying and pastoral industries alike, there is this year the probability of a decreased output of wool. Up to a short time ago it was anticipated that the shearing this year would yield about the same quantity as last. It is now admitted that it will be, as a whole, less in quantity and not equal in quality. How much less, experts are not agreed, but probably 100,000 bales below the production of 1905-6. The heavy reduction in the price of copper, lead, tin and silver will also seriously affect the value of these articles and the quantity exported. If low prices should rule for some time, it will mean the closing of mines that otherwise would have to be worked at a loss. There is also a decrease in the yield of gold, but this may change at any moment. Against this, there is a strong demand for coal at advanced prices. Under these conditions, particularly in view of a possible high tariff, there will be a lessened importation of goods. Australia has had four excellent seasons and enjoyed for two years very great prosperity. It can stand, therefore, without serious inconvenience, one or two poor years. If the demand for goods should somewhat decrease, there is no doubt that the country will be able to pay for all that it asks for.

DESICCATED EGGS.

Publication has been given to a process devised in Melbourne, but carried out in Sydney, for desiccating eggs. For this process, high claims are made. It has been thus described:—

'Desiccated eggs are not substitutes for eggs, but newly laid eggs treated by a process by which only the shell and water contents of the egg are removed, and the whole substance of the egg, yolk and albumen converted into powder. The eggs first pass through a dark room, being carried on a perforated rolling table over a 50 candle-power light. Any eggs not perfectly fresh, or dirty in any way, are at once detected and put on one side. The sound eggs are carried along and go into a centrifugal separator, revolving at a tremendous rate. Here the eggs are smashed, and the shells separated from the liquid matter which flows into a small tank, and is then pumped up to another tank, where a preservative is added. Below this tank, in a very hot

room, with a temperature of 120 to 130 degrees, there are great cylinders, or drums, slowly revolving at the rate of 1 to 2½ minutes. The liquid egg substance goes from the tank into troughs below these cylinders, and as they revolve become attached to them. By the time a cylinder has completed its revolution the coating has dried, and a further coating adheres. Ultimately this coating comes off in flaky pieces, which are ground into a powder. This powder will, it is claimed to have been proved, keep for years, and only requires the addition of milk or water, when the powdered eggs will reconstitute, and be ready for use for any purpose the same as a newly laid egg. The powder is rich and attractive looking, and is reported by the government analysts of New South Wales and Victoria to contain no chemical preservative. No part of the egg, except the water, has been removed.

In all probability an account of this process will reach Canada. There is no question that if it were perfect, as the newspapers state, it would be of great value in Canada as in Australia. It must, however, be added, that the process is not yet perfected. The inventor has some difficulties still to overcome before it can be a commercial success; one of which is the reduction of the dried egg to powder. It is hoped that this and other obstacles to success will shortly be overcome. If so, the appliance should receive consideration in Canada where a cheap process of preserving eggs would be most useful.

SALMON DELIVERIES.

In the contracts made by the Alaska Packers' Association with their Australian purchasers, there is this clause: 'Right is reserved to sellers, in case of damage to catch, or failure to make the full pack, of any or all of the goods named, to deliver pro rata, to the purchasers whose orders are received prior and up to the time of the beginning of the pack of each article named.' Some time ago the association's agents notified customers here that there would be a very short supply of salmon, but that the usual quantity would be reserved for the Australian requirements. A little time ago a second notice was sent out to the effect that only one-fourth of the orders could be filled. As some of the contracts were signed after the commencement of the salmon fishing, it is under consideration whether the reserved clause applies and whether the association is not under legal obligations to deliver the full amounts.

AN APPRECIATION OF CANADIAN METHODS.

In contrast to this there has been published the action of the British Columbia Packers' Association, which has written to its agent: 'In order to fill orders now in hand we have been obliged to purchase some 12,000 cases, in some instances at a direct loss to ourselves. We have established a reputation here, and hope also on your side, of filling all orders to the best of our power, and although by cutting down deliveries pro rata we could make an extra 3s. per case on the balances thus secured, we will protect all our buyers to the last case we have or can buy.'

Where Canadian business methods have so often been criticised, this action of the British Columbia Packers' Association is worthy of notice, and it is to be hoped that the losses incurred by it will be repaid in future years through the added confidence in its business methods.

DUTY ON CATALOGUES.

An inquiry has reached me respecting the duty on catalogues or on advertising matter sent to Australia. The duty at present is 6d. per lb. But there is a possibility that it will be changed before the tariff finally passes. I have made an application to the Department of Customs of the Commonwealth that should there be a duty fixed upon advertising matter, an arrangement may be made, that when mailed in Canada

there shall be a provision whereby the duty could be pre-paid there. I am given to understand that the matter is under consideration. I hope that a special duty stamp may be provided which could be sold in Canada and affixed to the documents when mailed.

The duty on printed matter in New Zealand is 3d. per lb. But there is an important and liberal exception whereby it is declared that this duty shall not apply to trade catalogues or price lists of the goods of firms or persons having no established business in New Zealand. It will be seen, therefore, that there is no difficulty in sending such matter to New Zealand. If the Canadian firm has an established house, the matter should be addressed to it and it would pay the duty. But if it has none, no duty will be levied.

INLAND FREIGHTS.

The Customs Department has issued the following order :—‘Satisfactory evidence having been produced that the proportion of freight rate from Hamilton, Canada, to Niagara, on goods in transit to New York, is 4.37 cents on 100 lb. (per car load), the Customs order bearing on the subject has been amended accordingly.’

Apparently, this is intended to cover all classes of freight emanating from Hamilton and will be the dutiable rate of freight by whatever route goods may be shipped, to Australia. It must be remembered that this is a temporary arrangement and will be altered when evidence is given to show that the proportion of the freight rate to New York is higher or lower than that now fixed upon. There is still much confusion in respect to the proportion of the freight on which duty is charged in the minds of Canadian shippers. For example, from Peterborough the inland freight is charged via Niagara Falls. Its nearest port would be Port Hope and, if the matter, I think, were properly taken up, it should pay duty upon the proportion of the freight from Port Hope. The ruling is that the charge shall be that to the nearest Canadian port of export.

WEATHER PROSPECTS.

At the closing of the mail the weather bureau forecasts more favourable prospects for some rain upon the droughty districts. But it has no assurance that the anticipation will be realized. The probabilities, on the whole, are rather against it. A number of firms in the anticipation of the necessity of importation of foodstuffs have cabled to Canadn. I regret to say that so far as I can obtain information, the replies have all been most unsatisfactory; not a quotation having been received. There, perhaps, are circumstances that justify this failure to give some price, but it is in striking contrast with the result of inquiries made elsewhere.

J. S. LARKE.

BIRMINGHAM.

REPORT OF COMMERCIAL AGENT.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., November 12, 1907.

MUNICIPAL TECHNICAL SCHOOL.

The above school exists for the purposes of carrying out a liberal scheme of technical education. It is open both day and evening, and male and female students are eligible for admission. The school contains elaborate workshops and laboratories, and among the many subjects taught, the following are chief :—chemistry, metallurgy, physics, engineering, electrical engineering, building construction, brasswork, mathematics, telegraphy, cookery, dress-making, &c.

CONDITIONS OF ADMISSION.

All the classes, excepting the special classes for women, are open to students of either sex. Students in attendance at secondary schools, or who are under 14 years of age, are admitted only by special permission of the principal.

FEES.

The fees range from 2s. 6d. (60 cents) to £1 (\$4.86) and are made payable in advance.

EXAMINATIONS AND AWARDS.

The work at the end of the session is examined by examiners specially appointed by the school committee, by the Board of Education or by the City or Guilds Institute of London. The Board of Education grant certificates to successful students, the City and Guilds of London Institute award first and second class certificates to students in technological subjects; the Board of Education also award a number of King's Prizes of books, instruments, &c., to the value of £2 each to the students doing best in a science subject, or mathematics, and bronze medals are given to all candidates who obtain a first class in honours. Bronze, silver and gold medals are given in the national competition for the best drawings in machine drawing and building construction. Seven Royal Exhibitions each of the value of £50 per annum for three years, with fees remitted, tenable either at the Royal College of Science, London, or at the Royal College of Science, Dublin. Twenty-two national scholarships, each of the value of £50 per annum for three years, with fees remitted, tenable at either of the two last named colleges. Six free studentships tenable for three years at the Royal College of Science, London, as national scholarships, but without any maintenance allowance. Many prizes are also offered by Birmingham Trade Societies, manufacturing firms, and private donors.

COST OF MAINTENANCE.

The following table gives the income and expenditure for the year ending March 31, 1906.

	£	s.	d.
Apparatus, chemical and class requiremenas	1,941	8	7
Cleaning materials and sundries	119	16	5
Furniture and fittings	131	16	0
General repairs and replacements	242	10	10
Gas, water and fuel	829	0	5
Maintenance and renewal of plant and machinery	193	12	5
Postages and incidentals	111	11	11
Printing, stationery, advertising, books, &c.	603	17	2
Rents, rates, taxes and insurances	838	6	6
Salaries of secretary and office staff	753	8	4
Scholarships, prizes, certificates, examination expences	313	11	10
Teachers' salaries	6,628	8	0
Wages and uniforms of industrial staff	1,689	15	3
Damage by fire	85	17	5
Special purchase of books for library	46	16	7
Superannuation allowances	265	10	9
Return of contributions to Superannuation Fund	0	5	9
Interest on loans	2,191	11	0
Sinking fund	3,876	11	5
	20,863	16	7
Grant from Board of Education	£3,222	17	0
Class fees	1,416	9	6
Examination fees	28	15	6
Prizes, donations for	96	0	0
Sales of apparatus	164	1	6
Hire of rooms	68	19	6
Miscellaneous receipts	3	4	7
Donation from W. Butler, Esq.	50	0	0
" " H. Lewis, Esq.	100	0	0
Contributions for superannuation	165	14	7
* Balance being expenditure in excess of income for year ending March 31, 1906	15,547	14	5
Total	20,863	16	7

The exchequer contributions under the local taxation (Customs and Excise) Act, 1890, amounting to about £13,000 per annum, were credited to the school account previous to Education Act 1902, but this amount now appears as part of the general income of the Education Committee.

The school is under the management of the City of Birmingham Education Committee, and is subject to the same rules, and enjoys the same financial benefits as the other schools in the district.

It would occupy too much space to give the details of the subjects taught, and the methods of teaching, but if fuller information is desired with regard to the technical school I shall be pleased to forward it to interested parties.

NEW RAILWAY SIGNAL SYSTEMS.

From time to time I have forwarded particulars of new railway signal systems experimented with in Great Britain. One of the more recent attempts to evolve a system of cab signalling on locomotives has been made on the South Eastern and Chatham Railway, sections of which are often worked under the inconvenience of thick fogs. For some time past an experimental section has been in operation between Norwood and Beckenham Junctions, and it has recently been examined by Major Pringle, of the Board of Trade.

In this instance the engine cab is fitted with miniature home and distant signals, and also a bell and telephone. Two pairs of shoes beneath the engine make contact with a length of rail in the track, completing an electric circuit between the engine and the signal-box, and reproducing the line signals in the cab of the engine. At the same time duplicate miniature signals are operated in the signal-box. There is the signal man has this signal reproduced, and he and the driver are at the same time signalman has this signal reproduced, and he and the driver are at the same time placed in telephonic communication.

A system of signalling designed to repeat the signals on the engine is also being tested on the Wirral Railway. In this case also the completion of an electric circuit given audible and sight signals in the cab of the engine.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND,

YOKOHAMA, November 14, 1907.

MONTHLY RETURN OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the Monthly Return, for the nine months ending September 30, of the present and the previous year:—

EXPORTS TO CANADA.

	1907.	1906.
Silk, raw	\$ 15,378	\$118,050
Silk tissues, habutal	153,674	190,005
Silk handkerchiefs	77,688	73,000
Cotton tissues	1,839	3,000
Mats and matting for floor (Hanagoza)	44,096	31,000
Porcelain and earthenware	87,048	64,000
Lacquered ware	7,344	7,777
Tea	427,829	29,000
Rice	197,072	10,000
Sake	20,483	10,000
Straw plaits and chip braids	549	10,000
Camphor	1,600	2,000
		6,623

IMPORTS FROM CANADA.

	1907.	1906.
Flour	\$114,377	\$62,015

The 'principal items' given in the Monthly Return number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items making up the aggregate of trade the Annual Return has to be awaited.

GENERAL TRADE RETURN.

Principal imports into Japan for the nine months ending September 30, of the present and the previous year:—

	1907.	1906.
Flour, wheat.....	\$2,320,395	\$3,391,758
Butter.....	36,565	74,741
Salted salmon.....	119,416	262,943
Condensed milk.....	712,769	541,736
Leather, sole.....	892,323	371,177
Lead, pig, ingot and slab.....	344,991	568,072
Printing paper.....	1,276,574	783,516
Cotton, duck.....	37,929	44,602
Cotton, prints.....	1,144,834	1,027,077
Cotton, satins and italians.....	741,628	894,027
White shirtings.....	492,339	539,506
Grey shirtings.....	2,908,674	3,339,643
Pulp.....	645,497	691,816
Manures, artificial and all others.....	8,452,482	7,186,714

Total Imports		Total Exports	
For nine months ending Sept. 30.		For nine months ending Sept. 30.	
1907.	1906.	1907.	1906.
\$187,688,718	\$162,217,177	\$160,552,827	\$142,924,771

THE RICE MARKET.

The rice harvest in Japan is going forward towards the finish. Reports indicate that the crop will yield at least ten per cent in excess of that of the average year. The highly speculative figures of the summer months have not been maintained. Subject to the effect of the estimated full yield, prices at the time of writing are quoted as follows:—

Tokyo Rice Exchange—

November delivery—Yen 16.62 per koku.
December “ “ 16.49 “
January “ “ 16.28 “

Kobe Rice Exchange—

November delivery—Yen 15.90 per koku.
December “ “ 15.91½ “
January “ “ 15.84 “

(1 koku=5 bush.)—(1 yen=50 cents.)

COMMERCIAL MORALITY.

There is no one topic incidental to trade with Japan that presents itself so persistently as that of the ‘commercial morality’ of the Japanese merchant trader. The subject is a rather extensive one in all its bearings. It is well known in Occidental countries that things generally are different in the Orient; and it is therefore a reasonable expectation that some things in their moral aspect should have at least an apparent difference, according to the point of view. An homogeneous people differ amongst themselves as to the moral quality of actions and opinions; therefore, where in life and living there is extreme dissimilitude, similarity of normal standards should be a matter of surprise.

Whether because of a change of ethical view, or on grounds of expediency, the Japanese give at least signs that, in that commercial intercourse with the world to which they are aspiring, it will be the part of wisdom to conform to the customs and

practices of the greater number. As they advance in experience they find that foreign trade brings its usages with it, and that the two things are inseparable.

A periodical, under the title of *Commercial Morality*, published at Kobe by Mr. Uno, himself a Japanese, describing the foreign trade of Japan as having 'recently made gigantic bounds,' says that 'commercial morality should be strictly maintained and improved for the sake of the country'; and, 'that there still exists in this country a class of merchants who are not only indifferent to this important doctrine, but who transact business with foreigners in such a way that it tends not only to damage their own reputation and future prospects, but creates a great obstacle to the foreign trade of Japan. This state of things left unchanged will seriously threaten the national interests.' And, accordingly, Mr. Uno, having, as he says, 'been in contact with the prevailing conditions in commercial circles for some years past,' knows whereof he writes, and has resolved to call public attention to the need of such change as the title of his publication suggests. Foreign firms, who are usually the complainants in this regard, he invites to communicate with him.

That a bargain is a bargain, the profit of which is to be taken, or the loss to be borne, whether the market conditions prove favourable or adverse, is a proposition that must be accepted as invariable by the commercial world. The Japanese are perhaps the most recent acquisition to the commercial sphere; and, considering what that change on their part involves, it is not fairly to their discredit that they should yet have some of the essentials to learn. There are two circumstances that seem to be especially the prolific cause of acts and charges of bad faith in business transactions in Japan. These are, first, the disposition to repudiate when the market takes an adverse turn; and, second, the disposition to repudiate under the plea of 'goods not being equal to sample.' These will both gradually disappear from the conduct of people who are not constitutionally dishonest, and with whom moral rectitude in private and public life is as cherished an element as it is elsewhere, where they claim that commercial morality does much more abound.

THE TEA CROP.

It has been ascertained, with probably fair accuracy, that the government order, forbidding the picking of fourth crop teas, has reduced the output for the present year to 32,000,000 pounds, against an average of 42,000,000 in previous years. The crop of Oolongs (Formosa) in addition to this is about 1,000,000 bags short of last year. The production, up to and including the third picking, is however quite equal to the average yearly yield, in Japan proper.

So far as the rivalry prevailing for some time past, and each season growing more acute, between the foreign and the Japanese firing and exporting interests, is concerned, it is not easy to judge which side may be described as winning. Now that the interval of the off season has been entered upon, it may be said from what can be heard and read that both are in the winning class. Which is quite satisfactory to the disinterested onlooker, who is satisfied so long as there is no danger of his tea being cut off.

THE TRADE MARK QUESTION.

In the course of much discussion, from time to time, it is pointed out that Japan is the only great commercial nation that does not extend reciprocal status or protection to trade marks. The Journal of the American Asiatic Association in this connection says:—

'Japan should recognize the necessity of outlawing a number of trade marks bearing Japanese names, which her subjects have fraudulently appropriated from their foreign owners. The fact that there exists in Japan a technical right for anybody to register a trade mark for which its owner has neglected to secure protection, and that legal ownership has thus nothing to do with priority of use, does not make the proceeding respectable, according to any recognized standard of international ethics.'

Cases in point are quite frequent, and no doubt discussion will in due time create a public sense of the justice and necessity of reform in this matter. To the Occidental mind the trade mark law as it is here, and its administration, are indefensible. But it is not reasonable to expect desirable changes in much more rapid succession than they have been coming for the latter two-score years. The disposition to right wrongs may be evident; but changes when offered are never free from complications, which, however, do not appeal to the insistent and perhaps suffering reformer.

I have a trade mark case now in view. One of the phases of usefulness attaching to this office has been that of attending to the registration of trade marks on behalf of Canadian clients or correspondents. Some few months ago two flour brands were forwarded here for registration, and duly put into the hands of a reputable patent agency that had given satisfactory service previously. In due course of time, quite recently, the information came from the Patent Office that the application was rejected because the same brands had been previously registered, giving the names of the parties who registered them, and the dates. I have now to convey to the Canadian owner of the brands in question the unsatisfactory intimation that what he thought was his property, in Japan became the property of others by their being the first to register.

GRAND EXHIBITION OF JAPAN, 1912.

Those nations that have announced their intention to take part in, or to favourably consider, the great exhibition that Japan is organizing, are given with the official answers in the following order: 1 Germany, 2 Mexico, 3 Canada, 4 New Zealand, 5 Great Britain, 6 France, 7 the United States.

Viscount Kaneko, the president, at a banquet given to a party of foreign journalists, in the course of his address referred especially to the press in the terms following:—

‘Gentlemen, I do not wish to magnify the importance of the press; but I feel that the success or failure of an international exhibition largely depends on what you, the representatives of the press, will do for it. It has been wisely said that ‘the St. Louis World’s Fair was built upon newspaper columns.’ I think that is true, and one may easily see from it what a vast influence you can exert. But in saying this, I do not mean to ask you to send abroad anything unduly favourable to us. What I want is simply to solicit your co-operation by reporting to the outside world those things which, in your judgment, our coming exhibition justly deserves to have mentioned.’

ALEX. MACLEAN.

MEXICO.

SPECIAL REPORT BY MR. A. W. DONLY, CANADIAN TRADE COMMISSIONER, UPON THE POSSIBILITIES OF TRADE WITH THE PACIFIC COAST OF MEXICO.

Prior to Mr. Donly's visit to Canada during the past summer, Mr. Donly was instructed to proceed to the Pacific coast of Mexico, in view of the recent establishment of a steamship service from British Columbia, to report upon the possibilities of extending Canadian trade in that part of the Mexican Republic. Immediately thereafter Mr. Donly visited Canada and has only recently, when about to sail for Mexico, been able to complete his report, which is published herewith for general information.

VANCOUVER, November 30, 1907.

THE NEW STEAMSHIP SERVICE.

After more than two years of negotiations, a contract was entered into during the last days of 1906 for the establishing of a service between Vancouver and Victoria and the Pacific coast ports of this republic. The service is now an accomplished fact. The *Georgia* and the *Lonsdale* are boats with a net register of a little less than two thousand tons, and a dead weight carrying capacity of about four thousand tons. The passenger accommodations are not extensive, but may be classed as good. In marked contrast to the boats of other lines trading on Mexico's west coast, the service is excellent. If the contractors continue their policy of providing first-class creature comforts for the traveller and are able to adhere to a uniform itinerary from month to month, there is no doubt but that the line will soon be the one most favoured by the travelling public and should be taxed to its utmost capacity in handling local passenger traffic between Mexican ports. The boats of other lines plying along the coast are both old and slow, and the service somewhat worse than indifferent.

A TRIP TO THE PACIFIC COAST.

In obedience to instructions received from the department, I left the City of Mexico during the latter days of April, bound for the west coast of the republic, for the purpose of studying the trade outlook in that district.

In speaking of the present physical conditions of such a trip, it may truthfully be said that it is not one to be undertaken for the mere pleasure of it by any one unused to long journeys on horseback. From Mexico City to Tuxpam, via the Mexican Central Railway, the journeying is pleasant enough, but from Tuxpam to Colima, twenty-five long leagues, is quite another story.

THE CONNECTING LINK.

As for the physical discomforts of the trip, they will soon belong to history, as the Mexican Central is now about to close up the last gap in their route, begun a few years ago, from Gaudalajara to the Pacific. Those in charge of affairs fully expect that the work will be completed and trains running from Manzanillo to the City of Mexico some time during the coming winter. The undertaking has been one of great magnitude, taking into account the physical difficulties to be overcome, and reflects great credit on the enterprise and ability of those at the head of affairs.

OF IMPORTANCE TO PACIFIC COAST MERCHANTS.

With this route completed and opened to traffic, merchants in Western Canada will, in the writer's opinion, be in a position to bid favourably for the trade of Central Mexico, against those who have previously monopolized it with shipments via the frontier and the gulf ports.

It is true that for some time there has existed all-rail communication between Salina Cruz, on the Pacific, and this city, but as shipments by this route must come over three different lines, the freight rates are high, at present being equal to the sum of the three locals. Besides, the time consumed in the journey is about twice what will be required by the new route.

I am led to believe, from conversation with those in authority, that the freight rate from Manzanillo to Mexico will practically compete with that from the gulf ports to Mexico, and this, coupled with a low rate from British Columbia by the new Canada-Mexico Pacific service, warrants one in making the assertion that in the near future the British Columbia merchant will be most favourably situated in respect to this market, for not only will he be able to put his goods into Mexico City but into the towns to the north and west of the capital, of which there is a goodly number, the following being the more important: Zapotlan (30,000), Sayula (15,000), Guadalajara (110,000), Irapaato (25,000), Guanajuato (60,000), Leon (80,000), Aguascalientes (40,000), Celaya (25,000), Queretaro (40,000), Zacatecas (60,000), San Luis Potosi (70,000), Pachuen (40,000).

PORTS OF CALL.

There are four ports on the coast where, according to the contract, the boats of the line must call on both the outward and homeward voyage. Beginning with the most northerly they are: Mazatlan, Manzanillo, Acapulco, and Salina Cruz, the present terminus of the line as well as the Pacific terminus of the Tehauntepec National Railroad. Besides these the boats may, on proper notice to the department of communications, make calls at any of the other ports, either to discharge or take on cargo. The more important of these, also beginning with the most northerly, are: Guaymas, Carmen Island, La Paz (Lower California), Altata, San Blas and San Benito.

GENERAL REMARKS ON PORTS OF CALL.

Mazatlan is the largest of all the Mexican west coast ports, its population being in the neighbourhood of 30,000. As well as being the largest port it is also the largest town on the western slope of the Sierra Madra. It has long been an important commercial centre and the principal port of entry for imports for consumption and distribution in that territory. There are a number of old and wealthy houses carrying large stocks of goods which I shall give by name later in this same report. The west coast extension of the Southern Pacific Railway, at present under construction, and known in Mexico as the Cananea, Rio Yaqui and Pacific Railway, will pass through Mazatlan, and when completed will connect it with the whole coast to the north as far as Guaymas, with central Mexico at Guadalajara. At present there is a large force consisting of several thousand men employed on the construction of this line which from Mazatlan will follow a southerly and easterly course to Guadalajara, passing en route, through the towns of Acaponeta, Santiago, Ixcuintla and Tepic. It is expected to complete the road in three years when mail, that now takes seven days from Mexico City, will be landed in Mazatlan in about forty-eight hours.

MANZANILLO.

Manzanillo, as I have said above, will be the Pacific terminus of the Mexican Central's west coast extension. The town itself is small and hot, but the harbour is

spacious, and when the port works, at present under construction, are completed, will afford ample and safe accommodation for a large number of ships. At present all general cargo must be handled by lighters. The Mexican Central has a deep water pier, but up to the present time only construction material has been handled thereat. At present the cost for loading and unloading is high, but once the railway is completed, this undesirable feature of the situation will be remedied.

Manzanillo is situated in the state of Colima, and for some twenty years has been connected with the city of Colima, the state capital, by a narrow gauge line of railway. Colima is a beautifully clean city of about 25,000 inhabitants, and the commercial centre of a fertile district, rich in tropical products, amongst which may be cited sugar, rice, coffee, pineapples, bananas, cocoanuts and cocoa beans, the oil of which is extensively used in the manufacture of soap.

None of these products are at present exported, to any extent, beyond the confines of the other coast towns in Mexico, though they could undoubtedly be had for shipment to Canada in limited quantities and later in much larger quantities, were the demand created.

Cocoanut trees take about eight years to bear, but at the end of that time, with only a local market, leave a profit of \$1.50 gold per tree and continue to bear for from fifty to one hundred and fifty years.

SUGAR.

The sugar manufactured in the district is refined and I doubt if it could be profitably exported to British Columbia. The bulk of it is manufactured in cubes and is not so white as American cube sugar, but is sweeter and absolutely free from adulteration or mixture with chemicals for the purpose of whitening. This, indeed, may be said of all Mexican sugars which fulfil the requirements of the recent pure food laws.

COFFEE.

The production of coffee is not as yet very extensive, amounting to about 4,000 quintals or 200 tons. Colima coffee is of a superior grade and in demand locally at a good price, and for this reason exporters have not exerted themselves to accredit it outside of Mexico. However, the production of coffee, not only in this district, but throughout Mexico generally, is increasing faster than the local demand and for this reason, we may expect, in the future, to find the surplus of this district seeking a foreign market.

PINEAPPLES AND BANANAS.

The successful shipment of pineapples and bananas from Manzanillo to British Columbia would, undoubtedly, depend on the rapidity with which they could be landed at destination, once they were loaded. This, though, would not be the case with cocoanuts, and I believe a good business could be developed. The price of cocoanuts in Colima and Manzanillo is from two to three cents each, Canadian money. They are rather larger than the ones I have generally seen offered for sale in Canada.

Besides the articles above enumerated, there is quite an exportation of hides and skins, principally deer skins, from Colima and Manzanillo.

PINE AND OAK FORESTS.

There are extensive areas of pine and oak forests in this district and it is expected that much capital will soon find its way in this direction with a view to their development. As lumber is high in all parts of Mexico it is only necessary to have adequate means of transportation for the lumber industry to leave a good margin of profit on capital invested.

COPPER MINING.

In this state and the southern and western parts of Jalisco there is at present under way a considerable development in copper mining and with the port of Manzanillo so conveniently situated, it would be quite feasible to ship either the ores or the copper matte to the British Columbia smelters. As the ores, for the most part, carry a high percentage of copper, they would easily stand the cost of transportation. The output in the immediate future is not likely to be very great, but with the amount of development work now being done, it is certain to be greatly increased in the very near future. Mexico is fast becoming a very important factor in copper production. Further on in this report will be found a list of persons engaged in the development of copper properties in this district.

PALM HATS.

Cheap palm hats are manufactured quite extensively in and about Colima. There are no regular factories as they are made by the Indians by hand. It strikes me that they might find a good sale during harvest time in the great wheat areas of the Northwest.

ACAPULCO.

Acapulco has the finest harbour of any port south of San Francisco and north of Valparaiso on the Pacific coast of America. There are very fertile lands all about and the climate is well adapted to the production of all kinds of tropical fruits. Construction is being commenced on a railroad to run inland from Acapulco to Chilpancingo, the capital of the state of Guerrero. Both of these towns suffered quite severely in last spring's earthquake though at Acapulco there was no loss of life. A large quantity of ties and construction lumber will undoubtedly be required for the building of the railroad and I am glad to be able to report that important shipments have already been made from British Columbia for use therein. The SS. *Tottenham* cleared from Victoria in the month of March with the largest cargo of lumber to ever leave a Pacific coast port, nearly four million feet, to be used in the work.

Acapulco is but a small town and the population in the surrounding district inland and along the coast is very sparse, and for this reason it is not to be expected that it will be a big purchaser of Canadian products. Nevertheless there is a certain consumption that can very well be supplied from the British Columbia market.

COALING STATION.

Acapulco's greatest importance is as a coaling station. Coal is received from both Wales and Newcastle, Australia. Welsh coal sells at \$16 gold per ton, while the Australian product can be bought for \$10 gold. The *Boston* and *Chicago* of the American navy, which recently returned from Central American waters, coaled in Acapulco a few days previous to my arrival there, and paid the higher price for the Welsh article. British Columbia coal is known on the coast and while not considered as good as the Welsh, is considered better than the Australian, and were it available in sufficient quantity, would undoubtedly meet with a large sale as it could even undersell the cheaper grade now available.

SALINA CRUZ.

Salina Cruz owes its existence and importance to the fact of its being the Pacific terminus of the new international highway, the Tehautepec National Railway. By the expenditure of a vast sum of money it has been converted from an open stretch of beach into a safe harbour, where ships of the largest tonnage can tie up at the piers and be quickly unloaded and reloaded by immense electric cranes. Sugar from

the Hawaiian Islands for the refineries in the eastern states and general merchandise from the east destined for San Francisco and Seattle and other western ports are at present being shipped by this route, the monthly tonnage being already in the neighbourhood of 4,000 tons. Shipments between Europe and eastern Canada destined for Pacific ports, and *vice versa*, could well utilize this same route, which is certainly destined to be an important factor in the world's commerce between east and west. Freight rates are much cheaper than by an all-rail haul across the continent, and much valuable time may be saved over the trip by the straits of Magellan or around the Horn.

From here the traveller may reach Mexico City by rail in about forty hours. There is sleeping car service all the way through with but one change, which is made at Corboda, on the line of the Mexican Railway.

Salina Cruz is a growing and important port, and a constant market may here be found for several of British Columbia's products, for besides the local consumption it is the distributing point for much of the merchandise destined for the towns to the east and south. It will also be a natural outlet for much of the hennequen fibre, whose cultivation is at present being extensively developed in the state of Chiapas.

GUAYMAS.

Guaymas, while not one of the ports at which the boats of the service are obliged to call, will likely be included in the regular itinerary, as there will, in all probability, be a regular demand there for coal and other products, and it is from here that boats get their clearance when loading salt at Carmen Island, where there are no customs officials. It is important as being the next largest port on the coast to Mazatlan, having a population of about 15,000. It is the present southern terminus of the Sonora Railroad, which connects it with the Southern Pacific Railroad at Nogales, on the Arizona boundary line, passing en route through Hermosillo, the capital of the state of Sonora, and several other towns of more or less importance. The state of Sonora is very rich in mineral wealth, the famous Cananea copper mines being situated in the northern part.

SAN BLAS.

San Blas, about half way between Mazatlan and Manzanillo, is another port of some importance, not that it is of any considerable size, but because it is the port of entry and outlet for the city of Tepic, the capital of the territory of the same name and also the centre of a good coffee and fruit district. There are at present several fruit-growing companies operating in the neighbourhood and growing bananas for export.

COAL AND LUMBER.

There is a market for coal and lumber in greater or less quantities at all of the ports above mentioned. Acapulco, I have already stated, is an international coaling station. The other ports need it for railroad engines, steamboats, power and lighting plants and factories generally. The company operating the line of coast steamers keeps a regular supply both at Mazatlan and Guaymas. Rough lumber and flooring can also be sold, in limited quantities, all along the coast, and it is quite likely that larger quantities will soon be required at Mazatlan, where it is intended to shortly begin the construction of modern port works. Railway ties will also be in demand in connection with the construction of the different lines of railway of which I have already made mention.

APPLES AND POTATOES.

While not being required in large quantities, there will be a steady demand throughout the winter months for both apples and potatoes. The quality should be of the best, as the freight on this class is the same as on inferior grades, thus making the difference in cost laid down so little that the consumer is always willing to pay the slightly higher price for the best article obtainable. Apples should be packed in boxes and wrapped, and potatoes in either barrels or crates. I would also recommend, as much as possible, uniformity in size in selecting these articles.

CANNED FISH.

While there will always be a limited demand for this, it is not likely that the consumption will ever reach the proportions that the British Columbia dealers would certainly desire in view of the importance of the canning industry in that province. This is due to the fact that fresh fish is to be had all along the coast throughout the year. When the railroad lines, which will connect this coast with the interior, are completed, the trade may be increased, as it is more difficult to transport the fresh fish to the interior towns, and the consumption of canned fish will naturally be greater. The kinds in greatest demand are sardines and a cheap grade of salmon, the colour demanded in the latter case being a deep pink. It is necessary to offer a quality of fish that can be retailed in the stores at 38c. Mexican (19 cents Canadian) per can. There might also be a small demand for the higher grades of salmon, but the bulk of the trade will always be in the cheap article.

CEMENT.

There is always a demand for Portland cement in all parts of Mexico where there is any building. More especially is this the case at the ports and the demand along this coast, for railroad and port works construction is likely to be heavy for some years to come. According to grade the present retail price at Salina Cruz varies from \$7 to \$11 per barrel, Mexican money.

SISAL (HENNEQUEN).

For some eight years experiments have been conducted in the cultivation of this fibre in the state of Chiapas and the result has been to prove that it can be successfully produced here. The fibre is somewhat shorter than that grown in Yucatan but is stronger and due to the climate and soil the plant matures much more rapidly. In Yucatan it requires several years to mature, while in Chiapas but three to four are necessary. The Yucatan plant continues producing from 12 to 15 years, while the Chiapas only for from 8 to 12 years.

At present there are about three and a half million bearing plants in the district but within two years more there will be fully five millions. The fibre is at present being exported to the markets of the eastern United States, but would be quite as available, if not more so, so far as transportation is concerned, for shipment to western Canada. There is also, a considerable quantity being produced in the vicinity of Mazatalan, the available output this year being six hundred tons. I am giving this information about this important article of commerce as it might be to the advantage of some of those interested in the manufacture of cordage and binder twine to investigate the advisability of establishing a factory in British Columbia.

COFFEE, CACAO AND COQUITO.

While there is at present very little coffee on the coast offering for export the production, not only there but in other parts of the republic, is increasing from year to year, and it is only to be expected that in the near future it must seek an outside

market. The districts about Colima and Tepic are both well adapted to its cultivation, and produce a very high grade of coffee, commanding a considerably higher price than ordinary grades, and it is much in demand for domestic consumption. It is estimated that the coming crop in the Tepic district will amount to about nine or ten thousand quintals.

Cacao, for the manufacture of chocolate, is also cultivated on a small scale, but could easily be produced in larger quantity did the demand warrant.

Coquito or cocoa beans, the oil from which is used in the manufacture of soap, is quite extensively cultivated in the Manzanillo and San Blas districts. This product should, I believe, find a ready sale in British Columbia.

RICE.

There is a considerable production of rice at different points on and near the coast, though its exportation is at present confined to other ports and interior points of the country. In this connection I have been informed that the oriental population of western Canada insists on rice from China and Japan.

SUGAR AND HIGH WINES.

There are extensive sugar plantations in the states of Colima and Sinaloa and in the territory of Tepic. Practically all of the product is manufactured into refined granulated and cube sugar, the tank bottoms being manufactured into high wines. These high wines might be put to various industrial uses in Canada.

TROPICAL FRUITS.

While the present production of tropical fruits is not sufficient to admit of a large export trade, it might be well to state that there is much land, that can be purchased at a low price, suitable for growing oranges, bananas, pineapples, lemons and cocoanuts, and conveniently situated to the ports of call. I am informed that one large company has already been organized intending to engage extensively in fruit culture, and to put on a line of fruit boats to ply between Mexican ports and those of the Western States and Canada.

HIDES AND SKINS.

There are large areas of good grazing land in the southerly part of this region, and a considerable exportation of hides. Also goat and deer skins are to be had. The American buyers are keenly awake to this fact, and have their agents all along the coast buying them up.

GENERAL REMARKS.

There are undoubtedly other lines in which a profitable commerce may be developed, either now or in the future. In this connection I would repeat the suggestion I have made on previous occasions, viz., that those interested in any of the lines above mentioned should pay a visit to the country, each one carefully studying conditions as they affect their particular line of business. Attempting to establish connections by means of correspondence is entirely inadequate. It is desirable that buyers and sellers should know each other personally, and not only is it desirable but much valuable time may be saved in getting matters started. The boats of the Canada-Mexico Pacific service sail from Victoria on the last day of each month, and make the round trip in about six weeks. With the five ports at which they call and the time spent in each port, the passenger thereon can form some idea of existing trade conditions, though a much more thorough study could be made and more accomplished were the return trip made a month later on the next boat. The company, I believe, is will-

ing to make special rates to business men going down to study trade conditions. The agent for the line in Vancouver and Victoria is Mr. J. H. Greer, who will give more definite information on all points.

PRINCIPAL COMMERCIAL HOUSES.

The following is a list of the principal commercial houses doing business between Guaymas and Salina Cruz:—

GUAYMAS, SIN., MEX.

- *W. Iberri é Hijos, agents Canada-Mexico line and general steamboat brokers.
- *Luis A. Martinez, agents of the boats of the Compañia Naviera del Pacifico (coast line).

A. W. DONLY.

CITY TRADE BRANCH.

REPORT BY CANADIAN REPRESENTATIVE.

(Mr. Harrison Watson.)

73 BASINGHALL STREET,

LONDON, E.C., ENG., November 29, 1907.

APPLES.

Large shipments of Canadian apples have arrived in London during the present month, and it is interesting to note that shipments include a small proportion put up in cases which appears to come from Ontario. Although the large dealers do not seem to favour Canadian apples packed in cases, such fruit as has come under my notice has a much superior appearance to the ordinary run of apples which are imported in barrels.

PACKING METHODS.

In the first place the apples are probably selected with particular care, and owing to superior packing methods there is an absence of the bruises which are so detrimental to value. The general trade hold that there is only a very limited demand for apples in cases owing to the increased cost, but in a large market like this there is a class of the public which wants the best of everything, and as other sources of supply

seem to find good customers for a high class apple, Canadian shippers can be encouraged, in my opinion, to cater to this demand to a certain extent and in certain varieties of apples.

It is true that cheapness is of paramount importance in this country, and that any increase in cost above prices which have become almost standard in the retail and barrow trade would affect trade adversely, and for this reason the large demand for apples shipped in barrels is certain to remain. Merchants in this market are, however, very conservative in their views, and as they have become accustomed to Canadian apples always being shipped in barrels, there is probably some involuntary opposition to the novelty of the adoption of the case, which will wear off in time.

CALIFORNIAN AND TASMANIAN APPLES.

The Californian and Tasmanian apples, which are forwarded in cases, have undoubtedly secured permanent favour, owing to the excellent appearance and condition in which they are offered at the leading fruit shops, and it is obvious that apples packed in barrels cannot possibly be delivered over here in the same state of perfection. In fact the more or less bruised state in which practically all Canadian apples are sold in this country forms a constant source of complaint and regret from people who have tried them, and is certainly prejudicial to their use for table purposes.

CARELESS PACKING.

Calling the other day upon one of the largest importers of Canadian apples, mainly from Nova Scotia, a complaint was made that great carelessness in grading was noticeable in the fruit now to hand, and upon my asking the head of the firm to put the matter into writing, I have received a letter from which the following is an extract:—

‘There have been thousands of barrels of “dropped” apples, that is to say apples that have been blown down by the gale and bruised, shipped as No. 1 and No. 2, as the case may be.’

WOOD FLOUR.

It is constantly pointed out that Canada has special natural advantages for the production of so-called ‘wood flour’ or ‘meal,’ which is used in large quantities by manufacturers of linoleum and also of explosives in this country. The matter has frequently been the subject of report to Canada, but until recently nothing has resulted. Latterly, however, Canadian manufacturers having expressed their readiness to thoroughly examine the question, some samples and current prices were obtained and forwarded, together with other information, to those interested. Although the inauguration of the industry would necessitate some expense in the direction of plant, there are apparently no particular difficulties in the establishment of the industry, provided that the enterprise holds out reasonable prospects of profit.

One Canadian manufacturer, however, who has carefully investigated the subject, now reports that the prices offering at the present time in this market for wood flour are altogether too low to be attractive, and barely equal the actual cost of material at the factory in Canada. As several thousand tons of the various grades of wood flour are annually imported into this country, the industry should be advantageous to a country possessing the timber-bearing resources of the Dominion, but under the circumstances stated above it is hardly to be expected that the industry will be established for the time being.

It would, however, probably be essential that the district in which the factory were operated must be advantageously located, both as to the supply of the raw material—which is understood to be largely waste—and as to the ability to secure low rates of transportation, both of which advantages are probably possessed by the manu-

facturers who are at present supplying the requirements of this country from abroad. The Canadian manufacturer who proposed to take up the matter reports that present prices offering would have to advance at least £1 a ton to make the business profitable as far as he is situated.

I am making some further inquiries with a view to ascertaining if business might be practicable in some of the finer grades which would command higher prices, but speaking generally, unless Canadian manufacturers can reduce the cost of production it would appear that prospects of the establishment of the trade upon a profitable basis are unfavourable.

AUTOMOBILES.

In view of the increased use of motor cars in Canada, I paid a visit to the motor show held in London during the month. The British motor industry has again made striking progress, and many of the leading manufacturers can produce as fine a quality of vehicle as that manufactured by their continental competitors.

The increase in the number of manufacturers is, however, resulting in over-production, and already there has been a considerable drop in prices with every sign of a still heavier reduction in the near future. As a consequence, manufacturers will strain every effort to enlarge their sources of outlet, and several of them are already paying attention to the possibility of increasing trade in Canada, where up to the present it is understood the majority of the automobiles in use are of American manufacture.

PITWOOD.

From time to time inquiries are made as to the possibility of Welsh firms obtaining supplies of pitwood from Canada. This matter was again raised during the month by Messrs. L. Gueret, Limited, of Cardiff and Nowport. They point out that nearly one million tons of this commodity are imported annually into Bristol channel ports from France, Portugal and Spain, and also the Baltic, and they asked us to place them in touch with any Canadian shippers who would like to take up the matter.

Although the nature of pitwood is fairly well known in Canada, we reproduce the requirements of Messrs. Gueret, which are as follows:—

‘The material is supplied with the bark on, and in the following lengths, viz., 6½ feet, 9 feet and 13 feet; the diameter at the small ends being 4 inches to 7 inches, 5 inches to 9 inches, and 8 inches to 12 inches respectively, and the proportions of each are 30, 60 and 10 per cent. The wood usually employed is larch or fir, and must be straight. The timber is sold by the ton, and is weighed by the dock company at each of the receiving ports.’

The company mentions from 20s. to 25s. per ton net, ex ship, as a fair range of prices, and about 21s. 6d. as the current quotations. Previous inquiry into the subject has been met with the statement that the prices offering are as a rule quite unprofitable to Canadian shippers, particularly in the cases where the material would be subject to inland freight of any kind. On the other hand, there is no doubt that many firms would welcome additional supplies of pitwood from Canada.

HARRISON WATSON.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND,

YOKOHAMA, November 27, 1907.

SALTED SALMON.

The dry-salted salmon or dog-salmon trade between Canada and Japan is seriously threatened by the competition of the Russian product. By virtue of the recent Russo-Japanese treaty, it is alleged salted fish from the Siberian coast is admitted free of duty, while that from Canada is subject to the tariff rate of \$1 per 133 pounds. It is conceded that the Russian article is very far inferior; but the duty, and higher freight rate consequent upon the greater distance from Canada, with higher cost of production, will give the market to the Siberian fishermen. The much higher quality of the Canadian fish will keep it on hand to some extent for those who prefer the good article notwithstanding the price. But since Japan furnishes the only market for that kind of fish, it may be doubted whether it will afford sufficient support to enable that branch of the Canadian fishery interest to continue. The pioneer of the Japan-Canada fishery trade, the originator of the salted salmon as a marketed food, Mr. Tamura, is said to have relinquished that particular line; which may be taken to mean that he sees no inducement in it for the future.

JAPAN BLACK TEA.

The talk about turning to the production of black tea in Japan is likely to have results. The call for the black tea of commerce from Turkey and other places in eastern Europe and western Asia is attracting attention, according to reports. Current tea rumours are to the effect that the growing demand in these places promises to obtain a good many customers for the Formosan black tea, which industry is now in the way of active development. Of course, Formosan tea has many defects which can be remedied. It has too strong an odour, is rather loosely rolled, and is often mixed with dust and stems. These shortcomings are owing to the inexpert way of manufacture, and can be removed by careful attention on the part of operators. However, Formosan leaves having a superiority quite their own, will win popularity over the Indian product if made after the Indian fashion, and attention paid to the taste of customers.

EXPORT RETURNS.

The official return of the national trade for the ten months ending with October are not received at the time of writing; but here, as elsewhere, sometimes good news is too good to keep. The press have the information that the export trade of Japan during the ten months ending October this year shows an increase of over \$14,000,000 in value as compared with the corresponding period of last year. This showing is said to be due to a rise in the price of the principal export staples this year, since the quantity showed a marked decrease from last year.

There were quantity decreases in raw silk, habutai, cotton yarn, tea, and silk handkerchiefs. The increases were in waste silk, copper, camphor and coal. It may be added that raw silk showed an increase of \$8,723,500 in value; tea, \$2,252,500; copper, \$3,743,000; coal, \$1,071,000; waste silk, \$846,000, and camphor, \$795,000.

DEPRESSION IN THE SILK MARKET.

The financial disturbance in America and Europe is thought will seriously affect the raw silk market at Yokohama. Japanese sources aver that the export of silk has been almost entirely suspended, and that consequently about 35,000 bales of silk, valued at something like \$17,500,000, have accumulated in Yokohama. This large absorbing of bank funds has contributed to advance to eight per cent the bank rate of discount, and greatly accentuated the general stringency.

Should the stock of raw silk in Yokohama be much increased, the tension of the money market will be intensified, and the bank rate may advance still further. There seems to be little prospect of the money market being relieved so long as the raw silk market continues in its present depressed state.

GRAND EXHIBITION OF JAPAN, 1912.

The chief director of this auspicious undertaking, Viscount Kaneko, availed himself of a recent opportunity to explain at length the nature and scope of the exhibition. In part, he said:—

‘Those who have watched the history of our previous five domestic exhibitions, as well as of our participation in foreign international exhibitions, will have noticed that in each case the initiative was taken by the Imperial government; which organized and carried out entirely under rules and regulations. The proposed Grand Exhibition in 1912 is no exception to this precedent. It is entirely a government affair, and comes under the control of the Minister of Agriculture and Commerce. The organization and regulation of this Grand Exhibition are therefore necessarily different from those of similar exhibitions in Europe and America, with which the world is familiar.

‘From the name of the proposed exhibition—which is officially styled the “Grand Exhibition of Japan, 1912”—it may be inferred that it is a domestic exhibition, but in its spirit and nature it is thoroughly identical with an international exhibition, because the prime and direct object of the Imperial government is to emphasize its universal character and to make it as great an international exhibition as possible.

‘With such aims and objects, the Imperial government have cordially invited the government of the nations to assist and participate by sending exhibits relating to education, science, machinery, electricity and manufactures. Although our government provides buildings for those five specified exhibits of foreign countries, yet any nation can erect a special building of its own, and can exhibit products irrespective of those mentioned.

‘Whether we are fully prepared or not to assume the gigantic responsibility of holding such an exhibition, and of inviting to it all the nations, remains to be seen; but our earnest hope is to solicit all the nations to come together and assist us in this grand exposition of the arts of peace, and realize the debt which one owes to the other, in the matter of promoting science and education, industry and commerce, of which the twentieth century is so justly and so proudly characteristic.

‘I am now happy to announce that prompt replies are coming from the governments of various countries.’

THE MATCH INDUSTRY.

Several years ago Japanese matches scarcely found a market beyond Bombay, except a small export to America; now they are exported in great quantity to Egypt, France, England and other western countries. As a result of indiscriminate timber cutting, the material for match wood is becoming short. The whole stock of poplar trees, of which the match splinters are made, will, it is said, scarcely supply ten years more. The poplar is being further depleted by the supply of the raw material for ‘chip braid.’ This condition is thought to cloud the future of the industry. Beech is said to be the next best available material, of which there is abundance.

TEA EXPORT.

According to the official returns the total export of Japanese tea during eight months from January to August this year amounts to 32,843,391 pounds, valued at \$5,306,613, which is said to show an increase of $17\frac{1}{2}$ per cent over the total of the previous year.

JAPAN SUGAR.

The Island of Formosa is a wonderfully fertile country. Referring to the sugar industry there, the *Osaka Asahi* (*Times*) observes that owing to serious drought at the time of the replanting of sugar cane this year, the area under plantation has materially decreased, showing a decrease of nearly thirty per cent on the figures for the preceding season, and a still heavier reduction when compared with the season before that. But the area of plantation of the improved variety has continued to increase year after year. This variety withstands drought, and yields more sugar. The new sugar will appear on the market in a week or so, and the total output this season is estimated at the value of \$60,000,000, almost equal to that of the preceding season.

NEW LINER,—AND LIVE STOCK.

The Kobe *Chronicle* reports the safe arrival at Nagasaki of the *Niigata-maru*, a new steamer built in England for the Nippon Yusen Kaisha (Japan Steamship Company). The vessel was fully loaded with ship-building materials for Nagasaki and Kure shipyards, and also carried a quantity of arms for the latter port. She also had on board thirty-seven Belgian stud horses, purchased in Europe by the Department of Agriculture and Commerce. This is one lot of several coming from Austria-Hungary, England and Australia. The purchasing agents had Canada also on their itinerary.

THE RUSSIAN RAILWAY ROUTE.

From the diary of a resident who has just made a trip from Yokohama to London via Siberia, one gathers that the Siberian route has nothing to offer in the way of scenic beauties or luxuries like the Canadian Pacific Railway can boast; but any one pressed for time, and travelling light, is afforded a very quick passage to Europe. Provided only hand baggage is taken, and that one is fairly easy-going, there is little to seriously complain of along the whole route. Of course there are tiresome delays now and again, great carelessness is displayed in the ventilation of the cars, which are sometimes below freezing point, and again so over-heated as to be unbearable; the visits of customs inspectors are fairly frequent, while the food is served up to suit Russian palates rather than those of western Europeans. Extraordinary delays and robberies of baggage, too, are frequent. The interminable birch forests, at parts of the journey, are succeeded by long stretches of the most monotonous, uninviting landscape in others; the only bits of fine scenery being encountered near Lake Baikal.

A. MACLEAN.

MANCHESTER.

REPORT OF COMMERCIAL AGENT.

(Mr. P. B. MacNamara.)

MANCHESTER, December 3, 1907.

STOCK OF PROVISIONS AT LIVERPOOL.

Estimate of the stock of provisions, &c., in the port of Liverpool, on November 30, 1907; together with the figures at the corresponding date last year, and also of last month:—

JAPAN, CHINA AND COREA.

REPORT OF THE TRADE COMMISSIONER.

(Mr. W. T. R. Preston.)

TOKYO, JAPAN, November 27, 1907.

INTRODUCTION OF WHEAT AND FLOUR.

The problems surrounding the introduction of Canadian wheat and flour in the far east present several serious phases for the careful consideration of the department. The personal interests of the agricultural population of the west, and the great milling interests, are more immediately concerned in this question. Nevertheless the direct results that are certain to accrue to all commercial interests in Canada, from the opening of the markets of the far east to Canadian products, are so evident, it may safely be said that the entire population of the Dominion cannot avoid regarding the question as of the greatest possible importance. The possession of this eastern market for the cereal products of Canada would mean the establishment of a national reputation for the Dominion in the east, and would unquestionably create and foster inquiries for every character of Canadian produce that might find a market in Japan or China.

DIFFICULTIES TO OVERCOME.

But the difficulties that have to be overcome in the successful introduction of Canadian wheat and flour in the east should not be minimized. They certainly cannot be looked upon as insignificant. It is easy to say that the products of Canadian wheat are the best in the world, and that, in the course of time, these products are certain to find a demand in Japan. That is quite true, but the probabilities are that the present generation will long have passed away before the Canadian cereal trade with Japan will increase to any comparatively significant extent, considering the enormous possibilities, unless very special efforts are exerted to secure a general appreciation of the excellence of the Canadian products by the mass of the population

in the east. The wheat and flour imports of Japan have increased more than eight hundred per cent in ten years, and the trade is only in its infancy.

It should be remembered that it is only within a recent period that the wheat and flour from western civilization were introduced into this part of Asia. Previous to that time the staple articles of food were supplied altogether by the products of eastern soils. The time has been too short during which the taste of the great consuming millions of Asia could be educated by the ordinary channels of commerce, to appreciate the differences between the various qualities of the wheat products of the western world. To the vast majority of the population 'flour is flour.' The overwhelming bulk of the people do not understand the difference between a product of wheat containing twenty per cent more gluten than the inferior quality. For their purposes the products of all wheats make 'batter,' 'paste' and 'dough.' In their judgment the products of wheat stand in the same relationship to the parent product as the pulverized product from various sizes of chestnuts, all of which render the same grade of flour. That is the extent of the general understanding of the wheat flour question among the masses throughout eastern Asia.

LOW GRADE FLOUR.

This situation has consequently furnished the opportunity for flooding the east with a quality of flour for cooking purposes, regarding which there is, probably, no market in any other part of the world. And the enterprise with which these low grade products have been pushed into all the great distributing centres of trade, commerce and population, and the prices at which they are sold, forms the basis for a serious problem in connection with any efforts that may be made to successfully introduce, on a fairly large scale, the better qualities of the products of wheat.

The fact that western Canadian wheat is intrinsically better than the ordinary products of Australia, Washington and Oregon, enhances the value of the Canadian product. So that, to begin with, the Canadian cereal commands a greater value at the point of production. That it should also be quoted at a higher figure than the inferior grade thousands of miles from the scene of its growth need occasion no surprise. Merchants and traders here, as elsewhere, naturally follow the line of least resistance. It is, therefore, more convenient to those engaged in the flour and grain trade to actively push the lower grades of wheat products, than to waste time attempting to handle the more expensive and better qualities. Under those circumstances it is only too obvious that the Canadian products are placed at a singularly serious disadvantage. No other result could be expected from the present situation. The ordinary commission merchant supplies the demand, he does not expend his energy trying to create it. There is only one exception to this general policy on the part of merchants and traders in the east, and that is in respect to Mr. S. Tamura, of Kobe and Tokio, the pioneer of Canadian trade with Japan. Mr. Tamura strenuously advocates the use of Canadian wheat and flour on all occasions.

DISADVANTAGES OF CANADIAN WHEAT FLOUR.

From this brief statement it will be seen the serious disadvantages that Canadian wheat products are under in Japan are two-fold, (1) the absence of an appreciable knowledge by the mass of the population of the relative qualities of flour; and (2) the comparatively high prices of the Canadian products by comparison with the figures that are quoted for the lower grades of flour that are marketed here. So long as the former exists, the latter assumes the aspect of an insuperable barrier for any such increase in the Canadian trade as the value of the Canadian flour justifies, or as the consuming capacity of the vast population here might fairly indicate as probable. If the former could be replaced by a personal acquaintance with the relative merits and values of the products of the various wheats that are offered for sale in the eastern markets, the difficulties surrounding the latter would be overcome in the natural course of events. But until the one is removed the other must remain. The serious

import of the present situation must be self-evident. But the problems are capable of solution. And the solution of the one means, in the very near future afterwards, the equally successful solution of the other. With an appreciable knowledge by the general population of the relative qualities of Canadian flour and other wheats, the successful introduction of the Canadian products on a large scale will most assuredly follow.

On the other hand, it may be said that Canada has certain advantages in respect to the eastern market that are not possessed by any other country. Not the least of these is the more favourable geographical relationship of the Dominion to Japan, with its nearly fifty millions of population, than any other part of the western continent.

DISTANCES TO JAPAN.

The following tables of distances, although well known, may not be uninteresting:—

Vancouver to Japan, route	4,280 miles.
Seattle to Japan, route	4,800 "
San Francisco to Japan, route	5,520 "
Winnipeg to Vancouver	1,420 "
Calgary to Vancouver	643 "
Edmonton to Vancouver	842 "
Toronto to Vancouver	2,770 "
Chicago to San Francisco	2,270 "
New York to San Francisco	3,270 "
Winnipeg to Japan	5,700 "
Calgary to Japan	4,720 "
Edmonton to Japan	4,920 "
Toronto to Japan	7,050 "
Chicago to Japan	7,790 "
New York to Japan	8,790 "

But notwithstanding the difference in mileage being altogether in favour of Canada by enormous distances, to say nothing about the time occupied in transportation between the various points and Japan, the cost of transportation by the shortest route does not present the same relative favourable comparison.

A mutually protective arrangement between the railway and steamship companies will likely prevent the Dominion from securing any appreciable benefit from the natural geographical advantages that Canada possesses in respect to the markets of the far east. So that any solution of the problems that have to be solved must be looked for elsewhere. This aspect of the case therefore narrows the range of possibilities to a very limited area, i.e., the education of the millions of population in the eastern world to an intelligent appreciation of the unquestionable excellence of the Canadian wheat products.

UNITED STATES CAPITAL EMPLOYED.

Capital from the western parts of the United States has brought about the erection of large mills, installed with the latest Roller machinery, on the Pacific Coast, and in conjunction with Japan capital, the milling operations have been extended to the east. These mills have been erected for the sole purpose of supplying Japan and China with the flour products of the wheat that is grown in Washington and Oregon. To western consumers the quality of this commodity is well known, and the reasons why it can be placed on the market here at a lower figure than other competitors in the east can quote, are also obvious. These ventures are only successful because the general public here, as may be inferred from what has already been noted on the subject, do not even faintly understand the merits and values of the different charac-

ters of the flour that the world offers for sale. And, least of all, do they appreciate the difference between the flour produced from Washington and Oregon wheat, in comparison with the value of product of the prairies in Western Canada.

PRICES OF WHEAT FLOUR.

At the date of writing this report the prices quoted for different classes of wheat flour in the markets of Japan are as follows:—

Japanese mills, for fifty pounds of flour, Nippon Sefun Kwaisha.

Metu, best....	Yen 2 80
Take, second..	" 2 70
Ume, third....	" 2 40

From these prices there is a reduction of five sen per bag and an additional two or three sen to large buyers.

Taikoku Sefun Kwaisha.

Fugi, best....	Yen 2 80
Shikishima, second..	" 2 70
Yamato, third....	" 2 55

The same reductions are given as in the previous quotations.

Kobe Milling Company—

Best, 1st....	Yen 2 74
MMM, 2nd....	" 2 69
Gold, 3rd....	" 2 66

A reduction is made of four sen off each bag.

United States flour, per barrel of 196 pounds—

The export grade..	Yen 4 25
Duty and other charges..	" 1 40

Total cost..	" 5 65
--------------	--------

The price is equal to yen 11.30 for 196 pounds, or yen 2.82 for 40 pounds.

This grade of flour competes with the best Japanese product.

Australian flour, per bag of fifty pounds—

The export grade, c.i.f..	Yen 2 27
Duty and other charges..	" 0 70

Total..	" 2 97
---------	--------

The price is yen 2.97 for 49 pounds. The product is considered to be equal to the Japanese best grade, and is regarded as better than the flour that is imported from the United States.

It should also be noted that this flour has only to bear a transportation rate of from four to five dollars per long ton of 2,400 lbs., as against eight or ten dollars per ordinary ton of 2,000 lbs. for the transportation that has to be paid by the flour from Canada and the United States ports. The journey from Australia to Yokohama occupies from four to five weeks.

Canadian flour, per barrel of 196 pounds—

From Manitoba, first..	\$5 65
" second..	4 75
" third..	3 80

These figures include 80 cents or 90 cents freight charges per barrel.

Add duty, exchange and other charges, \$1.40, total for first, \$7.05; total for second, \$6.15; total for third, \$5.20.

First, the net cost is yen 3.32 for 49 pounds. It is not considered equal in colour to the best Japanese flour, but it is better in nutrition and strength.

Second, the net cost is yen 3.07 for 49 pounds. This is regarded as too dark for bread when used alone, and it is sold principally for the purpose of mixing with other flour.

Third, the net cost is yen 2.60 per 49 pounds. This product is only available for manufacturing vermicelli.

West of Manitoba flour, per barrel of 196 pounds—

Best for export, including 80 cents freight charges.	\$5 35
Add duty, exchange and other charges.	1 40

Total. \$5 75

This is equivalent to yen 3.40 for 49 pounds, and is, therefore, much more expensive than the best product otherwise offered for sale in Japan.

A careful study of the figures that are given in these schedules will probably give the reading public of the Dominion an intelligent idea of the situation here in respect to the introduction of the Canadian products of wheat.

PULP-LOGS RISING IN PRICE.

A considerable rise has taken place in the price of pulp logs lately. The forest owner, however, had expected still higher prices. As it is, the increase will make a difference in the cost of a ton of moist mechanical about 80 cents, and about \$2.40 per ton of dry cellulose.

PAPER PRICES RISING.

Paper prices have to some extent responded to the advance in the cost of the raw materials, and the Norwegian and Swedish 'News' makers are endeavouring to keep together as much as possible in order to carry out a rise in their products.

DANISH CO-OPERATIVE ASSOCIATIONS FOR EGGS AND FRUITS.

The principal reason why the export of agricultural and other farm and garden products from Denmark has reached the present dimensions lays in the forming of co-operative export associations, whereby quality and packing, &c., become uniform and reliable. Besides the dairy and creamery associations which I have previously mentioned, there also exists such co-operative associations for egg and fruit producers.

The Danish farmers co-operative egg export association founded in 1895, now counts about 40,000 members and has its own paper. The object of the association is to work up the best possible market in foreign countries for Danish eggs, by guaranteeing the buyers that the eggs sold under the mark of the association are strictly fresh and clean. It has packeries in the principal cities. Every week the association sends out a list of prices, which then is in force from Thursday morning to the next Wednesday evening. The sales of the association amount to about 1½ million dollars per year.

The Danish Fruit Producers Association, founded in 1888, has now about 7,000 members, and like the egg exporters, also have their own paper. The association's work consists in arranging expositions and discourses and also by sending out travelling teachers throughout the country. Further it assists the members in obtaining the most suitable young trees and plants, as well as in the most profitable sale of their products. The sales of the association now amount to about 1½ million pounds of fruit per year.

C. E. SONTUM.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, December 17, 1907.

TRADES AND LABOUR COUNCIL.

A local trade journal announces the formation in this city of a Trades and Labour Council, and says: 'The object in view is the creation of a board of arbitration representative of the various handicrafts to whom all differences with employers must be submitted before decisive action is taken. In a small way it is an Industrial Hague Tribunal to whom appeal must be made before introducing strikes in the event of disagreement as to labour rates. Up to date nearly all the trades in the city have asked for representation on the board, and it is expected that the salesmen will go in after the end of the year. The institution is not intended as a socialistic battering ram to exact all sorts of outrageous terms; on the contrary it is mainly intended to facilitate understanding between employers and employees in all departments of industry. With such an object in view it cannot fail to be productive of good, and should be welcomed by all interested.'

NEWFOUNDLAND FORESTRY ASSOCIATION.

A forestry association has recently been formed here with His Excellency the Governor as patron, and Sir Robert Bond, the Premier of the Colony, as president, together with a number of prominent persons more or less connected with the lumber industry as directors. The objects of this association are stated to be:—

- (1) To advocate and encourage judicious methods in dealing with our forests and woodlands.
- (2) To awaken public interest to the very serious results attending the destruction of our forests by fires and other illicit processes, and to devise and suggest methods for their preservation.
- (3) To consider and recommend the exploration, as far as practicable, of our public domain with the view of determining the areas suitable for agricultural settlement and those that may be permanently reserved for the growth of timber.
- (4) To encourage afforestation wherever advisable and to promote forest tree planting.
- (5) To collect and disseminate, for the benefit of the public, reports and information bearing on the forestry problem in general and especially with respect to the conservation of our own forests and to teach the rising generation the value of the forest with the view of enlisting their efforts in its preservation.

E. D. ARNAUD.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(*Mr. J. S. Larke.*)

THE ROYAL EXCHANGE, SYDNEY, November 4, 1907.

IMPROVED AGRICULTURAL CONDITIONS.

In my report for October (see Monthly Report, September, 1907, page 1030) I dwelt upon the probabilities of a short supply of wheat and flour and some other products through drought. In the latter portion of last week, good rains have fallen which have materially relieved the situation and may avoid any demand, more than the ordinary one, for supplies from Canada. It is a little too soon to know what is the actual condition, but the harvest in Victoria will be helped and a small portion of those in this State. The probabilities are, however, that there will be enough grains for home consumption providing that the Southern States should get some good rain-falls later.

J. S. LARKE.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.*(Mr. D. H. Ross.)*STOCK EXCHANGE BUILDING,
MELBOURNE, November 25, 1907.

AUSTRALIAN-ENGLISH MAIL SERVICE VIA SUEZ.

The Orient Steam Navigation Company has been successful in securing from the Commonwealth Government an annual subsidy of £170,000 for a fortnightly mail service between Australia and England via Suez, alternating with the Peninsular and Oriental Company subsidized by the Imperial Government. The term of contract is for a period of 10 years from February 1, 1910. The new subsidy exceeds by £50,000 that now paid to the Orient Company, but, for the increased payments, provision has been made for new steamers, acceleration of speed, special freight rates and a continuation of the Australian ports of call to Brisbane.

For two years the Queensland state government has paid about £26,000 per annum for the steamers to proceed to Brisbane from Sydney, but after 1910 the state will be relieved from further expenditure by the Federal Government in terms of the new contract. Seven new steamers, in addition to some of the fleet now engaged, of not less than 11,000 tons gross tonnage, and capable of steaming at least 17 knots per hour will ultimately be placed in the service. In the articles of agreement between the Commonwealth and the contractors adequate cold storage capacity is stipulated for, besides which the freight on butter is fixed not to exceed $\frac{1}{2}$ d. (1 cent) per lb. and the freight on fruit at 60 shillings=(\$14.60) per ton of 40 cubic feet from any Australian port to London.

REVISION OF AUSTRALIAN CUSTOMS TARIFF, 1907.

The Commonwealth House of Representatives has up to this date revised 229 items (some items will likely be recommitted) of the new Customs tariff which came into operation on August 9th last. There are yet 215 items—with important subdivisions to be passed—but the amendments so far made, generally in the way of slight reductions from the rates originally introduced, went into immediate effect. The duties upon agricultural implements and machinery remain practically unaltered from those quoted in my report of September 2nd (Weekly Report No.). With the exception of a few lines of comparatively unimportant implements there is no preference given to the manufactures of the United Kingdom. The duty upon canned fish has been reduced to 1d. (2 cents) per lb. with no preferential treatment. Leading items of apparel and attire have been reduced by about 5 per cent in both the general and United Kingdom preferential rates. Denims and Dungaree are now 5 per cent in the general and free in the United Kingdom preferential tariff, while the rates on cotton piece goods remain unaltered.

Many items of particular interest to Canadian exporters have not yet been debated. A copy of the revised tariff—to item No. 229—is going forward by this mail to the Superintendent of Trade Commissioner Service, Ottawa, from whom inquirers can obtain the latest available information. The Commonwealth Senate has adjourned until January 22nd and the House of Representatives will likely be prorogued early in December, resuming the debate upon the tariff—if not then completed—early in 1908.

THE COMMONWEALTH EXCISE DUTY ON HARVESTERS.

Last year the Australian customs duty upon complete harvesters was fixed at £12 (\$58.40) per machine and at the same time, the Excise Act provided that an excise duty of £6 (\$29.20) should be imposed upon every harvester manufactured in Australia under conditions as to remuneration of labour which had not been pronounced by the President of the Commonwealth Court of Conciliation and Arbitration to be fair and reasonable. Until quite recently no action was taken by manufacturers to obtain the necessary exemption certificates from the court. During the last two months the principal manufacturers made application for exemption from excise duty upon the ground that the wages paid by them were fair and reasonable. The trend of this legislation was referred to in my report of October 28 (see Monthly Report, October, 1907, page 1186), in which the 'New Protection' proposals of the Australian Government were reviewed. The principle involved is that, while manufacturers are adequately protected by customs duties, fair and reasonable wages must be paid to the employees.

Profound interest has been taken in the notable judgment of the court, delivered at Melbourne on November 8, whereby the principal manufacturer of agricultural implements in Australia was refused exemption from excise duty for the reason that he had not paid fair and reasonable wages. Subsequently, the Customs authorities made a demand for the collection of the excise duty from the time the fixed duty was placed upon harvesters. It is understood that there are some legal difficulties in the way and that no action will be taken for the collection of the excise duty on harvesters until January next.

STANDARD WAGES—AUSTRALIAN AGRICULTURAL IMPLEMENT TRADE.

The president of the Commonwealth Court of Conciliation and Arbitration, in delivering judgment upon the application for exemption from excise duty received from agricultural implement manufactures, said, in regard to fair and reasonable wages, 'I cannot think of any other standard appropriate than the normal need of the average employee in a civilized community.'

After elaborating the reasons for his judgment, I quote from same as follows:—

The following schedule conditions as to remuneration are declared to be fair and reasonable, for the purposes of the excise tariff 1906, for persons employed on time work in the manufactures referred to in the Act, if (except in the case of watchmen) their hours of work do not exceed eight hours per day. The excise standard remains until altered:—

	Rate per day. s. d.
Labourers, unskilled, including furnacemen's labourers and lorry drivers	7 0
Labourer, skilled (including pullers out)	7 6
Strikers, dressers, drillers	7 6
Iron benders, malleable iron annealers and belt cutters	8 0
Furnacemen, sheet ironworkers, machinists (other than fitters and turners and including grinders)	9 0
Fitters, turners, moulders, case makers and blacksmiths	10 0

Wood workers and Painters.

Machinists (excepting those working shaping machine, carver, borer or mortising machines or crosscut saws)	9 6
Men working shaping machine or Boutt's carver	10 8
Men working boring or mortising machines or crosscut saw	8 0
Carpenters (including timber markers)	10 0
Wheelwrights	10 0
Pattern makers	11 0
Painters—brush hands	9 0

	Rate per day.
	s. d.
Painters—writers and liners..	10 0
Timber yardsmen	8 0
Watchmen..	8 0
Engine drivers (first class engine)..	9 2
Engine drivers (with other work)..	10 0

Apprentices.

	Rate per week.
First year..	8 0
Second year..	12 0
Third year	16 0
Fourth year..	20 0
Fifth year	24 0
Sixth year..	30 0
Seventh year..	36 0

Boys (not apprenticed).

	Per day.
Under 15 years..	2 0
15 to 16..	2 6
16 to 17..	3 0
17 to 18..	3 6
18 to 19..	4 0
19 to 20..	5 0
20 to 21..	6 0

Young Journeymen.

Class A.—Rate: Not less than two-thirds of the minimum prescribed for journeymen.

Class B.—Rate: Not less for the first year than five-eighths, and for the second three-fourths of the minimum prescribed for journeymen.

An Exception.

Any old, slow or infirm worker licensed to work at a lower rate under section 99 of the Factories and Shops Act, 1905 (No. 2) of Victoria (or any substitution therefor) if the license be approved by the registrar of the Commonwealth Court of Conciliation and Arbitration.

Overtime.

At the rate of time and a quarter for two hours, time and a half for the next two hours and double time afterwards. Double time on Sundays and Christmas Day, New Year's Day, Good Friday and Eight Hours Day. Overtime to be reckoned separately for each day from the usual time for ceasing work, and without regard to any time off on other days.

Definitions.

'Journeyman' means any person doing any of the work of an artisan as an employee, not being an apprentice or a young journeyman. 'Apprentice' means any person under 21 years bound by indenture for a term of years (not less than five or more than seven) to learn the trade of an artisan. 'Young Journeyman' means, class (a) any person who has served his time as apprentice, and who has not had more than one year's subsequent experience; class (b) for a period of two years only from November (1907) any person under 25 and not being an apprentice who on that date was doing any of the work of an artisan in the manufacture of any of the articles referred to in the schedule to the Excise tariff, 1906.

STANDARD WAGES—AMENDED FOR IMPLEMENT MAKERS.

At a subsequent date the president of the Australian Arbitration Court amended the following items of wages for workers engaged in the manufacture of agricultural implements, the rates being at per day:—

Machinists (iron), other than fitters and turners, and including grinders.	9s.
Moulders (including core makers)	10s.
Machinists (wood), excepting those working shaping machines or Boutt's carver, or boring or mortising machine, or crosscut saw.	9s. 6d.
Men working shaping machine, or Boutt's carver; men working boring or mortising machine or crosscut saw.	8s.
Wheelwrights.	10s.
Unskilled labourers, drivers, &c.	7s. 6d.

MEDICAL INSPECTION OF TASMANIAN SCHOOLS.

Tasmania is the first state of the Commonwealth to institute the systematic medical examination of schools, and this has been attended to with unqualified success. A lady—Dr. Gertrude Halley—has for some time past occupied the position of medical inspector of schools, and the important subject of 'school hygiene' is, on account of her published reports, now receiving the careful consideration of educational authorities throughout the other states. It appears that the duties of a medical inspector of schools are somewhat varied.

The fact that good school work cannot be done by children with either defective eyesight or hearing, under bad hygienic conditions, is well recognized, and in the past a great deal of money has been wasted in trying to teach pupils who could not see or hear properly. Badly lighted schoolrooms develop bad sight, and epidemics of infectious diseases may break out, entailing loss of time, money and life to the community. The early recognition of disease, and the stamping out or prevention of its spread, comes under the direct supervision of the medical inspector.

RECEPTION OF NEW PUPILS IN TASMANIAN SCHOOLS.

In the city and town schools of Tasmania every new pupil has his or her name, weight and age taken, the vision and hearing tested, and the history of any previous infectious disease, and any personal peculiarities, such as club-foot, cleft palate, curvature of the spine, marked presence of adenoids, or other troubles, are entered on a class card by the teacher. Then the medical inspector on the next visit examines any children whose names have been entered, and should they require medical treatment the head teacher is instructed to forward to the parents a notice informing them of the fact, and urging them to consult their own doctor.

In no case do the medical inspectors treat the children. They only advise that treatment be obtained, and in case of defective hearing or sight, instruct the teacher to place the child in the best position for seeing and hearing. It is a fact that in practically none of the cases so reported were the parents previously aware of any defect.

VENTILATION, LIGHTING, &C., OF TASMANIAN SCHOOLS.

Any defects in the cleanliness of a Tasmanian schoolroom are brought under the notice of the head teacher, and suggestions are given as to the improvement in school buildings, though, of course, it is impossible to have all the older schoolrooms equipped with the latest improvements. So the teachers are assisted to remedy such defects. For example, should a room be lighted from the wrong direction, turning the desks

will often improve matters. The subject of the ventilation and perfuming of the room is explained, and in the country districts the teacher is instructed in special exercises and the hygienic treatment of individual children. In an outbreak of infectious disease prompt measures are at once taken.

METHOD OF CLEANING TASMANIAN SCHOOLS.

School cleaning is put on a systematic and direct basis in Tasmania, that being regarded as a most important matter both from a hygienic as well as educational standpoint. The method is as follows:—Sawdust, damped with a solution of cyllin (one of the best carbolic preparations) or phenyle, is scattered over the floors before sweeping, and afterwards the sawdust and accumulated dirt are burnt. This is done after school hours every day, and then desks, presses and other furniture are wiped over with dusters wrung out in a solution of either of the above-mentioned disinfectants.

In addition, in each vacation all the floors, desks, and paintwork are thoroughly scrubbed, and the walls above the paint are cleaned. It is already found that the training of the children themselves in matters of hygiene is important, for they are quick to learn and appreciate the value of fresh air and cleanliness in schools and there is no doubt the sense so developed will be exercised in their homes.

AUSTRALIAN DRIED FRUIT—1908 SEASON.

Arrangements are now being made for exporting large quantities of the new season's crop of Australian raisins and sultanas to Canada. Prices will be available in February next and shipment can be made from March onward. Over 10,000 cases were sold to Canadian importers last year, and if the season proves favourable to the growers a much larger business is anticipated in 1908. The address of the principal shippers in Melbourne can be obtained, by wholesale fruit, importers in Canada, upon application to the Superintendent of Trade Commissioner Service, Department of Trade and Commerce, Ottawa.

EXHIBIT OF CANADIAN WOMEN'S WORK IN AUSTRALIA.

The Canadian Pavilion erected—in the huge Melbourne Exhibition Building—to contain the goods sent from the Dominion for the Australian Exhibition of Women's Work, is one of the most attractive features in this successful undertaking of Her Excellency Lady Northcote, wife of the Governor General of Australia. All the goods from overseas are placed in the large balconies of the building—the ground floor being reserved for Australia—and the Canadian Pavilion occupies a most prominent position, being directly opposite the gallery containing the Royal exhibits.

The following extract from a report which appeared in a Melbourne newspaper may be of interest:—

There is no spot in the Exhibition that more effectively combines picturesqueness with an appearance of businesslike capacity than the Canadian Pavilion. From the galleries opposite, or from the ground floor, the graceful white lines of its structure, and the charmingly-arranged curtains of vivid orange and dark myrtle green present an irresistible attractiveness. Once inside its portals, it is the orderliness, the excellence of the arrangements that is most striking. It might be a well-managed little shop, so admirably are its wares displayed. It is eminently characteristic of the businesslike methods of the Canadian people, and its whole scope is suggestive of the trend of Canadian patriotism. The court owes its existence to Her Excellency the Countess Grey, but none the less it embodies the spirit which makes for the success and strength of Canada. For these hangings of handsome and serviceable worsted, these homespun dress stuffs and useful rugs are the outcome and expression of a truly patriotic movement. They have been sent by the patroness of the Canadian Handicrafts Guild, a

society whose object is to encourage and develop handicrafts and home art industries throughout the Dominion.'

PROSPECTS OF AUSTRALIAN WHEAT CROP, 1907.

Shortly after the departure of the last Vancouver mail on October 28 the greater portion of the wheat-growing districts in Australia experienced two heavy rainfalls, thus greatly improving crop prospects. A moderate crop is looked for in Victoria, though any estimate is still subject to weather contingencies before harvest, while the prospects for the Commonwealth is still for a surplus of about 10 million bushels over domestic consumption, for shipment mainly from South Australia. The mail closes with an unsettled market, wheat being quoted nominally at 4s. 8d. (\$1.13) per bushel f.o.b. principal Australian ports. Prices are now entirely dependent upon London quotations in view of the probable surplus.

AUSTRALIAN TRADE CONDITIONS.

Many orders for oversea goods are being held in abeyance or are being forwarded subject to confirmation by cable pending the results of the complete revision of the Australian customs tariff. In other respects the business outlook is upon the whole a favourable one, though with a smaller production of wheat and butter—and a decline in the wool market—it is not anticipated that the current season will cause such an influx of money into the country districts as during the last two years.

CANADIAN TRADE NOTES.

Large orders are going forward by this mail for Canadian news paper, which is now well established on the Australian market. The quality of the paper, competitive prices and excellent representation are responsible for this satisfactory condition of affairs. Canadian wall papers are in excellent demand, and business is being done for some manufacturers in the Dominion who were hitherto not represented in this part of the world. The sales of Canadian implements for this year is reported as of good volume, but the margin of profit has been curtailed owing to the high customs duty imposed on these lines. Fair indents for general lines are being taken, but until the tariff is definitely fixed upon furniture, chairs and bicycles no new or repeat business is in prospect.

D. H. ROSS.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(*Mr. J. S. Larke.*)

THE ROYAL EXCHANGE, SYDNEY, November 26, 1907.

HARVEST BELOW AVERAGE.

Four weeks ago the probabilities were that drought would ruin the crops of Australia. Within a week, fortunately, rainfall, general, though not heavy, came and saved the situation. While the harvest will be below the average throughout Australia yet there will be enough for home consumption and something to spare. There will be, therefore, no requirements upon Canada to meet a special need.

NEW ZEALAND TRADE.

Though the government's statistics are made up for the year ending on December 31, yet the trade year ends in September. The figures for the year closing last September show a remarkable advance over those for the similar year ending September 30, 1906. Excluding specie, it is found that the exports went up by nearly £2,200,000, and imports by nearly £2,500,000, or a total increase in trade amounting to little less than four and three-quarter million pounds in value. Thus:—

	1905-6	1906-7
Exports.	£17,709,378	£19,892,377
Imports.	13,375,121	16,071,887
Total.	£31,284,449	£35,964,264

The principal increase in exports is due to wool, amounting to £800,000. The increase in the quantity exported accounts for two-thirds and a higher value about one-third of this advance. In nearly all lines of export the quantity has very considerably increased. Naturally, New Zealand, in spite of some dry weather in the earlier part of this calendar year, is in an exceptionally sound condition. The probabilities are that there will be a lowering value of many of its chief products, in harmony with the reduction in prices throughout the world, but there should be a sound import trade for the next twelve months to come.

HEMP.

The millers of New Zealand flax have become anxious to do business and accepted considerably lower prices. Quotations have been: £23 10s. for 'Good fair,' £22 10s. for 'Fair,' and £20 for 'Common.' In view of the heavy royalties which the millers have to pay, it is probable that some of them will be compelled to close down and the output reduced unless better arrangements can be made.

Some hemp plants from Manila have been introduced into British New Guinea. There is every reason to believe that the climate and soil are adapted to producing hemp of the highest quality, but the development of Papua has been very slow, and it is likely to be some years before there would be any quantity to export. If the development is speedier it would be of very great advantage to Canadian cordage makers to have a source of supply open to them upon as good terms as those accorded to any country.

LEGISLATION AGAINST COMBINES.

Complaints have frequently been made that prices in New Zealand have been advanced upon flour and potatoes beyond the receipt of a reasonable profit upon the transaction. The Government of New Zealand has introduced into the parliament a Bill called the Flour and Other Products Monopoly Prevention Bill. It provides that it shall be lawful for the governor at any time, on the recommendation of the Court of Arbitration, to declare by order in council that on and after a date to be specified flour imported into New Zealand shall be admitted free of duty. Any such order in council may be revoked by the governor at any time as from a day to be specified, not being earlier than three months from the gazettement of the revocation. The Court of Arbitration may from time to time, at the direction of the governor, make an inquiry as to whether the wholesale market price of flour in New Zealand is unreasonably high, and if the court finds that such price is or has at any time since the receipt of such direction from the governor been unreasonably high, it shall recommend the governor to exercise the powers conferred by this Act. These provisions shall also apply to wheat and potatoes in the same manner as to flour.

It is laid down for the purpose of inquiries, the price of flour shall be deemed to be unreasonably high: (a) If the average price of flour in New Zealand is relatively to the price of wheat in New Zealand higher than the average price of flour in Australia, unless, in the opinion of the Court of Arbitration, the additional price in New Zealand is justified by additional cost of production; or (b) if the average price of wheat in New Zealand has, by reason of any combination among the holders of stocks of wheat, or by reason of any complete or partial monopoly established by any such holder, been raised above the price which would be determined by unrestricted competition. The price of wheat shall be deemed to be unreasonably high if the average wholesale price in New Zealand has, by reason of any combination among the holders of stocks or by reason of any complete or partial monopoly established by any such holder, been raised above the price which would be determined by unrestricted competition. The price of potatoes shall be deemed to be unreasonably high: (a) If the average wholesale price in New Zealand exceeds £7 per ton, or (b) if the average wholesale price in New Zealand has, by reason of any combination among the holders of stocks, or by reason of any complete or partial monopoly established by any such holder, be raised above the price which would be determined by unrestricted competition.

AUSTRALIAN TRADE.

The returns of trade for the first eight months of the year show an increase of imports of £4,000,000 and an increase of exports of £3,000,000 as compared with the similar period of the previous year. The return of the state of New South Wales for the first ten months is proportionately better, showing an increase of over £3,000,000 in imports and nearly a similar amount in exports for the ten months. Trade, however, is not likely to continue at this expanding rate. The drought has materially affected the export of dairy produce. The production of gold has declined from the inability of surface workers to procure water. The reduced price of metals is likely to close a number of mines that cannot be made to pay at present prices; the higher grades of wool as well as the lower at the Sydney sales have fallen from 10 per cent to 15 per cent and may be further reduced, following the trend of prices throughout the world. The finances of Australia are, however, in a healthy condition, and there is no probability of a very material reduction of trade unless the weather should be more unpropitious than it now appears to be.

QUEENSLAND BUTTER.

As an exception to the decline in dairy products, the exportation of butter from Queensland has increased in quantity and remarkably so in quality. In England some recent shipments brought 122s. and 124s. per cwt. These are striking prices to be obtained from butter produced in a semi-tropical climate. During the months of July and August its shipments were nearly double in quantity of those of Victoria and New South Wales combined, hitherto considered as the home of dairy production. It illustrates the varied character of the resources of a state that is but very partially developed.

PATENT MEDICINES.

The Minister for Customs of the Commonwealth has changed somewhat his Bill dealing with proprietary medicines. The principal clause of the new Bill is as follows:—

16. 1. In respect of any goods being medicines or medicinal preparations for internal or external use, or articles intended for food for infants or invalids, if the Governor General is satisfied (a) That any trade description or part of a trade description required by the regulations under section 7 or 11 of this Act would involve the disclosure of trade secrets of manufacture or preparation; and (b) that such disclosure

is not necessary for the protection of health or welfare of the public, he may by order allow the trade description with respect to those goods to be modified in such manner as he directs. 2. With respect to goods other than those mentioned in the preceding subsection, the regulations under section 7 and 11 of this Act shall not prescribe a trade description which discloses trade secrets of manufacture or preparation, unless in the opinion of the Governor-General the disclosure is necessary for the protection of the health or welfare of the public. 3. In respect of any goods being medicines or medicinal preparations, the regulations may prescribe a trade description stating the ailments and diseases which they are intended to alleviate or cure.

THE COAL STRIKE.

For two weeks there was a serious strike in the Newcastle district which produces the coal largely consumed in Australia, and probably all the coal that is exported. Through the intervention of the Premier, work was resumed yesterday morning in all but one of the mines, where a new dispute arose. This, too, has been settled and work this morning is anticipated in all the mines. There were no stocks of coal on hand, and if the strike had continued it would have had very serious effects upon the leading interests of Australia within two weeks.

THE TARIFF.

The following is a list of those items of the tariff which have been reduced by the House of Representatives. The preference duty is that which is charged on goods imported from the United Kingdom, and the general tariff is that charged on goods from all other countries:—

TRADE COMMISSIONER SERVICE

	Old Tariff.	Tariff as Introduced.	As Passed by House.
Biscuits, per lb., general.....	1d.	1½d.	1½d.
" " preference.....			1d.
Molasses, per cwt.....	Free.	1s.	Free.

Miners' safety lamp, general.....	Free.	10 "	Free.
" " preference.....		Free.	
Sheet and piping lead.....	Free.	50 / ton.	Free.

Last week the attention of Parliament was devoted to other matters, but yesterday the Government introduced some amendments to the tariff as originally proposed, changing the iron and machinery duties, increasing some and lowering the duty upon others. They have not all as yet been passed by Parliament but during the day, corrugated iron galvanized, on which the original duty was 15c. per ton and the general tariff, as introduced 20 per cent, the preferential tariff 15 per cent, was reduced to 30s. per ton and 20s. per ton preferential tariff. Galvanized iron, not corrugated, the general duty was fixed at 20s. per ton and the preferential tariff 10s. per ton.

Mangles, clothes wringers, and washing machines, preferential tariff 12½ per cent, tariff as introduced 20 per cent; the general duty was made 20 per cent, preferential duty 12½ per cent.

Agricultural, horticultural and viticultural machinery and implements, n.e.i., including caneloaders on wheels, channel-making graders, feed grinders, garden and field spraying machines, garden and field rollers, garden hose reels, garden syringes, horse road rollers and machines, lawnmowers, sweepers and sprinklers, road-making ploughs, road scoops and scrapers, scoops, stump extractors, general tariff 20 per cent *ad valorem*; previous tariff 12 per cent. Duty reduced to 15 per cent, general tariff, 12½ per cent preferential. Other items of the section of machinery were passed as originally proposed by the tariff.

J. S. LARKE.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. MacNamara.*)

CANADA CHAMBERS, 36 SPRING GARDENS,
MANCHESTER, ENG., December 14, 1907.

CIDER.

The apple harvest in Devonshire has proved to be the poorest in many years, and as the production of cider from that county, which has heretofore been one of the chief sources of supply, has failed, the trade is compelled to look elsewhere for its requirements. From inquiries made throughout the 100 apple-growing parishes it is found that the crop will not be more than half as large as usual and as a result but little cider will be made.

A firm in London dealing largely in this article has deemed it necessary to send a representative to Canada, and the addresses of Canadian cider manufacturers was furnished from this office. There is therefore every prospect that the price of cider in England will be advanced although last year's output was a particularly good one and that a substantial supply of it is still on hand, yet the consumption of it is increasing rapidly. It is therefore necessary that the Canadian cider makers adapt themselves to producing an article second to none, and they will be recompensed by finding a ready sale for it at good prices in this country.

TURNED WOODWARE.

From information furnished me by one of the largest houses in Manchester, the demand for turned wood of great variety is increasing, not only here but throughout England, and that Canada does not contribute very largely in these articles affords some surprise. It is difficult to enumerate all the different kinds of turned goods required in cabinet making, as there are numerous designs of all kinds of small spindles required; the other articles that bulk largely are table legs, chair legs, sofa and dresser feet, chair stretchers and spindles, also curtain poles in various lengths and diameters, broom handles, tool handles of every description, towel rollers, towel rails, and rolling pins.

Dowels are well worth consideration, and are mostly made from birch in diameters from ¼ inch up to 1 inch with 1-16 multiples, and should be made in 36 inch lengths, but shorter and longer lengths are marketable but only in moderate quantities, as by far the greatest demand is for 36 inch rods. Maple and oak dowels are purchased, but the trade prefers good birch. Pill boxes are largely handled here, but at present are supplied by Sweden, Norway and Finland, also round boxes for needles and pins. I have assurance that the firm I refer to will gladly afford every assistance in their power to Canadian manufacturers desirous of exporting the above goods by furnishing drawings and designs, and their address can be obtained from this office.

APPLES AT LIVERPOOL.

Messrs. Woodall & Co. report under date December 14, 1907, as follows:—

• Arrivals this week...	61,240 barrels, 10,583 boxes,	64,768 barrels.
“ last week...		90,060 “
“ to date...		640,395 “
“ against same period last year...		605,307 “

Although arrivals this week are on a more moderate scale, they have been more than sufficient for requirements. The market should be feeling the effects of the Christmas demand, but the trade has been dull and dropping, and the bulk has not brought last year's prices, the only exception to this being some superior and well selected Canadian, for which there was an active demand.

BRITISH TRADE RETURNS.

The Board of Trade returns for November recently issued show the imports amounted to £57,145,099, while the total exports were £35,862,176. The imports show an increase of £1,398,020, as compared with the corresponding month of last year, and an increase of £4,009,203 as compared with November, 1905. The exports likewise show a large increase, the excess over November, 1906, being £2,887,014, and over the same month of the previous year, £6,254,027.

P. B. MacNAMARA.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, December 28, 1907.

LOCAL MANUFACTURERS.

The particulars contained in the following item published in a recent issue of a local trade journal, if correctly stated, as I have no doubt they are, should be interesting and instructive reading to many Canadian manufacturers, especially those engaged in the cordage business. Making due allowance for the exceptional character of the transaction mentioned, there seems to be no reason to suppose that it may not be followed by others, or that in course of time the various factories now operated here will not be able to obtain a footing upon the Canadian market if some have not already done so, but in any case the more reciprocal the trade between the two colonies can be made in the future the better it is likely to be for both sides.

'Most of our local manufacturing concerns never contemplate getting their products beyond the home area, and if they succeed in displacing a foreign article in the Newfoundland market they are happy. Occasionally, however, a local product not only holds its own at home, but, in addition, it is called for by some outside country. The Colonial Cordage Company has a case in point, for they have just completed a very large cable for the Dominion Coal Company of Canada. The cable is eleven inches in circumference, is two hundred and twenty fathoms long, and weighs over four tons. It will be shipped by the *Cacouna*, and the probabilities are that this order will be but the forerunner of many others. The cable has been made with special care, and it is a fair index of the capabilities of the St. John's Ropewalk.

'There are a good many rope manufacturing concerns in Canada, and the Eastern States have also many to which this order could be sent, and it is safe to infer that every one of these was negotiated with before the order was sent down here. Under the circumstances, then, Mr. Munroe should be pleased with the order, as a tribute to the capabilities of his factory. An incident of this kind ought to produce some thinking on the part of manufacturers in other lines here, with a view to ascertaining if they can't push their wares outside their own country. To date, somehow, we seem to tacitly accept the notion that we can never get beyond our own country with our own manufactures; but there is no reason why this should be always so. In our crude and untried period of manufacturing our diffidence was natural enough, but we have become experts now, and should rise to a proper appreciation of the fact.'

E. D. ARNAUD.

NEW TARIFFS.

During the month under review there have been distributed from this department to all the principal Custom-houses and Boards of Trade throughout the Dominion, copies of all foreign and colonial tariffs and supplements thereto, as furnished during that period by the International Customs Tariff Bureau, which are always available for reference by those interested therein, resident at the principal centres of trade. The following British and Colonial are supplemental to those published in the departmental Annual Report, 1893, and the quarterly and monthly reports since published, and comprise all additions thereto or changes therein, so far as the department has authentic advice.

NEW ZEALAND.

1907, No. 15.

AN ACT TO IMPOSE DUTIES OF CUSTOMS AND EXCISE AND TO AMEND THE LAW
RELATING THERETO.

September 25, 1907.

Be it enacted by the General Assembly of New Zealand in parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Tariff Act, 1907.
2. In this Act the term 'Tariff' means the schedules to this Act setting forth duties of Customs and exemptions from duties of Customs.

PART I.

Duties of Customs and Excise.

3. All duties of Customs, and all exemptions from such duties, as specified in the schedules to the Customs and Excise Duties Act, 1888, the Customs and Excise Duties Act, 1895, the Customs Duties Amendment Act, 1900, and the Preferential and Reciprocal Trade Act, 1903, and also all duties imposed by the Governor under section seventeen of the Customs and Excise Duties Act, 1888, are hereby repealed, and there shall be levied, collected, and paid to the use of His Majesty on all goods imported into New Zealand or entered for home consumption after the coming into operation of this Act the several duties of Customs mentioned in schedules A and B to this Act.

4. The goods mentioned in schedule B hereto shall, except as otherwise provided for in that schedule or in schedule E,* be exempt from duties of Customs if imported into New Zealand or entered for home consumption after the coming into operation of this Act.

5. There shall be levied, collected, and paid to the use of His Majesty on all goods specified in schedule C, D, and E hereto,* and not being the produce or manufacture of some part of the British Dominions, if imported into New Zealand or entered for home consumption after the respective dates hereinafter specified in this section, in addition to the duties (if any) authorized under schedules A and B hereto, the duties of Customs following, that is to say:—

*The additional duties provided for in Schedules C, D and E have been incorporated in the rates of duty shown under Schedules A and B.

(a) On the articles specified in schedule C,* if so imported or entered after the coming into operation of this Act, an amount equal to the amount payable on these articles under schedule A;

(b) On the articles specified in schedule D, Part I,* if so imported or entered after the coming into operation of this Act, an amount equal to one-half of the amount payable on these articles under schedule A;

(c) On the articles specified in schedule D, Part II,* if so imported or entered after the thirty-first day of March, nineteen hundred and eight, an amount equal to one-half of the amount payable on these articles under schedule A;

(d) On the articles specified in schedule D, Part III,* if so imported or entered after the thirty-first day of March, nineteen hundred and eight, an amount equal to twenty per centum of the amount payable on these articles under schedule A;

(e) On the articles specified in schedule E, Part I,* if so imported or entered after the coming into operation of this Act, duties of Customs equal to twenty per centum of the value for duty as defined by the Customs Laws Consolidation Act, 1882, or its amendments;

(f) On the articles specified in schedule E, Part II,* if so imported or entered after the thirty-first day of March, nineteen hundred and eight, duties of Customs equal to twenty per centum of the value for duty as defined by the Customs Laws Consolidation Act, 1882, or its amendments;

(g) On the articles specified in schedule E, Part III,* if so imported or entered after the thirty-first day of March, nineteen hundred and eight, duties of Customs equal to ten per centum of the value for duty as defined by the Customs Laws Consolidation Act, 1882, or its amendments;

(h) On the articles specified in schedule E, Part IV,* if so imported or entered after the coming into operation of this Act, duties of Customs specified in the said Part of the said schedule.

6. (1) With regard to all articles mentioned in schedule C, D, or E hereto,* the full duty shall be levied, collected, and paid as if they were not the produce or manufacture of any part of the British Dominions, unless there is produced to the collector an invoice of the goods having written or printed thereon a certificate signed by the sender or consignor, in such form as may be prescribed by the Minister of Customs, stating that the articles are *bona fide* the produce or manufacture of some part of the British Dominions named in the certificate. No such invoice shall relate to any goods other than those to which the certificate refers.

(2) On the importation of any articles mentioned in schedule C, D, or E hereto,* the importer or his agent, in addition to the particulars required to be given on the entry of dutiable goods, shall state, to the best of his knowledge, information, and belief, the country of which such articles are the produce or manufacture, and shall satisfy the collector, by declaration or otherwise, of the truth of such statement.

(3) If the collector has reason to believe that any such articles are not the produce or manufacture of the country mentioned in such invoice, certificate, or statement, he may detain them for examination; and if after due inquiry he is satisfied that such invoice, certificate, or statement is false, the articles shall be forfeited and dealt with as directed by the Customs Laws Consolidation Act, 1882, in the case of forfeited goods.

(4) Every importer, or agent of an importer, who produces any such invoice or certificate, or makes any such statement, knowing the same to be false in any particular is liable to a penalty not exceeding one hundred pounds, or, at the option of the Minister of Customs, to a penalty of treble the value of the goods specified in such invoice.

(5) In any proceedings under this Act the onus of proof that any goods are the produce or manufacture of some part of the British Dominions shall be on the importer.

*The additional duties provided for in Schedules C, D and E have been incorporated in the rates of duty shown under Schedules A and B.

(6) In the case of parcels sent by post or through a forwarding agency, the collector may dispense with the certificate required by this section, if evidence satisfactory to him is produced that the goods are the produce or manufacture of the British Dominions.

(7) The Governor may from time to time, by order in council gazetted, make regulations for carrying into effect the provisions of this section, and may impose penalties for the breach of any such regulation not exceeding one hundred pounds, and in particular may prescribe the classes of goods which shall be deemed, for the purposes of this Act, to be the produce or manufacture of the British Dominions or of any specified country.

(8) Sections two to eleven of the Preferential and Reciprocal Trade Act, 1903, are hereby repealed.†

7. Nothing in this Act shall be so construed or shall so operate as to conflict with the schedule of Customs duties and exemptions contained in the order in council made by the Governor on the seventh day of January, nineteen hundred and seven, for the purpose of carrying into effect a certain treaty therein referred to, and made between the government of New Zealand and the governments of certain colonies in South Africa:

Provided that, notwithstanding anything in the said schedule, no higher duty shall be levied on any goods the produce or manufacture of the said colonies than that which would be levied under this Act on the same goods if they were the produce or manufacture of some other part of the British Dominions.

8. (1) The articles in which spirit is a necessary ingredient, permitted to be manufactured in any warehouse or place of security approved and appointed under section twenty-six of the Customs Laws Consolidation Act, 1882 (hereinafter called a manufacturing warehouse), shall be limited to the following articles when made under such conditions, in such quantities, and according to such formulæ as may from time to time be approved by the Minister of Customs, that is to say: Perfumed spirit, spirituous preparations for the toilet, culinary or flavouring essences, and medicinal preparations (excepting medicated wine or wine mixed with food).

(2) Before delivery from any manufacturing warehouse there shall be paid to and for the use of His Majesty a duty on such articles in accordance with the following scale, that is to say:—

On perfumed spirit, 20s. the liquid gal.

On toilet preparations which are subject to 16s. the liquid gallon on importation, 12s. the liquid gal.

On toilet preparation which are subject to 25 per centum duty on importation, 6s. the liquid gal.

On culinary and flavouring essences, 12s. the liquid gal.

On medicinal preparations (excepting medicated wine or wine mixed with food) containing more than 50 per centum of proof spirit, 9d. the pound.

Medicinal preparations (excepting medicated wine or wine mixed with food) containing 50 per centum of proof spirit or less, free.

(3) The Minister of Customs may prohibit the manufacture of any article included under the foregoing headings, if in his judgment such manufacture is detrimental to the revenue derived from the duty on spirits.

(4) If at any time the collector is satisfied that any article made in a manufacturing warehouse has not been prepared strictly in accordance with the formula approved by the Minister of Customs, or that any article the manufacture of which has been prohibited by the said Minister under the authority of this section has been made in a manufacturing warehouse, the said Minister may by writing under his

† The effect of this repealing clause is to only retain the provisions relating to 'Reciprocal Trade' agreements with British Dominions and foreign countries. The preferential provisions of the Act of 1903 are, with certain amendments, incorporated in this Act.

hand revoke the appointment of the warehouse in which such article has been so prepared or made.

(5) For the period of two years after such revocation no person who was in occupation of such warehouse at the time of the revocation shall be competent to make application for the reappointment of that warehouse, or for the appointment of any other warehouse, and if he become the occupier of any manufacturing warehouse the Minister of Customs may revoke the appointment thereof.

(6) Sections nine and eleven of the Customs and Excise Duties Act, 1895, are hereby repealed.†

9. (1) This Act shall be deemed to have come into operation on the seventeenth day of July, nineteen hundred and seven, and to have been in operation since the commencement of that day.

(2) Notwithstanding the last preceding subsection, sections seventeen to thirty of this Act shall be deemed to have come into operation on the passing of this Act, and not at any earlier date.

10. The several schedules to this Act, together with the notes to such schedules, shall be deemed to be part of this Act in the same manner as if they had been contained in the body thereof.

11. (1) Notwithstanding anything hereinbefore contained, every resolution of the House of Representatives passed on or after the sixteenth day of July, nineteen hundred and seven, and before the passing of this Act, purporting to impose any duties of Customs or excise, or to create any exemptions from such duties, shall be deemed to have taken effect and to have had the force of law according to the tenor of such resolution, and to have so continued until the passing of this Act, or until altered or revoked before the passing of this Act by a resolution of the House of Representatives.

(2) Every such resolution as is mentioned in the last preceding subsection shall be deemed to be revoked on the passing of this Act.

12. (1) No additional duty shall be chargeable in respect of goods cleared during the currency of any such resolution as aforesaid by reason merely of the fact that the duties or exemptions imposed or created by such resolution have been altered by any subsequent resolution or by this Act.

(2) When any duty has been paid under the authority of any such resolution in excess of the duty payable under this Act, the collector may allow a refund of such excess, if he is satisfied that the goods on which such duty has been paid are still in the possession of the person who paid the same.

13. Where any contract has been made before the seventeenth day of July, nineteen hundred and seven, between an importer carrying on business in New Zealand and a purchaser in New Zealand for the sale of any goods at a price which includes the duty payable on such goods in accordance with the tariff in force at the date of such contract, the following provisions shall apply:—

(a) If the said goods have been entered before the passing of this Act, and duty has been paid thereon in excess of the duty in force at the date of such contract, the collector, if satisfied that the goods have been delivered to the purchaser in pursuance of such contract, may allow a refund of such excess to the importer.

(b) If the said goods have not been so entered before the passing of this Act, but are entered before the first day of November, nineteen hundred and seven, the collector, if satisfied that they have been imported and are to be delivered by the importer under such a contract as aforesaid, may allow such goods to be admitted at the rate of duty in force in respect thereof on the date on which the said contract was made.

† These repealed sections relate to the manufacture of articles of which spirit is a necessary ingredient, and to the revocation of the appointment of manufacturing warehouses.

14. (1) This Act shall not take effect in the Islands situated within the boundaries set forth in the schedule to the Cook and other Islands Government Act, 1901, until a day to be determined by the Governor by order in council gazetted.

(2) All orders in council made under the authority of the said Act and affecting, the Customs duties or exemptions in the said Islands shall remain in full force and effect, notwithstanding this Act, until revoked or altered by a subsequent order in council.

(3) Nothing in this Act shall affect the provisions of section ten of the said Act, or of section five of the Cook and other Islands Government Act Amendment Act, 1902, or of section three of the Cook and other Islands Government Act Amendment Act, 1903.

(4) On and after the coming into force of this Act in the said Islands there shall, notwithstanding anything to the contrary in this Act, be levied and collected in the said Islands, in addition to all other duties imposed by this Act, the duties of Customs following, that is to say:—

On sugar, whether imported from New Zealand or elsewhere, if entered in the said Islands on or after the first day of November, nineteen hundred and seven, a duty of one half-penny for every pound:

On cotton piece-goods (except calico), linen piece-goods, and piece-goods of mixed cotton and linen, whether imported from New Zealand or elsewhere, if entered in the said Islands after the thirty-first day of December, nineteen hundred and seven, a duty of ten per centum *ad valorem*:

Provided that it shall be lawful for the Governor by order in council at any time to reduce or remit the duties so imposed upon the said goods or upon any class of the same, and so long as such order in council remains in force the said duties shall be reduced or remitted accordingly.

15. All goods delivered upon a deposit or other security for duty before the passing of this Act shall be liable to the duties in force or deemed by virtue of this Act to have been in force at the time of such delivery.

16. (1) Notwithstanding anything hereinbefore contained, printing paper imported by and for the use of the proprietor of any registered newspaper shall be exempt from the duty imposed thereon by schedule E hereto,* if imported and entered for home consumption on or before the last day of December, nineteen hundred and seven, if it is proved to the satisfaction of the collector that such paper was imported under a valid contract entered into before the sixteenth day of November, nineteen hundred and three, for the supply of such paper for a period not exceeding three years.

(2) Notwithstanding anything hereinbefore contained, raw cotton shall be exempt from duty if imported and entered for home consumption on or before the first day of January, nineteen hundred and eight, if it is proved to the satisfaction of the collector that such cotton was imported under a valid contract entered into before the thirteenth day of September, nineteen hundred and seven.

PART II.

Miscellaneous.

17 (1) The Governor may from time to time direct that any article imported into New Zealand, which in the opinion of the Minister of Customs is a substitute for some other article, or which in the opinion of the said Minister possesses such properties that it can be used or is intended to be used for a purpose similar to that for which some other article is used, shall be admitted to entry either at a rate to be fixed by the Governor in proportion to the degree in which it approximates in its properties or uses to such other article, or free of duty if such other article is free of duty.

* The additional rates of duty provided for in Schedule E are incorporated in the rates of duty shown under Schedules A and B.

(2) Section seventeen of the Customs and Excise Duties Act, 1888, is hereby repealed. §

18. Whenever an article is imported in mechanical combination or connection with an article bearing a lower rate of duty, or with an article free of duty, the collector may refuse the admission of such composite article at any rate other than the highest rate chargeable on any of the mechanically combined or connected articles taken separately; but the Minister of Customs may, at his discretion, permit a separate classification of each article, or may admit the whole article under such heading of the Tariff as appears to him just.

19. Notwithstanding anything in this Act or in any other Act relating to the Customs, the collector may admit absolute alcohol, spirits of wine, and spirits, for scientific, medicinal, perfumery, and toilet purposes, and also trade samples and presents from abroad to residents in New Zealand, in packages of any size, and at a duty calculated upon the actual quantity or weight in cases where such duty is leviable by quantity or weight.

20. Whenever an article is imported which bears a proprietary name, or which has a composition which is not clearly disclosed on the label of the package, and it is, in the opinion of the collector, necessary for the purpose of ascertaining the duty payable to have such article analysed, the fee for such analysis shall be such as the Minister of Customs may direct, and shall be paid by the importer.

21. (1) All goods not produced or manufactured in New Zealand shall, on reimportation into New Zealand, whether duty was paid upon them on their first importation or not, be liable to the same duties, rules, regulations, and restrictions as if then imported for the first time.

Provided that goods subject to *ad valorem* rates of duty which are temporarily exported from New Zealand for repairs or otherwise may be admitted to entry on being returned to New Zealand at a duty calculated upon the cost of such repairs, or upon such value as may be lawfully assessed, if satisfactory proof is produced to the collector of the exportation of the goods, and that the goods have not been absent from New Zealand for more than two years from the date of exportation.

(2) All goods the produce or manufacture of New Zealand, brought back into New Zealand, and being of such a kind that if produced or manufactured elsewhere than in New Zealand they would be liable to any duty of Customs on importation, shall be liable to the same duties, rules, regulations, and restrictions as goods of the like kind produced or manufactured in England, unless the same are brought back within five years from the time of the exportation thereof, and it is proved to the satisfaction of the collector that they are the produce or manufacture of New Zealand, in which case the same may be entered by bill of store containing such particulars as the Minister of Customs may direct.

(3) All goods so entered shall be delivered free of duty, except where a duty is payable in New Zealand on the like goods produced or manufactured in New Zealand upon delivery for home consumption, in which case the same duties as are at the time of the return of the goods to New Zealand leviable on such goods shall be paid.

(4) Where a drawback has been obtained on exportation from New Zealand on any goods produced or manufactured in New Zealand, such goods shall, upon return to New Zealand, be liable for an amount of duty equal to the drawback payable on exportation of the like goods at the time of such return.

(5) Section ninety-one of the Customs Laws Consolidation Act, 1882, is hereby repealed.*

22. The Minister of Customs may classify any medicinal preparation or any preparation claimed to be a medicinal preparation under any other heading of the Tariff, if in his judgment such preparation is fit for use or can be easily rendered

§ This repealed section relates to the imposition of duties on substitutes for other articles.

* This repealed section relates to the entry by bill of store of New Zealand goods returned.

fit for use as a beverage, flavouring-essence, toilet preparation, perfumed spirit, or as an article or spirituous ingredient in an article subject to a higher rate of duty than a medicinal preparation.

23. Where any dispute arises as to the true meaning and application of any terms used in the Tariff and therein printed in italics, the Minister of Customs may determine such dispute in such manner as appears to him just, and his decision thereon shall be final.

24. Section twenty-four of the Customs Laws Consolidation Act, 1882, is hereby amended by inserting after the words 'such premises' the words 'upon payment of such fee, and.' §

25. In the event of any bonded or manufacturing warehouse, sugar refinery, or other premises for which an annual fee has been paid being destroyed or closed, the collector may refund a proportion of such fee, calculated from the time at which the premises were so destroyed or closed until the end of the year for which the fee was paid.

26 (1) Where printed matter liable to Customs duty is included in any mail, whether addressed to separate individuals or not, duty shall be paid on such matter (including the envelope or other covering) before its delivery from the post office.

(2) If such printed matter has been posted to the order of any person in New Zealand, or of any person having an agent in New Zealand, the said duty shall be payable by such person or agent, and in any other case the said duty shall be payable by the person who posted the said printed matter, or by his agent (if any) in New Zealand.

(3) The postmaster shall notify the person or agent so liable as aforesaid, if his name and address are known to the postmaster, that such printed matter is detained pending payment of the duty.

(4) If duty is not paid on any such printed matter within six months after the arrival thereof, it may be destroyed or otherwise disposed of as the Minister of Customs directs.

27. (1) Where goods are sent to New Zealand for direct or ultimate delivery to any specified person in New Zealand, such person shall be deemed to be an importer of the goods, notwithstanding that he may not be possessed of or beneficially interested in the goods at the time of importation or while they are in the control of the officers of Customs, and the definition of 'importer' in section two of the Customs Laws Consolidation Act, 1882, is hereby extended accordingly.

(2) Where in respect of any goods there are more importers than one, the collector shall have the same power with regard to all of them as he has with regard to the importer by or on whose behalf entry is offered or passed.

28. (1) Notwithstanding anything in section thirty-nine of the Customs Laws Consolidation Act, 1882, it is hereby declared that where entry is offered or made of any goods liable to *ad valorem* duty in respect of which goods any agreement or arrangement, whether provisional or complete, for delivery thereof, after clearance at the Customs, to any purchaser in New Zealand has theretofore been made, the true and real value of goods the subject of the entry shall be deemed to be the amount paid or to be paid therefor by the New Zealand purchaser, less a fair allowance for freight and insurance and duty (if any), to be assessed by the collector of the port at which such entry is presented, and with an addition of ten per centum of the said amount after deducting the said allowance.

(2) In cases where the amount paid or to be paid by the New Zealand purchaser cannot be immediately ascertained, the true and real value shall be assessed by the collector at such sum as he determines to be the fair market value in New Zealand of the goods, less such fair allowance as aforesaid, and with an addition of ten per centum of the said market value after deducting the said allowance.

§ This section refers to the delivery of sugar for refining.

(3) Assessments made by the collector under this section shall be final and conclusive.

29. Every person making an entry in respect of goods to be delivered by such person shall at the time of entry deliver to the collector a correct list of the persons to whom and the places at which the goods are to be delivered, and shall declare to such list, and such declaration shall form part of the entry.

30. (1) Nothing in the three last preceding sections shall apply to goods delivered in pursuance of a *bona fide* contract of sale made in New Zealand between the purchaser and an importer carrying on business in New Zealand, unless such importer in so selling the goods acts as the agent of some other person.

(2) For the purposes of this section no person shall be deemed to carry on business in New Zealand merely because he has an agent in New Zealand.

(3) If any dispute arises as to whether any person carries on business in New Zealand within the meaning of this section, such dispute shall be referred to the Minister of Customs, whose decision shall be final.

31. This Act shall be deemed to be incorporated with the Customs Laws Consolidation Act, 1882, and the several Acts incorporated therewith; but these Acts shall, in so far as they conflict with this Act, be construed subject to this Act.

32. The following enactments and parts of Acts are hereby repealed, that is to say:—

Sections two to five and schedule A of the Customs and Excise Duties Act, 1888;*

Sections two to four and schedules A and B of the Customs and Excise Duties Act, 1895;* and

Sections two and three and schedules A and B of the Customs Duties Amendment Act, 1900.*

* These Sections and Schedules relate to the imposition of various rates of duty.

CUSTOMS TARIFF.

IMPORT DUTIES,

NOTE.—The headings of the respective classes in schedules A and B are used solely for convenience of classification, and shall not in any way affect the interpretation of the Tariff.

The word 'iron' includes steel, or steel and iron combined.

Neither steam-engines, nor parts of steam-engines, nor boilers (land or marine), nor feed-water heaters, fuel-economizers, steam superheaters, or mechanical stokers are included in the expression 'machines' or 'machinery' as used in the Tariff.

SCHEDULE A.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS I.		
<i>Foods and Articles for Human Consumption.</i>		
Bacon and hams.....	Lb. 2d.	2d.
Biscuits, ships', plain and unsweetened; also dog biscuits.....	Cwt. 3s. 7½d.	3s.
Biscuits, other kinds.....	Lb. 2½d.	2d.
Candied peel and drained peel.....	Lb. 3½d.	3d.

Brooms, brushes and brushware.	"	37½ %	25 %
Granite and other stone, dressed or polished, and articles made therefrom; also imitation stone, dressed or polished, and articles made therefrom, or from cement.	"	37½ %	25 %
Soap, not otherwise enumerated.	"	37½ %	25 %

In addition to any duty chargeable by law on any goods imported into the colony, a further duty of 20 per cent *ad valorem* is charged when the goods are *prison made*.

SCHEDULE B.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS I.		
<i>Foods, &c.</i>		
Almonds and nuts, except walnuts.....	Free.	Free.
Anchovies, salted, in casks, or other containers, capable of holding 28 lbs. net or over.....	"	"
Arrowroot, sago, tapioca, macaroni, vermicelli, rice-flour, prepared barley-flour, potato-flour, infants' and invalid's <i>farinaceous foods</i>	"	"
Cocoa or cacao butter, cocoanut butter, nut butter, and other refined vegetable butters or fats.....	"	"
Salt.....	"	"
Rice, dressed or undressed; also rice meal refuse and rice meal.....	"	"
Soy, in vessels exceeding 10 gallons capacity.....	"	"
CLASS IV.		
<i>Non-alcoholic Beverages, &c.</i>		
Cocoa-beans, uncrushed.....	Free.	Free.
Coffee, raw.....	"	"
Fruit-juices, or imitation fruit-juices, unsweetened, in containers of 10 gallons capacity or over.....	"	"
Tea in bulk, viz., in packages of 5 lbs. or over net weight of tea.....	2d. per lb.	"
CLASS V.		
<i>Drugs, &c.</i>		
Acids, viz.: boracic; carbolic; chromic; citric; fluoric; formic; lactic; muriatic; nitric; oleic; oxalic; picric; pyrogallic; salicylic; sulphuric.....	Free.	Free.
Concentrated extracts, or essences, in liquid form, or preserved in fat, for the purpose of manufacturing perfumery, when entered to be warehoused in a manufacturing warehouse for the purpose of making perfumery or other articles therein.....	"	"
Dextrine, n. e. o.....	"	"
Disinfectants.....	"	"
Drugs and chemicals, viz.:—		
Carnauba wax.....	Free.	Free.
Catechu.....	"	"
Cochineal.....	"	"
Creosote, <i>crude or commercial</i>	"	"
Crude distillates of coal-tar or wood, in vessels containing 10 gallons or over, for the manufacture of disinfectants in New Zealand.....	"	"
Formic aldehyde, and solution thereof.....	"	"
Fusel oil.....	"	"
Gall nuts.....	"	"
Glycerine, <i>crude</i>	"	"
Gums—viz., arabic, benzoin, damar, tragacanth, artificial gum-arabic.....	"	"
Liquefied gases, and compressed gases.....	"	"
Liquorice in blocks of 7 lbs. net and over, or soft liquorice-extract in bulk, in tins or other vessels capable of holding 7 lbs. net or over.....	"	"
Naphthalene, crude or refined.....	"	"
Saffron.....	"	"
Strychnine, and salts of strychnine.....	"	"
Sugar of milk.....	"	"
Sulphur.....	"	"
Turmeric.....	"	"
Alum, alum sulphate.....	"	"
Ammonium chloride, or sal ammoniac, ammonium sulphate.....	"	"
Arsenic and arsenates.....	"	"
Borax.....	"	"
Calcium carbide, chloride, sulphate, sulphite, and bisulphide; chlorinated lime.....	"	"
Carbon bisulphide.....	"	"
Copper sulphate, or bluestone, oxide of copper.....	"	"
Iron sulphates.....	"	"
Magnesium sulphite, and bisulphite.....	"	"
Manganese oxides.....	"	"
Phosphorus.....	"	"
Potash; pearlsh; potash, caustic, chlorate, cyanide, nitrate (or salt-petre), permanganate, prussiates, sulphite, and bisulphite; metallic potassium.....	"	"

SCHEDULE B—Continued.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS V—Concluded.		
Drugs and chemicals— <i>Concluded</i> —		
Salts of thorium, zirconium, or other rare metals, and solutions thereof, including mixtures of same suited for the manufacture of incandescent mantles.	Free.	Free.
Silver nitrates in crystals.	"	"
Soda acetate, crude; soda ash; soda arseniate, anhydrous carbonate, caustic, cyanide, bisulphite, hyposulphite, silicate, sulphate, sulphide, sulphite, nitrate, permanganate.	"	"
Metallic sodium, sodium peroxide.	"	"
Zinc chloride.	"	"
(NOTE.—It is provided in the new Tariff that mixtures of any of the articles enumerated under this Schedule as drugs and chemicals, with each other, or with chemicals, or substances not enumerated, shall, if not provided for elsewhere, in the Tariff be charged as medicinal preparations not otherwise enumerated, or chemicals not otherwise enumerated under Schedule A, Class V.)		
Drugs crude, not powdered, and unsuited for use as foods, or in the manufacture thereof, viz.: barks, woods, twigs, leaves, herbs, flowers (except hops), roots, corms, gums, balsams, inspissated juices (except opium), seeds, fruits, fruit rinds, pitch, cantharides, ergot; also powdered pyrethrum flowers or dalmatian powder and powdered hellebore, <i>in bulk</i> .	"	"
Essential oils, except eucalyptus; cod liver oil; oil of rodim.	"	"
Horse and cattle drenches.	"	"
Insecticides for agricultural uses, also tree washes.	"	"
Opium, when entered to be warehoused in a manufacturing warehouse, for the purpose of making therein approved medicinal preparations	"	"
Scrub exterminators.	"	"
Sheep dip; sheep drenches; sheep licks.	"	"
Surgical and dental instruments; also the following surgeons', physicians', dentists', and opticians' materials, viz.: antiseptic dressings, gauzes, lint, tow, cotton, wool, poroplastic felt, adhesive plaster, oiled silk or other fabric, spongio piline, bandages, catgut, and sterilized, and other sewings, thermometers; also appliances including splints for wear, <i>peculiarly adapted</i> to correct a deformity of the human body, to afford support to an abnormal condition of the human body, or to reduce or alleviate such condition, or to substitute any part of such body.	"	"
Crutches; ear trumpets, ear tubes, and audiphones, for the partially deaf. Opticians' trial cases, lenses, and frames, spectacles and magnifying glasses, ophthalmoscopes, optometers and other measuring instruments, test cards, and diagrams, artificial eyes (demonstration and other).	"	"
Dentists' materials, viz.: artificial teeth, tooth crowns, celluloid blanks, base plates, denture strengtheners, gutta percha stick, pellets, and sheets, rubber dam, amadou absorbent, absorbent paper, rubber in sheets, metal-plate, -wire, -foil, -sticks; solder; fusible metal, porcelain powder, and enamel, inlays, modelling composition, and wax, investment compound, amalgam, and cement; also such other appliances and materials <i>peculiar</i> to surgical or dental use as may from time to time be enumerated in any order of the Minister.	"	"
Scientific and philosophical instruments and apparatus, namely— <i>Assay-balances; laboratory retorts, and laboratory flasks and other instruments, and apparatus, for chemical analysis, and assay work; assay furnaces, including dentists', and jewellers' furnaces; also such instruments, and apparatus, suited strictly for scientific and philosophical purposes, as may from time to time be approved by the Minister.</i>	"	"
CLASS VI.		
<i>Clothing and Textiles.</i>		
Brace-elastic, and brace-mountings.	Free.	Free.
Brattice cloth, made of jute or hessian.	"	"
Bunting, in the piece.	"	"
Butter, cloth; also cheese cloth, and cheese bandages or caps.	20 %	"
Bulions, tapes, wadding, pins, needles.	Free	"
Calico, white and grey, also cotton sheetings, in the piece.	"	"
Corduroy, moleskin, and plain beaver skin, of cotton, in the piece.	"	"
Coloured cotton shirtings, flannelette shirtings.	"	"
Forfar, dowlas, and flax sheeting, when cut up under supervision in sizes not exceeding 47 in. by 36 in., for making flour bags, and not exceeding 54 in., for lining wool mats.	"	"

SCHEDULE B—Continued.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS VI—Concluded.		
Cotton or linen <i>piece</i> goods, and unions of the same, not otherwise enumerated, except <i>imitation silks</i> composed of any material or substance whatsoever.	Free.	Free.
Fur skins, sun-dried or green.	"	"
Gold or silver lace or braid for military clothing, featherstitch braid.	"	"
Hatmakers' materials, viz.: felt hoods; shellac; galloons; calicoes; spale boards for hat boxes; leathers; silk plush, in the piece; linings, when cut up or otherwise, under such conditions as the Minister may prescribe; blocks; moulds; frames; ventilators; and tassels.	"	"
Hessians, plain or striped, and scrim.	"	"
Leather cloth, plain colours.	"	"
Minor articles, (required in the making-up of apparel, boots, shoes, hats, caps, saddlery, umbrellas, parasols, and sun-shades), enumerated in any order of the Minister, and published in the <i>Gazette</i> .	"	"
Ostrich feathers grown in New Zealand, when returned from abroad dressed, or dyed, upon evidence being produced to the satisfaction of a collector of customs as to their previous exportation.	"	"
Sailcloth, canvas, and unbleached double-warped duck, in the piece.	"	"
Sewing cottons, silks, and threads; angola mendings not exceeding 45 yards in length; crewel, flourishing, embroidery, darning, knitting and crochet threads, of silk, linen or cotton, or unions of the same, plain or fancy; macrame thread or macrame twine.	"	"
Silk for flour dressing, in the piece.	"	"
Silk twist (shoemakers', and saddlers').	"	"
Staymakers', binding, eyelets, corset-fasteners, jean, ticks, lasting, sateen, and cotell; also corset-shields, and bust protectors.	"	"
Tailors' trimmings, viz.: haircloth; plain or coloured imitation haircloth; canvas; buckram; wadding and padding; silk, worsted, and cotton bindings, and braids; stay bindings; Russia braids; shoulder-pads; buckles; silesias; drab, slate, and brown jeans; pocketings; slate, black, and brown dyed unions and linens; Verona, and Italian cloth, of cotton or wool, or unions of the same; also such other lining materials as may be approved by the Minister.	"	"
Tubular woven cotton cloth, in the piece, for meat wraps.	20 % <i>ad val.</i>	"
Umbrella-makers' materials, viz.: reversible, and levantine silk mixtures, gloria, and satin de chene, of not less than 44 in. in width; alpaca cloth, with border; zanella cloth, with border; also other piece-goods on such conditions as the Minister may approve; sticks, runners, notches, caps, ferrules, cups, ribs, stretchers, tips, and rings.	Free.	"
Union textiles, not otherwise enumerated, in the piece, the invoice value of which does not exceed 6d. the yard when cut up and made into shirts or pyjamas, under such conditions and regulations as the Minister may prescribe.	"	"
Waterproof material in the piece, having within, or upon it, a coating of indarubber.	"	"
CLASS VII.		
<i>Leather, and Articles used in Leather Manufactures.</i>		
Boot elastic.	Free.	Free.
Bootmakers' linings, canvas, plain or coloured, bag and portmanteau linings, of such materials, qualities, and patterns, as may be approved by the Minister.	"	"
Boots, shoes, shoettes, sandals, clogs, and pattens, slippers, and goloshes, namely, children's No. 0 to 6.	10 % <i>ad val.</i>	"
Cork soles, and cork soles; moulded shoe and slipper soles of rubber.	10 %	"
East India kip, also hides, crust or rough tanned, but undressed.	Free.	"
Goat-skins, and kid-skins, however dressed.	"	"
Grindery, viz.: button fasteners, and staples; eyelets, and hook eyelets, and eyelet rings; tangles; spikes for running or cricketing shoes; boot protectors; wood or rubber heels or knobs; leather toe-tips, "Wells" patent or a similar make, stiffeners or toes moulded ready for use, copper toes, boot stretchers and trees, hollow-fillers, japanned toe-tips; legging springs and stiffeners; lasting tacks, pegs, brass rivets, iron rivets; brass, iron, and copper cut-bills; steel points; sparrow bills; wrought, cut, and malleable hob-nails; Hungarian nails; wrought and cut tip-nails; iron and wooden lasts; stands for iron lasts; sole, heel, stiffening, and toe-cap knives; shoemakers' wax; heel-balls; bristles, hemp and flax; rubber solution or cement; wetting cut into strips or in coils ready for use; shoemakers' binding or beading; wetting leather cut into strips not exceeding 1 in. in width; webbing; tanners', curriers' and bootmakers' <i>inks</i> or <i>stains</i> ; bootmakers' sectional cutting-boards; glass or emery paper, or cloth, on sheets, in rolls, or cut into shapes.	"	"

SCHEDULE B—Continued.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS VII—Concluded.		
Hog-skins	Free.	Free.
Kangaroo, and wallaby skins, undressed	"	"
Leather, japanned or enamelled	"	"
Saddle-trees	"	"
Saddlers' ironmongery (except bits and stirrup-irons), hames, and mounts for harness; straining, surcingle, brace, girth, and roller webs; collar check, and the same article plain, of such quality as may be approved by the Minister; legging-buckles	"	"
Metal articles required to repair or complete riding or driving harness, or saddlery, to be repaired or made in the colony	"	"
Tanning materials, <i>crude</i>	"	"
CLASS VIII.		
<i>Furniture, &c.</i>		
Blind webbing and tape	Free.	Free.
Worsted covered cord and solid glaze cord for venetian and other blinds	"	"
Upholsterers' materials, viz.: webbing, hair seating, imitation hair-seating; curled hair; gimp and cord of wool, cotton, or silk tufts and studs	"	"
Chair canvas	"	"
CLASS IX.		
<i>China, Glass, &c.</i>		
Bottles, empty, plain, stone; also empty plain glass bottles, not being cut or ground; jars, plain glass, and plain earthen jars, up to three inches diameter at mouth	Free.	Free.
Earthen or glass roofing tiles, ridging or finials; also roofing slates	"	"
Glass plates (engraved), for photo-lithographic work	"	"
Jars or other dutiable vessels containing free goods, or goods subject to a fixed rate of duty, and being ordinary trade packages for the goods contained in them	"	"
Lamps, miners' safety, and glasses therefor; lamps peculiarly adapted for use on harbour beacons and lighthouses, also appliances peculiar to such lamps; side lights and head lights especially suited for the use of ships	"	"
CLASS X.		
<i>Fancy Goods, &c.</i>		
Action work and keys, in frames or otherwise, iron or metal piano frames for manufacture of organs, harmoniums, and pianos; organ pipes and stop-knobs	Free.	Free.
Articles, being exhibits for public display only in public museums, whether purchased under bond or directly imported by, or for presentation to such museums, upon declaration that such goods will not be sold or otherwise disposed of in New Zealand without payment of any duty which may be payable	"	"
Artists' materials, viz.: canvas in the piece or on stretchers, oiled paper or drawing paper in sheets or blocks; colours, brushes, palettes and palette knives	10 %	"
Cigarette papers entered to be warehoused in any licensed tobacco manufactory for the manufacture therein of cigarettes	Free.	"
Films for bioscopes, cinematographs, and kinetoscopes	"	"
Microscopes and telescopes and slides, and lenses for same	"	"
Paintings, statuary, and works of art, whether purchased under bond or directly imported by, or for presentation to any public institution or art association registered as a body corporate, for display in the buildings of such institution or association, and not to be sold or otherwise disposed of; statuary or works of art, whether purchased under bond, or directly imported for display in any public park or place, on conditions prescribed by the Minister	"	"
Paintings or pictures painted or drawn by New Zealand students within five years of the time of their departure from the colony for the purpose of undergoing a period of tuition abroad for the first time, upon evidence being produced to the satisfaction of a collector of customs	"	"
Photographic cameras and lenses, including focussing cloths and camera covers	10 %	"
Photographs of personal friends in letters or packets	Free.	"
Precious stones, cut or uncut, if unmounted	"	"

SCHEDULE B—Continued.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS X—Concluded.		
Sensitized surfaces and albumenized paper, plain, not being post cards or other stationery..... <i>ad val.</i>	10 %	Free.
Slides for magic lanterns.....	Free.	"
CLASS XI.		
<i>Paper, &c.</i>		
(NOTE.—It is provided in the new Tariff that in every case where exemption from duty is governed by a size, the equivalent area shall be exempt under like condition.)		
Bookbinders' materials, viz.: cloth, leather, thread, headbands, webbing, end-papers, tacketing-gut, marbling colours, marble paper, blue or red paste for ruling ink, staple-presses, wire staples, staple-sticks.....	Free.	Free.
Butter paper (known as vegetable parchment paper), and waxed paper, unprinted.....	"	"
(NOTE.—It is stated in the new Tariff that butter paper or waxed paper, printed, shall be charged as wrapping paper or wrappers of all kinds, printed or lithographed, Schedule A, Class XI.)		
Cardboard, pasteboard, wood-pulp board, and corrugated board, of size not less than that known as "royal," and weighing not less than 2 oz. per sheet of "royal" size; also strawboard of size not less than that known as "royal" and weighing not less than 3 ozs. per sheet of "royal" size.....	"	"
Cardboard boxes, material for, viz.: gold and silver paper, plain or embossed; embossed paper in strips; gelatine or coloured papers; known as "box papers"..... <i>ad val.</i>	20 %	"
Cartridge drawing paper.....	Free.	"
Celluloid, plain, in sheets, not otherwise enumerated.....	"	"
Cloth-lined boards, not less than "royal" size.....	"	"
Cloth-lined paper, and enamelled, gelatine, and metallic paper, of size not less than "demy;" also "ivorite" of size not less than "demy".....	"	"
Copying-paper, medium and larger sizes, in original mill wrappers and labels.....	"	"
Copy-books, having printed headlines on each page; also drawing books..... <i>ad val.</i>	10 %	"
Ink, printing.....	10 %	"
Masticated para.....	Free.	"
Millboard, and bookbinders' leather board.....	"	"
Paper, hand-made or machine-made, <i>book or writing</i> , when in original wrappers, of sizes not less than the size known as "demy," and not being a wrapping wrapper, or of the same quality as a wrapping paper.....	"	"
<i>Paper, printing</i> <i>ad val.</i>	20 %	"
Printed books, papers, and music, not otherwise enumerated, excepting advertising matter.....	Free.	"
Sunday school tickets and reward cards, being scriptural or religious motto cards, not exceeding 5 <i>d.</i> per dozen invoice value, and not exceeding 6 in. by 4 in. in size, and having no reference upon them to Christmas, New Year, Easter, or birthdays.....	"	"
CLASS XII.		
<i>Metals.</i>		
Agricultural machines, and agricultural implements, not otherwise enumerated; also parts peculiar to the manufacture or repair of agricultural machines, and implements, including chaff-cutting knives, fittings for threshing mills, forgings or castings for ploughs, discs for harrows, plough-shares, mould-board plates, and steel share-plates cut to pattern, skeith-plates, tilt-rakes, also reaper-knife sections or fingers, finished brass, and steel springs.....	Free.	Free.
(NOTE.—It is stated in the new Tariff that agriculture as applied to the tariff shall include horticulture and viticulture.)		
Anchor..... <i>ad val.</i>	10 %	"
Artificers' tools not otherwise enumerated, not including brushes or brush-ware; also the following tools, viz.: axes and hatchets, spades, shovels, forks, picks, mattocks, quartz, and knapping hammers, scythes, sheep-shears, reaping hooks, soldering irons, paperhangers' scissors, butchers' saws or cleavers; measuring bands or tapes; coal cutters and air picks.....	Free.	"
Axles, axle-arms, and axle-boxes.....	"	"
Bellows nails.....	"	"

SCHEDULE B—Continued.

Names of Articles.	RATES OF DUTY.	
	General Tariff.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
CLASS XII—Continued.		
Bicycles and tricycles, fittings for, viz.: rubber tyres, pneumatic rubber tyres, outside covers of rubber, and inner tubes, handle grips, pedal rubbers; also the following articles when not plated japanned, enamelled or varnished, viz., drop forgings, stampings, steel balls, weldless steel tubes with or without butted ends, wood or metal rims (not bored), spokes, forks, stays, handle-bars, and seat pillars, <i>un-built</i> , bracket shells, fork, and stay ends, fork tips, bridges, crowns, and lugs; also ball heads complete when not brazed, including all plated parts. Hubs complete, plated or otherwise, sprockets, chains and chain wheels, whether plated or not, bottom brackets, complete, including axles, cups, cranks, and pedals, plated or otherwise.	<i>ad val.</i>	*20 %
Beekeepers' tools, implements, and apparatus, viz.: metal fittings for beehives, bee smokers, wax extractors, rubber gloves, gloves of textile soaked in oil, queen cages, comb foundation, foundation machines, honey knives, honey extractors, queen rearing outfits, wax presses, <i>tools peculiar to the use of beekeepers</i>		Free.
Blacksmiths' anvils, forges, and fans.	<i>ad val.</i>	10 %
Bolts, and bolt ends, up to 24 inches in length; nuts, blank or screwed nuts, black or finished nuts.		Free.
Brass, copper, and tin, in pigs, bars, or sheets; also tinned hoops.		"
Brass or metal tubing and stamped work, in the rough.		"
Caps, percussion.	<i>ad val.</i>	10 %
Card clothing, for woollen-mills, and for paper-mills.		Free.
Castings for ships; also propeller-screws, including only bosses and blades. <i>ad val.</i>		20 %
Chains, iron, plain, or with hook, swivel, or ring, attached.	"	10 %
Copper, brass, and composition rod, bolt, sheathing, and nails.		Free.
Couch-roll jackets, machine wires, beater-bars, and strainer-plates, for paper-mills.		"
Crucibles.		"
Electrical materials, viz.: insulated cable and wire, carbon in block, sheet, or rod, arc lamp carbons; mica, vulcanite and other insulating material, rubber or gutta-percha solutions, insulating tape.		"
Electricians' portable testing sets.		"
Emery grinding machines, and emery wheels.		"
Empty iron drums, not exceeding 10 gallons capacity.		"
Engineers', and all metal, or wood, or stone workers' machine tools, or hand tools, not including brushes or brushware.		"
Engine-governors.	<i>ad val.</i>	10 %
Eyeballs.		Free.
Fire-engines, chemical fire-engines, and chemical fire-extinguishers; also fire-hose and couplings therefor, portable fire-escapes, fire-ladders, fire-reels, and firemen's helmets, if declared, to the satisfaction of the collector, for the use of a fire-brigade.	<i>ad val.</i>	10 %
Fish-hooks, unmounted, and without attachments.		Free.
Galvanising baths, welded.		"
Gas-engines, and hammers, and oil-engines.	<i>ad val.</i>	20 %
Glassmakers' moulds.		Free.
Hydraulic wheel presses.		"
Iron boiler-plates and unflanged end-plates for boilers; boiler tubes not exceeding 6 in. in internal diameter and unflanged; expansion-rings; furnace-flues.	<i>ad val.</i>	20 %
Iron pipes, wrought and wood or fibre pipes, not exceeding 6 in. in internal diameter, also knees, bends, elbows, and other fittings for same; cast-iron pipes not exceeding 9 in. in internal diameter, also knees, bends, elbows, and other fittings for the same; wrought-iron boring, casing, and lining tubes, for oil boring, mining, or well-sinking purposes.	<i>ad val.</i>	20 %
Iron, pig.		Free.
Iron, plain, black, viz.: sheet, plate, hoop, rod, bolt, bar, angle, tee, channel; plain iron rolled girders; rolled chequered plates; shafting, plain rolled or plain turned, but otherwise unwrought.	<i>ad val.</i>	20 %
Iron and steel cordage.		20 %
Lead, in pigs and bars.		Free.
Locomotive wheels and tires, including wheels and tires for railway or tramway passenger cars, coil spiral and volute springs, suited for the manufacture of locomotives, automatic air-pressure brakes specially suited for use on railway carriages and wagons.		"
Machine saw blades.		"
Machinery, viz.: <i>dairying machinery</i> (including cream-separating machines, also coolers).		"
Vacuum pumps for milking machines, when imported along with the machine to which they belong.		"

* Rubber tyres, pneumatic rubber tyres, and outside covers of rubber and inner tubes are free.

SCHEDULE B—Continued.

RATES OF DUTY.	
Names of Articles.	Tariff on Goods the Produce or Manufacture of some part of the British Dominions.
General Tariff.	
CLASS XII—Concluded.	
<i>Machinery, mining and gold saving; also briquette-making and coal-washing machines, rock-breaking machines, Trommels' stamper batteries, ore feeders, grizzly bars, steel shoes and dies, ore-crushing rolls, ball mills, grinding pans, tube mills, concentrators and rubber endless belts for same battery screening, woven or punched; also the following machines, materials, and appliances, when imported for mining purposes, viz.:</i>	<i>ad val.</i> *10 % Free.
Air compressors, not including the motive power for charging the same	10 %
Chain links and rollers for conveyors, and conveyor belts of rubber or fibre.	10 %
Electric exploders.	10 %
Fans for mine ventilation.	10 %
Filter presses.	10 %

Metal tubes in the rough, having a slit through their whole length, suited for the manufacture of fenders, bedsteads, gates, and the like articles.	Free.
Metal-wire of all kinds, plain; metal cordage not otherwise enumerated, not being gold or silver; also barbed fencing wire, and fencing staples.	"
Metal wove wire, and metal gauze; also wire netting, and expanded metal lathing or fencing, in the piece.	<i>ad val.</i> 10 %
Metallic capsules.	10 %
Meters, gas, or electricity, being household supply meters.	Free.
Meters, water.	"
Motor engines for bicycles.	<i>ad val.</i> 20 %
Moulders' chaplets and dowels.	Free.
Perambulators, and the like vehicles, fittings for, not otherwise enumerated.	<i>ad val.</i> 10 %
Perforated or cellular sheet zinc or iron.	10 %
Portable engines on four or any greater number of wheels, with boiler of locomotive type; also traction engines.	" 10 %
Printing type, and printing materials not otherwise enumerated, suited only for the use of printers.	" 10 %
Rails for railways and tramways, including lay-outs, and points, and crossings, for same; also fish-plates.	<i>ad val.</i> 20 %
Rivets, and washers.	Free.
Rock drills, diamond drills, and drill sharpeners.	"
Set screws, engineers' studs, and split pins.	"
Sewing, knitting, and kilting machines.	"
Spray pumps, not being syringes.	"
Steam or hydraulic pressure, and vacuum gauges; pressure indicators or pressure gauges for gas or oil engines.	<i>ad val.</i> 10 %
Speed indicators, negineers', for testing machinery.	10 %
Surveyors' instruments, viz.: steel bands, chains, measuring tapes, field instruments, and drawing instruments; draughtsmen's drawing instruments.	" 10 %
Tacks, and nails, 1 in. and under.	Free.
Tea packing lead.	"
Tinsmiths' fittings, and furniture, including stamped or blocked tin or copper, planished or unplanned.	"
Welded and flanged boiler furnaces, plain or corrugated.	<i>ad val.</i> 10 %
Zinc, plain sheet.	Free.
Zinc plate or copper plates for photolithographic work.	"

* Concentrators and rubber endless belts for same are to remain free of duty after March 31, 1908.

SCHEDULE B—Continued.

Tobacco for sheep-wash or for insecticide, after being rendered unfit for human consumption to the satisfaction of the Minister.....	"	"
Treacle or molasses, mixed with bone-black in proportions to the satisfaction of the Minister.....	"	"
Typewriters.....	"	"
Wax, bottling.....	"	"
Wool packs and wool pockets.....	"	"
Yarn—viz.: coir, flax, jute and hemp.....	"	"
Articles and materials (as may from time to time be specified by the Minister) which are suited only for, and are to be used solely in, the fabrication or repair of goods within the colony. All decisions of the Minister in reference to articles so admitted free to be published from time to time in the <i>Gazette</i>	"	"
And all articles not otherwise enumerated.....	"	"
Provided that all goods falling under this Schedule, which are <i>prison made</i> , shall be charged an <i>ad valorem</i> duty of 20 per cent.....		

TARIFF CHANGES

BRITISH INDIA.

I.—PROHIBITION TO IMPORT PINK-COLOURED QUININE.

(Notification—By the Government of India, Department of Commerce and Industry, No. 7079-91, dated August 23, 1907.—Customs Circular No. VII of 1907.)

In exercise of the powers conferred by section 19 of the Sea Customs Act, 1878 (VIII of 1878), the Governor General in Council is pleased to prohibit the bringing by sea or by land into British India of quinine which has been coloured pink.

II.—PROHIBITION TO IMPORT 'NOVOCAIN' BY POST.

(Notification—By the Government of India, Department of Commerce and Industry, No. 7079-91, dated August 24, 1907.—Customs Circular No. VII of 1907.)

In exercise of the power conferred by section 19 of the Sea Customs Act, 1878 (VIII of 1878), the Governor General in Council is pleased to prohibit the bringing by sea or by land into British India of 'novocain' by means of the post; and to restrict its importation by any other means to cases in which it is imported by persons, or by their authorized agents, who have been specially permitted to import the drug by a local government or administration.

III.—RULES FOR EXEMPTION FROM THE PAYMENT OF CUSTOMS DUTY OF RE-IMPORTED COMMERCIAL SAMPLES NOT INTENDED FOR SALE.

(Notification—By the Government of India, Department of Commerce and Industry, No. 8595-82, dated October 9, 1907.—Customs Circular No. VIII of 1907.)

1. Samples of goods, not intended for sale, re-imported by commercial travellers into British India shall be passed free of duty, provided that the collector of customs at the port of re-importation is satisfied:

- (i) that duty was paid on first import;
- (ii) of the identity of the articles;
- (iii) that no drawback was paid on export;
- (iv) that the ownership in the articles has not changed since its first import; and
- (v) that no more than six months have passed since the articles were exported.

2. In order to be able to claim the benefit of this concession, commercial travellers must observe the following procedure:—

(1) When the samples are first imported into British India, commercial travellers will be required to produce to the collector of customs a certificate or letter of identity from their principals or otherwise satisfy the collector of their eligibility for the concession. An invoice in duplicate, showing each article in detail, should be filed at the Custom House. The original will be retained by the Customs authorities. Each page of the duplicate will be stamped with the Custom House seal, and will be endorsed, over the signature of a Customs officer, with a reference to the bill of entry on which the samples were assessed to duty. It will be returned together with a certified copy of the bill of entry to the travellers.

(2) The certified copy of the bill of entry must, on each occasion on which the samples are exported from a port in British India, to a foreign port, be produced to the customs collector of the port of export, who will endorse, after such examination of the samples as he may think necessary, the copy of the bill of entry with a certificate that no drawback had been paid, together with the date of exportation. On re-importation from a foreign port the bill of entry must similarly be produced to the collector of customs, who will endorse, after such examination of the samples as he may think necessary, the date of re-importation on the bill of entry.

3. When the samples are finally exported under claim of drawback, a certificate of examination shall be recorded on the certified copy of the bill of entry by a Customs officer after verification of the necessary particulars in regard to the identification of the articles and payment of duty. The certified copy of the bill of entry and the duplicate copy of the invoice shall be forwarded to the port of first importation.

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent also for New Zealand.
D. H. Ross, Stock Exchange Building, Melbourne.

BRITISH WEST INDIES.

E. H. S. Flood, agent also for the Bermudas and British Guiana.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Club Hotel, Yokohama, Japan.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

A. F. Jury, Old Castle Buildings, Preeson's Row, Liverpool.
G. H. Mitchell, 43 Cannon Street, Birmingham.

H. N. Murray, Exeter.

L. Burnett, York.

John Webster, 35-37 St. Enoch Square, Glasgow.

John McLennan, Aberdeen.

E. O'Kelly, 17-19 Victoria Street, Belfast.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

*(Mr. Alexander MacLean.)*ROOM B, 14 BUND,
YOKOHAMA, November 30, 1907.

MONTHLY RETURN OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the monthly return, for the ten months ending October 31, of the present and the previous year:—

EXPORTS TO CANADA.

	1907.	1906.
Silk, raw.. . . .	\$ 15,378	\$145,090
Silk tissues, Habutai.. . . .	165,051	253,899
Silk handkerchiefs.. . . .	88,901	129,671
Cotton tissues.. . . .	3,730	4,520
Mata and mattings for floor (Hanagoza).. . . .	46,560	35,498
Porcelain and earthenware.. . . .	93,403	82,997
Lacquered ware.. . . .	8,102	9,096
Tea.. . . .	501,686	364,318
Rice.. . . .	209,281	114,102
Sake.. . . .	26,165	11,742
Straw-plaits and chip-braids.. . . .	549	2,476
Camphor.. . . .	2,355	6,623

IMPORTS FROM CANADA.

	1907.	1906.
Flour.. . . .	\$122,294	\$ 64,239

The 'principal items' given in the monthly return number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items making up the aggregate of trade, the annual return has to be awaited.

GENERAL TRADE RETURNS.

Principal imports for ten months ending October 31, of the present and the previous year:—

	1907.	1906.
Flour, wheat.. . . .	\$ 2,675,631	\$ 3,691,632
Butter.. . . .	43,973	81,624
Salted salmon.. . . .	119,434	563,227
Condensed milk.. . . .	817,123	614,418
Artificial fertilizers, &c.. . . .	20,169,554	16,302,698
Leather, sole.. . . .	996,672	426,731
Lead, pig, ingot and slab.. . . .	354,739	575,905
Printing paper.. . . .	1,475,065	880,000
Cotton, duck.. . . .	42,848	47,579
Cotton, prints.. . . .	1,194,849	1,135,356
Cotton, satteens and Italians.. . . .	876,568	976,519
White shirtings.. . . .	538,478	578,826
Grey shirtings.. . . .	3,224,566	3,617,122
Pulp.. . . .	744,048	768,872

Total Imports.

For ten months ending October 31:—

1907..	\$418,976,590
1906..	356,796,465

Total Exports.

For ten months ending October 31:—

1907..	\$365,541,046
1906..	337,079,285

THE AUTOMOBILE TRADE.

Vigorous efforts have been made of late to promote the sale in this country of several of the many patterns of automobile vehicles. A company with this object in view was formed in Tokyo, within the last few months, but the results seem to have been disappointing. It has been decided to wind up the enterprise, and to return the share money, already paid up, to the shareholders. In the cities and other localities where the roads are adapted for the use of this class of vehicles, there would appear to be a good opportunity to make them serviceable; but the high price at which they are yet held is perhaps the principal bar to profitable business. The universal use and real convenience of the Jinrikish may be taken for another reason why this class of vehicle will probably not, for some time, find a market worth catering to.

THE WHALING INDUSTRY.

The whale fishery in Japanese waters this season is announced to be a comparative failure. Five of the more conspicuous companies have got only twenty whales in all. The average catch by all the companies, so far, according to latest returns, is put at less than ten per company. This is described as a very unsatisfactory result.

NATIONAL LOANS OF JAPAN.

Official investigations of the result which has been recently made public, placed the total of Japan's national loans at \$1,152,158,500. This gross sum is divided into home loans \$569,307,500, and foreign loans \$582,851,000.

The Tokyo press reports that the result of a conference between the Elder Statesmen and the Cabinet Ministers, is an agreement to increase the taxation and to postpone various undertakings in view of the next fiscal year; the postponing of previously contemplated undertakings of the department, including the naval and war offices. The requirements of the year will be reduced by between fifteen and twenty million dollars. The chief resources of return from the increase of taxation are the government tobacco monopoly, the sugar and kerosene consumption taxes and the sake manufacturing tax.

INCREASE OF BANK RATES.

The universal high pressure shown by the financial barometer, rather than the immediate demand of home trade, has caused the Bank of Japan to announce an increase in the rate of interest. The Yokohama Specie Bank, the next in importance to the Bank of Japan, has announced an increase also of interest on over-draft loans and current discounts.

From the invaluable commercial columns of the *Kobe Chronicle* the assurance is given that 'despite the general depression of trade during the present half-year, the result of the working of banks in Osaka is reported to be not less favourable than in the preceding half. The market value of stocks has much depreciated, but it is stated

that full provision was made for such a contingency in the account for the preceding period. Therefore, the decline has had but little effect on the position of the banks. Moreover, banks have worked very cautiously throughout the crisis, and it is expected they will be able to pay a dividend at the same rate as for the preceding period, and yet place greater amounts to reserve.'

What is stated of the banks at Osaka, a great commercial centre, is fairly applicable to the banks of Japan generally. They are doing admirably under the trying circumstances of a great speculative collapse.

JAPANESE WHEAT AND FLOUR.

An extensive bread, biscuit and fancy bakery and general supply firm, heretofore importers of flour for their own bakery, have recently been using flour ground in Tokyo from imported wheat. They say it is entirely satisfactory. There is no reason to be found in the incident of its being ground in Japan, why it should not be good; the grain being good, the rest depends upon the milling. To wheat growing countries, the milling interest excepted, it is perhaps not a serious consideration whether they export the flour or the raw material for its manufacture. But in any case there is no need to be unduly apprehensive. The country that grows the raw material has obviously the common advantage. In the case of flour the by-products are an important consideration; and the weakness of the market for the resultant feed will for a long time prevent the coming of a great industry out of the milling development in Japan.

The investigations made by the Department of Agriculture and Commerce, in reference to wheat produced in this country, afford some interesting particulars. They show that the weight of wheat produced in Japan is 35 kwamme (about 291 lbs.) per koku (= 5 bush.) on an average, which gives $24\frac{1}{2}$ kwamme of flour (about 203 lbs.), while the weight of imported wheat is 36.3 kwamme (about 301 lbs.), the flour obtained therefrom amounting to 27 kwamme (about 224 lbs.). Thus, it is shown that foreign wheat gives about 6 per cent more flour than Japanese wheat. According to men interested in the flour mill trade, says the report of the department, the market for wheat produced in Japan is 50 to 75 sen lower per koku (= 5 bush.) than that for imported wheat. (1 sen = $\frac{1}{2}$ G. cts.)

Wheat is produced in all parts of Japan, the Hokkaido (the Japanese far north) being the principal producing district. The output for 1905 throughout the Empire amounted to 37,555 bushels. Sorachi in Ishigari province in the Hokkaido is the district in which wheat is most largely produced, the output there representing 27 per cent of the total production of the country at large; and the quality of Sorachi wheat is regarded as the best. The wheat produced in the Hokkaido is partly consumed there and is supplied to Tokyo, Osaka and Miyagi prefecture. In view of its superior quality, Hokkaido wheat is on the same level as the imported, and is easily distinguished from wheat produced in other parts of Japan. To the southward the grain produced and not used locally goes to Osaka, Kobe and Nagasaki, where there is more or less milling facility.

Stocks in Yokohama and Tokyo are large, and prices are very weak. The local press gives the following as the market value of the several United States brands of flour per sack of 49 lbs.:—

Golden Gate.. . . .	gold.	\$1 67 $\frac{1}{2}$
Crown.. . . .	"	1 57 $\frac{1}{2}$
Lion.. . . .	"	1 47 $\frac{1}{2}$
Portland.. . . .	"	1 45
Gold.. . . .	"	1 40
Blue Flag.. . . .	"	1 40
Red Shield.. . . .	"	1 40
Trophy.. . . .	"	1 40

THE SILK MARKET.

Approaching the end of the year, the substance of the review of the silk trade by the *Mainichi Dempo* (*Daily Telegraph*), of Tokyo, and the *Japan Mail*, of Yokohama, is to the effect that whereas this year's returns were expected to be much better than those of any previous year, the forecast has been upset by the panic in America. Thus the number of bales sent out of Japan, or contracted for between June and November, inclusive, during this year, was only 104,000, against 116,000 for the corresponding period of last year; but the higher prices which ruled this season relieved the situation greatly. Over 40,000 bales are now lying in Yokohama, and as the accommodation given by the banks on this stock alone represents a very large sum, the tightness of the money market is thereby greatly accentuated. The value of a bale of raw silk may be stated at G. \$500. The quantity held up by the disturbed market, as mentioned, will be about G. \$20,000,000.

A GOOD HARVEST RETURN.

The wheat and barley harvest of this year in Japan is regarded as the greatest on record. Returns made by the Department of Agriculture and Commerce show that the production of these grains in the Empire for this year was 110,837,430 bushels, showing an increase of 9,011,130 bushels, or 8·8 per cent on the figures for the preceding year, and an increase of 13,270,060 bushels, or 13·6 per cent as compared with a normal year. The success of the harvest is ascribed to favourable weather which prevailed after the sowing. Over a small portion of the Empire the growth was impeded by rain, but the weather improved shortly before the ear developed, and fine weather continued. The actual harvest showed an excess of over 9,000,000 bushels compared with the forecast issued in June.

THE POLICY OF NATIONAL MONOPOLY.

In spite of the fact that the policy of monopolizing industries and enterprises, by the government, has not in any case so far been productive of results that justify its pretensions, tendencies seem to show that it will probably be continued. There are other industries and enterprises that are the subject of rumour, in the press and otherwise, to the effect that they are to be brought under the control of the state; first, for the profit of the state; and second, for the benefit of the people; and, since these objects are synonymous, it is said to follow that the policy will prove advantageous to the commonwealth. Remark as to the absence of evident and tangible success so far may be met by the argument that radical changes are naturally followed by apparent set-back, and that reasonable time must be allowed for the promised advantages to supervene. At any rate that may be regarded as the situation in its best form, as it is now presented to observant criticism.

As to what is coming, the return of current paragraphs in the press, suggestive of the intention to monopolize the sugar trade with the industries incidental to sugar manufacture, by the government, is accepted as leaving little doubt. The *Japan Times*, understood to be, in respect of policy as well as locally, near to the government, says: 'Taking into consideration that such profitable business enterprises as the manufacture of tobacco, salt and railway ownership and operating have been taken up by the government, it is not impossible that the rumour with regard to sugar may turn out a realized fact in the long run, though the monopoly policy of the government has proved a failure in most cases. What effect would the government monopoly of sugar produce on the welfare of the nation? Though the total quantity consumed by the nation is not known, it admits of no question that the demand is growing year after year. And now that sugar is regarded as one of the most important of daily needed commodities, the rise of price must produce no small effect on the living of the nation.'

The increased cost of living in this country is universally remarked, and is one of the most disturbing experiences incidental to after-the-war circumstances. These monopoly appropriations are, of course, mainly for the purpose of revenue; but, although some people affect to believe that when they have served their purpose in that respect they will be relinquished, they attain a settled condition and the difficulty of government alienating the property of the state becomes practically insurmountable.

THE CURRENT YEAR'S TRADE.

Taking the year up to the 20th inst., it appears that exports totalled G. \$209,500,500, and imports G. \$239,954,500, the excess of imports thus being G. \$30,454,000.

Newspaper opinion, as expressed by the *Chuo Shimbun* (*Central News*) and by the *Japan Mail*, respectively of Tokyo and Yokohama, and also respectively representing the Japanese and foreign elements, is sufficiently unanimous to be unified to the effect that the excess of imports is certainly large, but on examining details it is found that this excess was due, not to the purchase of luxuries, but of raw material and machinery. In fact, the people may be said to have spent their money on things which will contribute to the development of the nation's producing power. Reviewing the trade returns for the past 40 years, it must be confessed that the development of the country's over-sea commerce has been one of the most remarkable features of the Meiji era. A complete statement is not yet possible with respect to the current year, but assuming that the return for the last ten days will bear a reasonable relation to those for the previous like periods, the volume of trade should reach considerably over 450 million dollars.

The comparative figures are as follows:—

Meiji	1..	Yen.	26,246,545
"	5..	"	43,201,462
"	10..	"	50,490,754
"	15..	"	69,992,586
"	20..	"	104,107,421
"	25..	"	167,181,766
"	30..	"	451,909,128
"	35..	"	582,981,800
"	36..	"	643,332,346
"	37..	"	725,698,804
"	38..	"	844,369,837
"	39..	"	842,539,000
"	40 (1907) ..	"	915,000,000

(1 Yen = 50 gold cts.)

It has also to be noted that the causes which contributed to reduce the volume of exports in the closing month of the latter year were altogether temporary; namely, the fall in the price of copper, the depreciation of silver, and the panic in the United States. These depressing factors can not be long operative, and, therefore, next year's trade may be looked forward to with confidence. Reviewing these figures, there is found no incentive to pessimistic view.

CORRECTION.

In report under date October 3, published in Monthly Report, for September, 1907, page 1008, respecting flour,—in the last paragraph relating to that subject are the words 'the second correspondent who writes under date June 10, is one of the numerous sort in trade generally.' The subsequent remarks are not relevant to the quotation from the correspondent who wrote under date June 10, but to the

correspondent who wrote under date June 1, and who rejected one of the best opportunities of getting his flour into this market, because he would not make a small consignment, as a trial shipment, to a highly responsible house. It will be a long time before he will make c.i.f. sales in this market without first introducing his brands and taking steps to popularize them.

PREDOMINANCE OF BRITISH TRADE.

A recent report on the foreign and coasting trade of China for 1906 gives the percentage of tonnage engaged as follows:—

Under the British flag 44·12 per cent, Chinese 21·35 per cent, Japanese 15·01 per cent, German 9·86 per cent, French 4·12 per cent, Norwegian 2·13 per cent, American 1·78 per cent, Dutch 0·44 per cent, Russian 0·38 per cent, Portuguese 0·24 per cent, Danish 0·23 per cent, Austro-Hungarian 0·22 per cent, Swedish 0·09 per cent, and Korean 0·03 per cent. Eliminating the Chinese, the British flag's percentage of the balance of tonnage in the foreign and coast trade respectively was 46·31 and 63·49 per cent.

ARTIFICIAL FERTILIZERS.

Companies for manufacturing fertilizers have been active this year. Returns made at the end of October show that the value of the output in two districts alone for 10 months amounted to \$5,500,000. When the value of output for November and this month is added, the total output for the year is estimated to exceed \$6,500,000. Last year the total was \$4,500,000. Imports of fertilizers have also increased. The value of sulphuric acid, ammonia, bean cake, fish manure, bone-powder, and other fertilizers imported from abroad up to the end of October this year, amounted to \$1,500,000, being more by \$150,000 than the figures for the whole of last year. Within the past five or six years, the consumption has shown an increase of 40 per cent each year.

LIFE INSURANCE PROSPECTS.

Referring to the working of life insurance companies, a vernacular contemporary observes that owing to the economic activity which prevailed during last year the life insurance business showed a great increase. Yet the increase this year has been still greater. In the case of leading companies, contracts for insurance show an increase of some 30 per cent. This is attributed to the increased interest aroused in life insurance among the Japanese in general, as well as to the general development of trade.

THE MAIL ROUTE VIA RUSSIA.

It is currently cited as an example of the speediness of the Siberian route over all others for the transmission of mails to and from far eastern ports, that letters by that route from Shanghai bearing post mark of October 4 were delivered in London at the same time as others by the German mail, via Sues, bearing the same post mark of September 20. It is recognized that Shanghai, as a given port, is thus brought nearer to us, in point of communication, than the Strait Settlements are at present. Exclusion of postal matter other than letters, detracts from the general advantage of this speedy communication, when it is found that newspaper and printed trade advices are not delivered for a fortnight after the dates of previously received letters. The difficulty in the way of sending printed matters by the Siberian post will have to be overcome before it will prove a formidable rival to commercial inter-communication.

THE BAMBOO TRADE.

The supply of bamboo is reported to be gradually decreasing, as bamboo groves have been attacked by a certain disease which causes decay. With the usual reliance upon the government as a universal benefice, the Kobe Bamboo Guild has addressed a memorial to the Minister for Agriculture and Commerce, asking that measures should be taken for the encouragement of the cultivation of bamboo.

ALEX. MACLEAN.

JAPAN, CHINA AND COREA.

REPORT OF THE TRADE COMMISSIONER.

(Mr. W. T. R. Preston.)

TOKYO, JAPAN, December 24, 1907.

PAPER MAKING IN JAPAN.

The Japanese are among the oldest paper makers in the world. It is not surprising, therefore, that they should have made themselves acquainted with the more expeditious facilities afforded for the manufacture of paper by the aid of western appliances. The expansion of this business in Japan is shown by the phenomenal increase in the import of wood pulp for the manufacture of paper, as may be seen by the following figures:—

1897..	1,433,868 kin.	63,787 yen.
1898..	6,948,497 "	223,599 "
1899..	6,588,197 "	336,651 "
1900..	6,707,118 "	455,130 "
1901..	3,007,994 "	205,590 "
1902..	6,268,937 "	365,058 "
1903..	12,125,560 "	627,139 "
1904..	17,180,298 "	855,579 "
1905..	17,213,481 "	1,047,299 "
1906..	27,987,171 "	1,764,002 "

Germany is credited with more than two-thirds of the entire pulp imports of Japan. But while it appears to be so, by the official records, in point of fact the great bulk actually comes from Norway. The pulp is handled by Hamburg merchants and is carried here in German ships. Formerly the main customer for the pulp carried by German vessels was the United States, which market is said to have been largely exploited by the Canadian manufacturers of pulp, thus replacing the German trade. Since the Hamburg merchants found competition by Canada too keen for them in the United States they directed their attention to the far East, with the results that have been already indicated.

JAPANESE PULP INDUSTRY.

In the early history of the Japanese pulp industry the wood product was used altogether for the manufacture of what is known as foreign papers. But now there is an ever increasing demand for this raw material for the manufacture of Japanese papers. It has been found that by a proper mixture of the wood pulp with the

ingredients usually used for manufacturing Japanese paper, a much cheaper manufactured product is available, and, at the same time, the peculiar fibre of the Japanese paper is not eliminated. From that standpoint it is fair to believe that the demand for wood pulp will increase very largely within the next few years.

On the other hand, it may be said that a combination of prominent paper mills has secured an important pulp wood concession in the northern part of Japan. The manufacture of wood pulp will shortly commence in the district on a large scale, the product being, of course, for use in their own mills. The factories are now approaching completion and are being fitted with all the most improved machinery. It is possible that for a time these circumstances may disturb the market for pulp in the East, but it will only be for a limited period. There are many paper mills that are not interested in the concessions in question, and as they are prepared to enlarge the scope of their operations, an active demand will continue for the supply of foreign wood pulp. The manufacture of paper will expand enormously, keeping pace with other lines of manufacture during the next few years. This fact will naturally have a tendency to steady the market notwithstanding the local production of pulp.

JAPANESE PAPER MILLS, PRODUCTION.

The value of the product of the Japanese paper mills in 1905 was:—

Japanese paper.. . . .	Yen 13,722,000
European paper.. . . .	“ 11,059,000

The import of European paper in 1905 amounted to Yen 6,380,000.

The import duty levied on wood pulp for manufacturing purposes at present is Yen 0.250 per 100 kin, which is equivalent to Yen 0.094 for 100 pounds.

It might be interesting to know that the Japanese manufacture a very good pulp from rice straw, and which is equal to the best chemical wood pulp for the manufacture of European papers. But, unfortunately, the expense attending the manufacture of this pulp makes the product much higher in price than foreign or imported wood pulp referred to. Experiments are being made with a view of reducing the cost of manufacturing the rice straw pulp.

In the Japanese paper mills at the Ehime Prefecture, they are now experimenting with pulp manufactured from waste wheat straw. This product is used in the manufacture of Japanese paper, being mixed in the process with materials known as 'Kozu' and 'Mitumata.' The writer is not aware whether any efforts have been made to utilize the vast waste wheat straw of the western provinces in this way. This appears to open a more profitable field for experiments than the usual way of disposing of straws of the various cereals that are grown in such enormous quantities in western Canada.

In respect to the Japanese market Canada labours under advantages as well as disadvantages. Dealers in wood pulp have informed me that in ordering from Europe, scarcely less than ninety days elapse from the date of the transmission of a cable order to the arrival of the pulp at a Japanese port. As has already been stated, the pulp comes from Scandinavia and is transferred to German ships at Hamburg.

PULP TRANSPORTATION CHARGES.

But while Canada may enjoy a great advantage in point of comparative proximity to the markets of the far East, this is more than overcome by the very cheap cost of transportation from the European ports. Freight charges on pulp from Christiania (Norway) to Yokohama do not exceed thirty shillings (\$7.30) per ton, and sometimes a lower quotation can be secured, while from Hamburg to Yokohama the cost of transportation of pulp varies from twenty shillings (\$4.86) to twenty-five shillings (\$6.08) per ton.

At present the price for pulp at Tokyo as per attached sample is four sen per lb., or Yen eighty per ton of 2,000 lbs.

The plain statements of fact in this report will enable Canadian manufacturers of wood pulp to realize in how far the Eastern market may be available to them now. In considering the question they may rest assured that the demand here for all kinds of pulp will increase enormously in each succeeding year, as Japan will not only be supplying the local demand, but will seek for other markets throughout the entire East, including India as well as China.

W. T. R. PRESTON.

JAMAICA.

REPORT OF COMMERCIAL AGENT.

(*Mr. E. A. H. Haggart.*)

KINGSTON, JAMAICA, December 28, 1907.

STEAMSHIP SERVICE.

A new steamship service, called the Scotia Steamship Company, started to run between Halifax and Jamaica, the first steamer being the SS. *Senator*, from Halifax, which arrived here on November 2. This steamer was followed by the *Amanda*, about a fortnight later, and the *Senator* again made another voyage, after which the line ceased to run, the reason I understand being there was not sufficient trade to support two lines of steamships.

The Halifax and West India Steamship Company still continue to run three steamers, viz. *Beta*, *Boston* and *Kathinka*, scheduled to leave Halifax on the 1st, 11th and 21st of each month, returning to Halifax in similar order. The SS. *Beta* calls, as hitherto, at Bermuda and Turks Island, on the downward and homeward journeys.

CONFERENCE IN BARBADOS.

In connection with this conference, which has been called with a view to improving trade relations between Canada and the West Indies, the government appointed the Hon. W. Fawcett, Director of Public Gardens and Plantations, Mr. J. R. Williams, M.A., Inspector of Schools, and Mr. E. A. Savage, Collector of Customs, Kingston, as delegates from Jamaica, to attend the above conference, and these gentlemen will sail by the R.M.S. *La Plata*, on Friday, January 3, for Barbados.

It is hoped this conference will result in fostering closer and more extensive business between the Dominion and the West India Islands. In this connection, as far as Jamaica is concerned, I hardly think that trade will be enlarged to any considerable extent, until the Canadian manufacturers and producers send representatives here to inquire into the local trade requirements, viz.: The system of credit, the qualities and kinds of goods required, the packages to which importers are accustomed, and other details of a like nature, which go so far to the building up of business.

I can not too strongly urge the desirability of sending suitable and well-informed representatives, such as come here periodically from houses in the United States, by which means they get in touch with their customers and their needs.

E. A. H. HAGGART.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

(Mr. W. A. MacKinnon.)

BRISTOL, December 31, 1907.

NEW SPRAYING FLUIDS.

Experiments which have been made in different parts of England during the last two or three years have now led to the development of two spraying fluids, intended to destroy insect pests and fungus diseases, which attack fruit trees. I recently had an opportunity of examining the results obtained in one or two orchards, and these results have been found on the whole so satisfactory that a series of experimental demonstrations is to be undertaken throughout Canada during the coming year. This work will be conducted under the direction of Mr. W. S. Spark, who lectured most acceptably a few years ago for the Canadian Department of Agriculture, on the subject of horse breeding.

FREE DEMONSTRATIONS.

Mr. Spark represents the manufacturers of the spraying fluids, Messrs. Wm. Cooper & Nephews, of Berkhamsted, England, and I understand that he proposes giving free demonstrations, consisting of a winter application of one fluid, and a spring or summer application of the other, in all the chief fruit-growing centres of Canada. If these experiments are anything like as satisfactory as their projectors anticipate, the result will be a great gain to the fruit industry, assuming that the fluids can be placed upon the market at a reasonable price. In any case the carrying out of experiments on such an elaborate scale is bound to yield a material addition to the knowledge possessed by fruit growers as to the means of fighting insect pests and fungus diseases.

BRITISH PERIODICALS FOR CANADA.

The Postmaster General, Mr. Buxton, recently stated that he was glad to be able to point to the very remarkable success so far of the reduced postage to Canada for newspapers and magazines. The change was made in consequence of the peculiar position, geographical and other, occupied by Canada, as continuous to the United States, the consequence of which was that at the old rate of postage British literature of this description was practically driven out of the market, and did not reach the Canadian reader.

RESULTS OF REDUCED POSTAGE.

The special reduction he had given in the postage, 'intellectual preference' as the Postmaster General of Canada well called it, has resulted in a very large increase in the number of British magazines and newspapers sent to Canada, and what perhaps was most satisfactory was that he was informed by a firm of high-class news agents, which had a large business in Canada, that the increase had been greatest in the case of comparatively expensive magazines of the highest class. Substantially, it might be said, taking last October as a typical month, that the additional number of periodicals per year sent under the new Canadian magazine post might be estimated at between five and six millions.

BROOM HANDLES.

There is a demand here for broom handles made of best basswood or poplar, and good business might be done by Canadian firms exporting these goods to Great Britain. Specifications are as follows:—

Size.—50 in. x $1\frac{1}{8}$ in.; 50 in. x $1\frac{1}{4}$ in.

Approximate price.—13s. per gross; 16s. per gross.

Packing.—144 in case; 72 in case.

One firm states that they could do with 1,000 gross of poplar handles per month, delivered London.

SKEWERS.

There is also a demand for maple skewers for the use of butchers, specifications of which are appended:—

Size.—6 in., 7 in. and 8 in. x $\frac{3}{8}$ in.; $4\frac{1}{2}$ in. x $\frac{3}{8}$ in.

Packing.—20,000 in case; 80,000 in case.

W. A. MacKINNON.

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT.

(*Mr. C. E. Sontum.*)

CHRISTIANIA, NORWAY, GAUBBEGD, No. 4, January 4, 1908.

THE NORWEGIAN TAXATION SYSTEM.

(*From the Norwegian Trade-Paper 'Farmand.'*)

'The municipalities derive their revenue partly from taxes on real property and partly from a tax on income. Within certain limits each municipality has the right to determine how much of its requirements it will draw from each of these sources.

The municipal taxes are as a rule paid to the municipality where the taxpayer lives or where a business concern has its office. The chief exception to this rule is that real estate is liable to taxation in the municipality where it is situated.

As nobody is bound to give any information about his own property or income the incomes of all citizens are annually assessed by municipal boards of assessment for a period of twelve months from September 30. Concerns yielding a varying profit are assessed according to their supposed average income taking one year with another. As incomes are reckoned every gain derived from capital or personal work. Certain percentages of the income are exempted from taxation and it rests with the municipalities to determine within the schedules of the law the amount of these tax-free incomes. The tax on property is also scheduled and must not exceed 2 kr. of each kr. 1,000.

'When the municipal board of assessment has assessed the incomes of the citizens and the municipal council has drawn up its budget for the coming year the actual rate of the income tax to be levied is found by simply dividing the sum of expenditure with the taxable assessed income. There is no maximum rate of income tax fixed by law and as a matter of fact the rate of municipal income tax has reached in many municipalities exceedingly high figures, while the average in the rural municipalities for the period 1895-1904 has been 13·14 per cent, and in the towns 16·92 per cent.

But these rates need not too much alarm those foreigners who either have invested or are thinking of investing money in Norwegian industrial undertakings. The rate is so high not because the taxpayers' money is squandered lavishly, but because, as a rule, the taxable incomes are so small. Where great industrial concerns have been established the percentage of taxation has a tendency to go down in proportion with the growth of the concerns in question. Thus, for instance, the percentage in Mo, North Norway, where the establishments of the Dunderland Iron Ore Company are situated, was lately 6·30 per cent, while at Fauske, the seat of the Sulitjelma Copper Company, the percentage has decreased from 7·80 per cent three years ago to slightly above 4 per cent this year. At Tune, where the Kellner Partington Paper Pulp Company has its mills the rate was lately 7·04 per cent.

THE STATE TAXES.

'The income tax to the State is levied on the basis of the municipal income tax assessments at the rate of 2 per cent for taxable incomes not exceeding kr. 4,000, at 3 per cent on incomes between kr. 4,000 and kr. 7,000, 4 per cent on incomes from kr. 7,000 to kr. 10,000, and 5 per cent on incomes exceeding kr. 10,000. The tax to the State on personal property is $\frac{1}{2}$ pro mille. The State income tax commences at the level of kr. 1,000 annual income; a certain amount of the income is exempt from taxation, varying between kr. 400 and kr. 1,800 according to the number of persons whom the taxpayer has to support.'

TRADE ADDRESS-BOOK FOR ICELAND.

Mr. Sveinn Bjornsson, a lawyer at Reykjavik, Iceland, has recently published a book called 'The Address-Book for Iceland,' containing the names and addresses of all the dealers in Iceland. This being the first book of its kind ever printed, it may be of interest to Canadian exporters.

THE FORESTS OF SWEDEN.

In an official report the yearly gross capacity of production of the Swedish forests is estimated at 34,530,000 cubic metres. But all of this cannot by far be made useful and it is supposed, that over five million cubic metres rot away in the forests, whereby the effective production is reduced to 29,336,000 cubic metres yearly. According to investigations about the uses of raw materials, there is consumed very near 31 million cubic metres per year partly for domestic purposes and partly for export. Compared with the effective production there is thus used more than $1\frac{1}{2}$ million cubic metres above the real capacity of production, a deficit, which might be more than avoided, if the large quantities that rot away in the forests could be utilized. The larger forest owners generally take good care of their properties by employing persons especially educated in forestry, while the contrary in most instances is the case with the smaller forest owners; for this reason it is proposed that through the laws there should be taken measures for the preservation of the forests, and that the government should buy forest grounds to a larger extent than heretofore.

CONSIDERABLE INCREASE IN THE IMPORTS TO NORWAY.

While a statistical statement of the imports to Norway during 1907 is not yet available, the returns from the custom-houses throughout the country show a large increase in the incomes, which are estimated for the year at kr. 42,463,250, or about $2\frac{1}{2}$ million kroner more than in 1906.

C. E. SONTUM.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

*(Mr. J. B. Jackson.)*NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENGL., January 4, 1908.

WOOLLEN RAGS WANTED FROM CANADA.

It should be of interest in many trade circles in Canada to know that very large quantities of woollen rags are imported into the heavy woollen districts of Yorkshire from abroad to be manufactured into mungo and shoddy. At the present time this industry is experiencing a great activity and consequently the consumption of these rags has increased in proportion. Any firms in Canada in a position to collect supplies would therefore do well to make arrangements to send them forward. At various times when the mungo and shoddy manufacturing trade has been taxed with a heavy demand, much difficulty has been experienced in obtaining supplies either from home or from foreign sources. Instances have been known, in fact, where importers have had to resort to advertising for supplies in the French, Russian, and other European newspapers. Almost any kind of either new or woollen rags can be disposed of, no matter what colour or description they may be. As to the price they would obtain, however, this is entirely dependent upon the quality of the material they may have been cut from in the first instance. A sum of as low as £18 and £20 per ton has sometimes been paid at auction, whereas in the case of the very best kind of rags procurable, the price, in some very special instances, has ranged to well over \$500 for the same weight.

THE SHIPMENT OF CANADIAN TURKEYS.

As a direct result of my report of September 27, 1907 (see Monthly Report for September, 1907, page 997), and also of the Trade Inquiries which appeared therein respecting the demand for Canadian turkeys, it is a pleasure to report that a large shipment of these birds was sent to an inland town in this district, arriving just in time to supply the Christmas demand.

In local trade a good deal of interest was taken in this shipment and it should interest exporters in Canada to know the opinions given. 'The birds, it is said, were in perfect condition, but the shippers somewhat spoilt the consignment by freezing them too hard during transit.' This same complaint also applies to a few other shipments which were sent to other parts of the country. It must be remembered that turkeys which arrive in a hard frozen state have to be 'thawed out,' and this takes the fresh look off them—not to mention other drawbacks that result from this process. Notwithstanding this, however, the turkeys that came to hand fetched a price of from 16 to 17 cents per pound, but it is said that if they had only been chilled (as Canadian turkeys usually are) instead of frozen, they would have fetched 2 cents per pound more. As regards the packing too, in this special case the birds were packed in random numbers to a box, such as twelve, eight, fifteen and sixteen, but, in future, it is advocated that no more nor less than twelve birds be put into a case, and that they be graded as to weight.

Taken altogether, however, the shipment was a good one, and, as before mentioned, created no small interest; in fact, now that the preliminary trial of this direct trade between exporter and merchant has met with fair success there is every indication that several other firms will be asking for direct shipments next season, and it rests with Canadian exporters to make the most of their opportunities in this direction.

READY DEMAND FOR CANADIAN SALMON.

According to well-informed reports the supplies of British salmon this season are likely to be below the average. Merchants and importers in this district are eagerly looking for supplies from Canada, it being immaterial whether the fish arrives frozen or fresh. 'Loggerheads' are considered to be by far the favourite brand obtainable from Canada; in fact, many dealers here prefer them even to English salmon. I am assured that this and other kinds of salmon, such as 'Sockeyes,' &c., would fetch as much as 16 to 17 cents per pound if sent forward at the present time.

CANADIAN-MADE CORDAGE IN DEMAND.

It is gratifying to know that during the past month or two a few shipments of Canadian-made ropes and twines have been sent to local buyers, especially to marine goods dealers in the northeast coast ports of England. Some manufacturers appear to have been active in encouraging this trade, and given reasonable prices, almost any kind of cordage such as 2, 3 and 4-ply cords, sisal ropes, marine cords, &c., should meet with a good demand in this district. The prices recently quoted by Canadian manufacturers were slightly lower than those charged by manufacturers in this country for the same class of goods. It should always be borne in mind, however, that samples are an indispensable precedent to business when quoting prices.

CANADIAN VERSUS ITALIAN ASBESTOS.

I am credibly informed that one or two asbestos-goods manufacturing firms in this country are making increased efforts to develop the demand for Italian asbestos and it is up to Canadian exporters to similarly put forth renewed efforts to maintain their trade with buyers in this country. Various opinions are given as to the relative merits of Canadian and Italian asbestos. On behalf of the latter it is said to have a longer fibre, and it is also credited with being a little more silky. As one dealer remarks:—'It attracts the eye.' Canadian asbestos, however, is generally admitted to be of a much more durable nature; in fact, among the majority of users it is looked upon as having no equal for industrial purposes.

JOHN B. JACKSON.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., January 6, 1908.

ROAD-MAKING.

Following my reports on the subject of road-making, I think the following extracts from a special article by Colonel R. E. Crompton, C.B., R.E., in the *Times Engineering Supplement*, will be of interest to Canadian municipalities:—

'The main principles of road construction still continue to be those laid down by McAdam. A suitable foundation, the depth and strength of which varies with the nature of the subsoil, is covered with a layer of hard stone broken into angularly-shaped pieces, and these are either consolidated into a smooth surface by the passage of the traffic itself, or are rolled down by steam rollers. In the days of McAdam the work of making or repairing a road was usually carried out so that this consolidation could take place during the wetter seasons of the year, but, owing to the almost

universal use of steam rollers, roads are now made and repaired at all seasons. At the time that the roller is passed over the coating of metal the process of consolidation is helped by putting on a coating of sand, gravel, or similar material, technically called "blinding" or "hogging," and the whole is drenched with water and consolidated by the roller whilst still wet. A road thus constructed depends on being held together by the small particles derived from the "hogging," and these are practically cemented into place by dried mud.

'Some years ago it became evident to road surveyors that something more efficient than water must be used as the binding material. The success of asphalt and of certain tarred footpaths pointed to the use of tar. The county surveyor of Nottinghamshire first carried out the practical experiment of saturating with tar from the gasworks the road metal, formed of blast furnace slag. This tar-saturated material was rolled down in the usual way and was found to offer great advantages, as with such a road less mud was formed in winter and less dust in summer.

'Many minds worked in the same direction, but for a long time the experiments were isolated. Local road surveyors persuaded their boards to allow them to make short lengths of this improved road surface. The results obtained were various. In some cases the tar remained soft, adhering to the wheels of the vehicles. The experiments being on a small scale were costly, but thanks to the public outcry caused by the dust-raising of modern motor traffic, it became imperative that the results of these isolated experiments in various parts of the country should be collated and that the whole question of road construction should be considered by some central authority.'

THE ROADS IMPROVEMENT ASSOCIATION.

'Under the auspices of the Roads Improvement Association meetings between the road makers and the road users have been held. Competitions directed to show the best machinery for treating the roads with tar and the best preparations of tar to be used for the purpose have taken place. Valuable prizes have been competed for and awarded, and the public are beginning to see the results in the long lengths of tar-treated roads. The recent developments of using tar in road construction have been along two distinct lines. First, that of saturating the surface of existing roads with suitable tar compounds by tar-spraying machinery. The experience obtained in treating a great mileage of roads in Kent, Middlesex, Surrey, and other home counties has shown that the cost of obtaining a very satisfactory surface which will last for one summer season is not in excess of the annual cost of watering the same length of road; and in addition to which it is probable that the wear of the road for the same period has been reduced, so that some saving will be effected in maintenance.

'The second and more complete method of treatment is that the road when repaired, should be made up throughout the whole depth of its metalling with road metal saturated with tar. Considerable lengths of the Thames embankment have been remade in this manner, and every one can judge for themselves that the result, on the whole, has been highly satisfactory. For the first time since the embankment was completed as a thoroughfare has the road been maintained for any length of time in a reasonably smooth and satisfactory condition.

'The latest development of this road treatment, which seems to yield financially very satisfactory results, has been introduced by Mr. Gladwell, the engineer and surveyor to the Eton and Slough Rural District Council, who last year tried the experiment of laying a cushion of fine tar topping, similar to that which had been previously used upon footpaths, upon the foundation of a road from which the upper layer of road metal had been removed ready for the usual repairing process. Mr. Gladwell then laid the new metal on the surface of this topping and rolled it down into it, so that the fine tar topping or "matrix," as it should be called, gradually came up to the surface. Since that time the process has been further developed, and roads have been completed for the Staines Rural Council which seem to be exceed-

ingly perfect; and the cost has been only 2½d. (5 cents) per superficial yard greater than the cost would have been if the repairs had been carried out in the usual manner by laying on and rolling down a coating of granite. The actual figures reported by the surveyor to the above council were that whereas the ordinary repair would cost 1s. 6½d. (37 cents) per square yard, the improved tar-treated coating just described cost 1s. 9d. (42 cents) per yard.'

ELECTRICALLY-OPERATED FIRE ESCAPES.

A matter which has created considerable interest in fire escapes here is a new electrically-propelled fire escape which has just been added to the equipment of the Liverpool Fire Brigade supplied by Messrs. Henry Simonis & Co., London.

The power for propelling and operating the escape is obtained from storage batteries located at the front of the vehicle. It has a speed capacity of 18 to 20 miles an hour, and the ladder can be extended to its extreme length of 87 feet in about half a minute. The ladder can be turned in any direction and laid to any angle. When extended perpendicularly it will carry four firemen with two lines of hose, the men being situated at the top of each of the four sections. Catches lock the apparatus in any desired position, and the automatic principle is employed throughout. The tests given have very fully satisfied the authorities.

P. B. BAILL.

ST. KITTS, NEVIS AND VIRGIN ISLANDS.

REPORT OF COMMERCIAL AGENT.

(*Mr. S. L. Horsford.*)

ST. KITTS, January 8, 1908.

SUGAR CROP.

The sugar crop for the season just closed, was a fairly good one, and the bulk found its way to Canadian markets. Owing to favourable conditions in the United Kingdom, about 2,797 tons were shipped to Greenock and London, while for the first time in the shipments to Canada, a new departure was made by 433 tons being forwarded to Montreal, instead of all being consigned as heretofore, to Halifax.

The total sugar exported for the year amounted to 14,177 tons, of which Canada received 11,188, the United Kingdom 2,797, and other places 192 tons.

MOLASSES CROP.

The molasses crop was again disappointing, the output being smaller in proportion to the quantity of sugar made than is the case in other islands. Of the 2,157 puncheons shipped, 1,263 were forwarded to Canada, and 894 elsewhere. In regard to this article also, there has been a change in the method of disposal, as while in former years the greater portion of the crop was sold locally at fixed prices on definite orders from Canadian buyers, this season, owing to the absence of such orders, the bulk was shipped on consignment.

COTTON.

The output of cotton from this island, Nevis and Anguilla during last season, showed a gratifying increase on the previous year's production, and this without any appreciable diminution in the acreage under cane cultivation, at least in St. Kitts, and as prices were fairly good, the results have proved of substantial benefit to the planters. The quantity reaped was:—

	Bales.	Lbs.
At St. Kitts..	815	269,109
Nevis..	544	136,670
Anguilla..	297	59,666

All being shipped to the United Kingdom.

Owing to the unfavourable weather conditions, the rains having come late, the prospects for 1908 crop are by no means as good as they were at this time last year, and we can hardly therefore look for more than an average return of sugar, but the early reapings of cotton are reported to be most satisfactory, and the total output will probably exceed that of 1907.

IMPORTS FROM CANADA.

With regard to imports from Canada, the official statistics for 1907 are not yet available, and I am therefore unable to make any comparison with previous years, but unless the system of preparing these returns is improved on it will be impossible to ascertain accurately what our real trade with the Dominion is.

As has frequently been pointed out, a great many articles of Canadian manufacture are shipped through United States ports, and as the customs regulations here do not demand any evidence as to the place of origin, these goods are invariably included in the official returns along with the imports from the United States. A similar condition prevails in regard to goods of Canadian make which are held in stock in bond at United States ports and shipped thence to the islands. These come in, in same way, to be included as American goods.

But there is, notwithstanding, evidence of a very marked increase in the demand for Canadian goods which is growing every day, and on all sides are seen goods of Canadian make where formerly only American were known. This is apparent in items such as rope, wrapping paper, biscuits, nails, cheese, butter and the like, but the list is an increasing one all the time, and what is more, the goods have apparently come to stay. There has also been a decided turn in regard to Canadian flour, which a short while ago no one would touch on the plea of its not keeping in our climate.

Owing, however, to the advance in wheat a few months ago and the consequent rise in the price of American flour, a good many of our dealers were forced to turn their attention to the formerly despised Canadian brands, with such satisfactory results that repeat orders were in many cases given, and while the prejudice still exists to some extent, and trade is consequently very limited, I hear little of the old complaint that it cannot keep.

S. L. HORSFORD.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER,

(*Mr. E. D. Arnaud.*)

GAZETTE BUILDING, ST. JOHN'S, January 12, 1908.

HERRING FISHERY.

The winter herring fishery season on the west coast at Bay of Islands was brought to a close on 6th instant, and according to the Inspector of the Customs Protection Service of Newfoundland, the results are as follows:—

Fifty-seven American vessels took away—

	Brls.	Valued at
Salt bulk herring.. . . .	53,894	\$107,788
Frozen herring.. . . .	38,120	84,360
Pickled herring.. . . .	14,876	59,504
	<u>106,890</u>	<u>251,652</u>

Thirty-two British vessels took away—

	Brls.	Valued at
Salt bulk herring.. . . .	12,424	\$34,848
Frozen herring.. . . .	12,710	38,130
Pickled herring.. . . .	10,616	43,464
	<u>35,750</u>	<u>105,442</u>

making a total export of 142,640 brls., valued at \$357,094.

The number of men employed is given as 2,156, of whom 538 were engaged on American vessels, and 192 upon Canadian vessels.

HERRING EXPORTED.

Comparative statement of the quantities of herring exported from Bay of Islands during the seasons of 1904, 1905, 1906 and 1907:—

SEASON 1904.—Eleven British vessels took cargoes. Sixty-seven American vessels took cargoes.

Bulk.	Fresh.	Frozen.	Pickled.	Value.
3,750	23	2,357	10,678	\$ 43,256
60,960	3	19,690	8,054	143,581
64,710	26	21,957	18,732	\$185,837

SEASON 1905.—Thirty-nine British vessels took cargoes. Forty-three American vessels took cargoes.

Bulk.	Pickled.	Frozen.	Value.
19,233	6,408	13,230	\$69,712
24,900	1,980	19,900	74,763
44,123	8,388	33,130	\$144,474

SEASON 1906.—Forty-one British vessels took cargoes. Sixty-five American vessels took cargoes.

Bulk.	Pickled.	Frozen.	Value.
24,005	10,983	10,900	\$183,548
47,957	4,132	18,260	368,596
71,962	15,114	39,160	\$453,144

SEASON 1907.—Thirty-two British vessels took cargoes. Fifty-seven American vessels took cargoes.

Bulk.	Pickled.	Frozen.	Value.
12,424	10,616	12,710	\$105,442
53,894	14,876	38,120	251,652
66,318	25,492	50,830	\$357,094

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(Mr. D. H. Ross.)

STOCK EXCHANGE BUILDING,
MELBOURNE, December 23, 1907.

AUSTRALIAN CUSTOMS TARIFF OF 1907.

The debate upon the new Customs tariff was concluded in the Commonwealth House of Representatives on December 14. The uncertainty that existed for some months in respect to the rates of duty on many lines of imported goods dislocated trade to a great extent. Landed costs are now carefully computed before orders are placed. Local quotations have been readjusted to suit the altered conditions. Some amendments in the duties may yet be made by the Senate which meets on January 22 to ratify the tariff. The termination of the tariff debate came earlier than anticipated and was viewed with satisfaction in commercial circles from the point of comparative finality. After the ratification of the tariff by the Senate, the Australian Government has given an intimation to the effect that the proposed preferential trade agreements with Canada and New Zealand will be submitted to Parliament. The House of Representatives will be in recess until March 11, 1908, so that in the meantime negotiations will be resumed.

MODIFIED AUSTRALIAN CUSTOMS DUTIES.

The Department of Trade and Commerce, Ottawa, was promptly advised by cable of modifications and reductions in the Australian Customs duties—of special interest to Canadian exporters—made during the progress of the Parliamentary debates. In a great many instances the specific or fixed duties were abolished and strictly *ad valorem* rates are now enforced. Orders held in abeyance for some leading lines of Canadian goods, pending alteration of duties, were immediately confirmed by cable. Extensive clearances of huge stocks held in bonded stores have also been effected this month.

AMENDED DUTIES ON AGRICULTURAL IMPLEMENTS AND MACHINERY.

In several instances the duties upon farming machinery have been reduced by the House of Representatives. In the schedule submitted herewith there is no preference upon the manufactures of the United Kingdom. The following duties are now in operation under the amended tariff rates:—

	General Tariff.
Harvesters.	£12 each.
Strippers.	6 each.
Harvester parts.	1½d per lb.
Drills.	25 per cent.
Cultivators (disc).	25 “
Cultivators (other).	29 “
Harrows.	20 “
Scufflers.	20 “
Ploughs (stump jump).	25 “
Ploughs (other).	20 “
Disc for ploughs and harrows.	25 “
Swingle trees and neckyokes (when separate).	25 “
Poles and seats.	25 “

DUTY FREE AGRICULTURAL IMPLEMENTS, &C.

The following list comprises the principal lines of farming implements and machinery which are duty-free under the 1907 Australian Customs Tariff as amended to date. Several items made dutiable in the original tariff have been placed on the free list:—Mowers, hand-worked rakes; ploughs combined; hay tedders; horse rakes; lucerne bunchers; maize harvesters; maize binders; milking machines; mouldboard plates in the rough and not cut into shape; potato raisers or diggers; potato sorters; root cutters, pulpers and graters; straw stackers; sub-surface packers; threshing machines; winnower forks (wood and steel); hand-worked cultivators and cream separators.

HORTICULTURAL AND VITICULTURAL MACHINERY, &C.

The extent to which an Australian preference is given upon comparatively unimportant lines of horticultural—and other—implements made in the United Kingdom is $2\frac{1}{2}$ per cent. The general tariff is 15 per cent and the United Kingdom preferential duty is $12\frac{1}{2}$ per cent upon the items scheduled as follows:—Cane loaders on wheels; channel-making graders; garden and field spraying machines; garden and field rollers; garden hose reels; garden syringes; horse road rollers and machines; lawn mowers, sweepers and sprinklers; road making ploughs; road scoops and scrapers, scoops stump extractors; agricultural, horticultural and viticultural machinery not specially enumerated.

AUSTRALIAN DUTIES ON BICYCLES, MOTOR CARS, VEHICLES, &C.

One of the most important modifications of the 1907 Australian tariff has been the withdrawal of the specific—or fixed—duties upon bicycles, buggies, dogcarts, wagonettes and carriage parts. Through an oversight, the duty upon complete motor cars, as revised on December 11, has not been clearly defined in the tariff. On making inquiries at the Department of Trade and Customs, I was informed that the duty upon complete motor cars had been fixed at 35 per cent in the general and 30 per cent in the United Kingdom preferential tariff. Canadian exporters of motor cars will require to ship the 'bodies' separately, this line (the least expensive part of the car) being dutiable at 35 per cent. The chassis and one set of tyres will also be shipped separately so as to benefit by the minimum duty under the general tariff of 5 per cent. The assembling of the various parts of the cars will be carried out after arrival by local mechanics. This section is most important to Canadian manufacturers and the rates now in operation upon the articles enumerated are as follows:—

	General Tariff.	Preferential Tariff. U. K. Goods.
Bicycles.	30 per cent.	25 per cent.
Motor cycles.	30 "	25 "
Cycle parts.	15 "	10 "
Cycle parts, n.e.i.	5 "	Free.
Vehicles, buggies, dogcarts, &c.	35 "	30 "
Vehicles, wagons, wagonettes, &c.	35 "	30 "
Carriage wheels, bodies, springs, axles, &c.	35 "	30 "
Motor cars—complete.	35 "	30 "
Motor car bodies.	35 "	25 "
Motor car chassis and I. R. tyres for one car.	5 "	Free.
Pianos.	30 "	25 "
Organs.	20 "	20 "

REDUCTION IN DUTIES ON IMPORTANT CANADIAN EXPORTS.

Some striking reductions have been made in the 1907 Australian Customs duties from those originally introduced on the items of chairs, cotton piece goods including Denims and Dungaree, 'news' paper, pulp and leather. To a lesser extent the rates upon furniture and apparel have been lowered. The following duties are now imposed—many items being of special interest to Canadian firms exporting to Australia:—

	General Tariff.	Preferential Tariff. U. K. Goods.
Apparel and attire—wool or silk. . . .	40 per cent.	35 per cent.
Apparel and attire, n.e.i.	35 "	30 "
Apparel and attire, sundries.	30 "	25 "
Cotton piece goods, n.e.i.	5 "	Free.
Denims and dungaree.	5 "	Free.
Furniture.	35 "	25 "
Chairs.	35 "	25 "
Wire doors and screens.	35 "	30 "
Doors of wood 1½ in and over. . . .	7/6 each.	7/6 each.
Doors of wood over 1½-in.	5/- "	5/- "
Doors of wood 1½-in and under. . . .	3/6 "	3/6 "
Boots, shoes and slippers.	35 per cent.	30 per cent.
Goloshes, rubber sand shoes.	25 "	20 "
Rubber wading boots.	5 "	Free.
Rubber and other hose.	25 "	20 "
Rubber mfrs., n.e.i.	25 "	20 "
Belting I. R. and leather.	25 "	20 "
Leather, kid, patent and enamelled..	20 "	20 "
Paper 'news' in rolls or folios.	Free.	Free.
Paper 'wall'	20 "	15 "
Paper strawboard.	1/6 cwt.	1/6 cwt.
Paper bags.	8/- "	7/6 "
Paper, coloured parcel and bag. . . .	5/- "	4/6 "
Pulp (for paper).	Free.	Free.

ALTERATION IN SOME LUMBER DUTIES.

The most noticeable alterations in the duties on lumber are the reductions in item (A) from 1/6 to 6d., and the new item (B) of New Zealand pine—undressed—of all sizes to 6d. (in each case) per 100 superficial feet. Unfortunately Canadian spruce is practically placed outside competition with the duties imposed thereon, viz.:—Sizes under 12 x 6-in. (or equivalent) at 2/-, and sizes under 7 x 2½-in. (or equivalent) at 2/6 per 100 superficial feet—against white pine from New Zealand and Manchurian pine which is imported in logs (duty free) and cut in Australian saw mills. Spruce cannot be imported in logs and this fact has several times been brought under the notice of the Customs authorities by this office and by importers. With the exception of a 5 per cent preference on picture and room mouldings (i.e. from the United Kingdom 25 per cent) the timber schedule gives no advantages to Great Britain. The duties now imposed are:—

- (A) Timber, undressed, n.e.i., in sizes of 12 in. x 6 in. (or its equivalent) and over.per 100 super. feet 6d.
- (B) New Zealand Pine, undressed, of all sizes
per 100 super. feet 6d.
- (C) Timber, undressed, n.e.i., in sizes of 7 in. x 2½ in. (or its equivalent) and upwards, and less than 12 in. x 6 in. (or its equivalent).per 100 super. feet 2s.

(D) Timber, undressed, n.e.i., in sizes less than 7 in. x 2½ (or its equivalent); including door stocks per 100 super. feet	2s. 6d.
(E) Timber, dressed, n.e.i. per 100 super. feet	3s.
(F) Architraves, Mouldings n.e.i., and Skirtings, of any material. per 100 lineal feet	5s.
(G) Shingles. per 1,000	3s.
(H) Pickets, undressed. per 100	2s. 6d.
(I) Pickets, dressed. per 100	6s.
(J) Laths. per 1,000	7s. 6d.
(K) Laths for Blinds. ad val.	25 per cent.
(L) Spokes, dressed or prepared (not being of hickory), 2 in. or under in diameter. per 100	10s.
(M) Palings. per 1,000	15s.
(N) Prepared Hubs (not of elm). each	1s.
(O) Rims, n.e.i. each	1s. 3d.
(P) Staves, dressed or partly dressed, but not shaped per 100	2s. 6d.
(Q) Three-ply Veneer. per 100 super. feet	5s.
(R) Veneers, n.e.i. per 100 super. feet	3s.
(S) Timber, for making boxes or doors, being cut into shape, and dressed or partly dressed. . . per 100 feet super. face	2s. 6d.
(T) Picture and Room Mouldings. ad val.	30 per cent.
(U) Broom Stocks. ad val.	20 per cent.
(V) Timber, bent or cut into shape, dressed or partly dressed, n.e.i. ad val.	25 per cent.

THE AUSTRALIAN DRIED FRUITS INDUSTRY.

Quite recently dried fruit grown at Renmark, South Australia, was awarded first place at the Royal Horticultural Society's exhibition in London against competition from the world. The production of lexia and sultana raisins is estimated in the 1908 season to exceed the Australian consumption by over 2,300 tons and within three years, under normal conditions, the Commonwealth requirements of some 6,000 tons of currants will be filled by locally grown fruit. Over 8,000 persons are now dependent upon the industry for a livelihood. In 1907 some 250 tons of Australian dried fruit—chiefly lexias—found a market in Canada and for the coming year special efforts are being made to largely increase the results achieved during the period of the initiation of the business. Export prices will be made available in February and Canadian fruit importers have been supplied with samples of Mildura (Victoria) and Renmark fruits and all details necessary to facilitate orders being placed at a maximum speed and minimum cost. Already representations have been made to the Commonwealth government by fruit packers with the view of placing the item of dried fruit on the Australian schedule in the proposed reciprocal trade agreement with Canada.

SHIPMENT OF TURKEYS FOR SOUTH AFRICA.

During the last few weeks over 1,000 boxes turkeys (four birds in each box) have been shipped to South Africa from the Government cool stores, Melbourne, on behalf of shippers. Space has been engaged in nearly every steamer for Africa for some weeks ahead for consignments of this class of produce, the demand being more than usually active.

SHIPMENT OF TURKEYS FOR LONDON.

A consignment of frozen turkeys was exported from Melbourne by mail steamer to London early in November, the object being to land the goods there in time for the Christmas trade, which opens about the middle of December. The shipment consists

of what are known in the trade as 'heavy birds' that is, each carcass weighed 15 lbs. or over dead-weight. The average will probably be about 17 lbs. or 18 lbs., and the landed cost in London will be approximately £1 4s. 0d. per couple. The price in Melbourne was 6d. per lb. live weight and the birds were specially selected to test the market for heavy gobblers of prime quality, the idea being that goods of this class would command top prices, notwithstanding the fact that poultry-breeders in both Europe and America make a practice of forwarding every year large consignments to London to meet the Christmas demand.

AUSTRALIAN WHEAT AND FLOUR.

When the last Vancouver mail left Melbourne (November 25th) f.a.q. wheat was quoted at 4s. 8d. (\$1.13) per bushel f.o.b. principal Australian ports. In the interval prices declined to about 4s. (97 cents) and the mail closes with wheat at 4s. 4½d. to 4s. 5d. (say \$1.07) for export. Flour has advanced by 10s. per ton during the last fortnight and to-day's rates are £9 5s. 0d. to £9 10s. 0d. (say \$45.00 to \$46.23) per ton, depending upon brand and quantity purchased. The volume of export business in new wheat has been rather restricted, but the market is now firm. It is anticipated that throughout Australia the crop harvested will considerably exceed the estimates which, a month ago, gave a surplus of about 10,000,000 bushels for oversea shipments.

AUSTRALIAN WOOL.

The unsettled state of the wool market has induced the principal sellers to abstain from holding further sales in either Melbourne or Sydney until January 20th. Unusually large quantities of wool have already been sold in Australian markets this season and this is considered to have placed a severe strain upon the financial arrangements of buyers in view of the monetary position in the chief consuming countries. Notwithstanding these conditions the demand for choice merino wools, notably those suitable for America, remains firm. The closing sales for the year show a depreciation in values of medium and faulty wools.

ADVERTISING AUSTRALIA.

It is considered impossible for the Commonwealth to initiate a comprehensive scheme of advertising Australia in Europe until after the High Commissioner is appointed (probably) next year. A fine display map is, however, now being prepared and when completed will be exhibited on the hoardings of the principal cities and towns in Great Britain with the object of proving a striking advertisement of Australia. The major portion of the sheet is designed to show the immense area of the Commonwealth in comparison with that of Europe. All the countries of Europe—except Russia—will be seen on the map inside Australian territory. The balance of the sheet will doubtless be devoted to facts and figures with the object of attracting emigrants to Australian shores. The Prime Minister of Australia stated in a recent speech that if properly supported by the States—which hold all the Crown lands—the Commonwealth Government was prepared to ask Parliament to increase the present advertising vote of £20,000 to £200,000 per annum.

PROSPECTS FOR 1908—TASMANIAN APPLE SEASON.

From reliable information received from Hobart, the estimated shipments of apples from Tasmania will in round figures exceed 500,000 cases in 1908. The crop promises to be a fair one in all varieties except 'Scarlets,' which, for the third year in succession, have set in light. As 'Scarlets' comprise a large percentage of Tasmanian apples a light crop in this variety makes a considerable shortage in the total yield for the season.

CANADIAN TRADE NOTES.

Since the Australian customs duties have been practically settled trade has revived considerably throughout these states, and, as a consequence, orders held in abeyance for some leading lines of Canadian exports have been confirmed by cable. Indents are being sent from Melbourne to Canada by this mail for heavy lines such as tubing and pipe in addition to some lines of general hardware. Some furniture, desk, and washing machine orders have also been placed. Repeat business is being done in carbon paper and typewriter ribbons of Ontario manufacture. The 'Daisy' brand of Nova Scotian lobsters has been so well introduced, and the quality being so far superior to anything heretofore sold, this line now commands the bulk of the Australian business.

Recent shipments of Toronto glazed kid are reported to be satisfactory and regular business—under reduced duties—is looked for. While some lines of Canadian goods and products are bound to feel the effect of increased customs duties, yet Australia must continue to import largely the goods for which the country has no special manufacturing or natural advantage. Despite a temporary set back, the Australian outlook for 1908 is distinctly hopeful for Canadian exporters, and especially so when there are promising indications that a reciprocal trade agreement between the two countries will be consummated shortly after the Commonwealth parliament meets in March next.

D. H. ROSS.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. MacNamara.*)

CANADA CHAMBERS, 36 SPRING GARDENS,
MANCHESTER, ENG., January 15, 1908.

MICA.

The British Trade and Navigation Returns do not specify the quantity of mica imported into Great Britain, and it is no doubt merged with other products of the mine. At the present time, it is not a very large trade, but it is a growing and important one, and in the near future will assume large proportions. India has been the chief source of supply until Canada developed her mines, and to-day the excellence of the Canadian article has interested the trade almost to the exclusion of the Indian product. Some of the very best brokerage houses are now seeking to represent any important Canadian mines for the purpose of controlling their export trade, and I might be permitted to say that the sale by reasonable brokers is best suited for this and continental markets. The price it commands largely depends upon the size of the sheets and freedom from blemishes, and no one in the trade would venture an opinion as to value without seeing samples, but without which, the price is said to range from 2d. per lb. to 6s. per lb. The soft Canadian amber mica is as good as can be bought, and is superior to the best white Indian, but the price of the former is said to be very high. It will be necessary for the mine owner who seeks this market to state the sizes shipped in, whether thumb trimmed or knife trimmed and the price c.i.f. Manchester shipped in cases containing 1 cwt. to 2 cwt.

CHEESE.

One of the largest wholesale produce houses of this city states that the prospects at this moment are for higher prices, in view of the fact that Canada will close the season with about 350,000 boxes short, which in itself must have a great influence in forcing up the price on this side; although the average weekly consumption is not so great as last year yet it is above the average of late years, being about 48,000 boxes per week.

The price 62s. to 65s. rules about the same as last year, but it is expected to reach 67s. in February. Customers throughout the country now realize that the shortage is genuine, and are turning their attention to same by buying forward to the extent of a few weeks supply, whereas all through the season the buying has been from day to day.

What the prospects for the coming season will be is too early to predict, but it is to be hoped that the spirit of speculation and cornering of this food product will not be manipulated by just a select few to the great disadvantage of the whole trade. They are pleased to report that the quality of the goods sent has been fairly good and that the shipping of green cheese has been conspicuous by its absence, which has done much to keep the good name of Canadian cheese well to the fore in this great market.

VALUABLE SCIENTIFIC DISCOVERY.

The New Year opens with an announcement that will in all probability have far-reaching effects on farm and garden practice in the near future. Professor Bottomley, of King's College, London, has succeeded in extending, by inoculation, the power of absorbing atmospheric nitrogen, and fixing it to plants other than the legumes. Although some such discovery was expected, the advance made is one of first-class importance in the history of the application of science to agriculture. The exhaustive soil investigations which have been carried out for so many years by the United States Department of Agriculture—investigations which took a new turn when the functions of bacteria came to be better understood—leave little doubt that Nature is able, and does fix atmospheric nitrogen in the soil by other means than that of the leguminosae, but whether this power was through soil functions or other plants was a problem.

Professor Bottomley has succeeded in inoculating tomatoes, cereals, cabbages, strawberries, and roses with the root nodules which collect and fix the atmospheric nitrogen. Further, he has succeeded in doing this in the field as well as the laboratory, and in each case with beneficial cultural results. He has demonstrated that other cultivated plants than the legumes (and the four trees on whose roots these nodules are said to have been once or twice found) have, or can be made to have, the power of fixing nitrogen from the air for the future food of plants.

This cannot but put a further important power in the hands of both farmers and gardeners, although it may as yet be too early to say exactly how it will be ultimately applied commercially and practically. In any case, 1908 opens with a very notable and welcome advance in agricultural science.

BRITISH TRADE RETURNS.

According to the Board of Trade returns issued recently, the imports in December, 1907, amounted to £56,022,396 being an increase of £1,330,894 compared with December, 1906. The imports for the whole of 1907 amounted to £645,904,176, being an increase over 1906 of £38,015,676. The exports for December, 1907, totalled £32,741,736, an increase over December, 1906, of £1,332,561. The exports for the whole year totalled £426,204,596, being an increase over 1906, of £50,629,258.

P. B. MacNAMARA.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, January 17, 1908.

NEWFOUNDLAND CUSTOMS RETURNS.

The Customs Returns of Newfoundland for the year ended 30th June, 1907, have now been published, and it will be of interest to Canadian exporters to ascertain from the details given below, the position that Canada holds in comparison with Great Britain and the United States. There was an increase of \$147,159 in the total of the imports from Canada during the year, while those from the United States decreased \$191,833 during the same period.

E. D. ARNAUD.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

(Mr. Alexander MacLean.)

ROOM B, 14 BUND, YOKOHAMA, December 30, 1907.

MONTHLY RETURNS OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the monthly returns for the eleven months ending November 30, of the present and the previous year:—

EXPORTS TO CANADA.

	1907.	1906.
Silk, raw.	\$ 15,378	\$165,472
Silk tissues	182,961	283,505
Silk handkerchiefs	90,511	138,071
Mats and mattings (Hanagoza).	49,816	38,001
Cotton tissues.	3,854	4,531
Porcelain and earthenware.	97,974	88,062
Lacquered ware.	8,840	9,439
Tea.	590,525	400,935
Rice.	225,122	121,003
Sake.	31,004	13,596
Straw plait and chip braid	549	2,582
Camphor.	3,118	6,623

IMPORTS FROM CANADA.

Flour, wheat.	123,203	\$70,499
-----------------------	---------	----------

The principal items given in the monthly return number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items making up the aggregate of trade the annual return has to be awaited.

Total Export for eleven months ending November 30, of the present and the previous year:—	Total Import for eleven months ending November 30, of the present and the previous year:—
1906. \$189,955,334	1906. \$193,435,110
1907. 200,254,864	1907. 227,432,799

GENERAL TRADE RETURNS.

For the eleven months ending November 30, of the present and the previous year:—

	1907.	1906.
Flour, wheat.	\$2,926,414	\$3,820,398
Butter.	48,613	84,226
Salted salmon.	174,836	750,005
Condensed milk.	921,267	680,987
Fertilizers (artificial).	11,450,118	8,969,241
Leather (sole).	1,040,603	521,790
Lead, pig, ingot and slab	366,821	670,151

	1907.	1906.
Printing paper.	\$1,628,468	\$ 993,632
Cotton ducks.	49,605	51,572
Cotton prints.	1,213,200	1,203,512
Cotton stains and Italians	957,387	1,032,612
White shirtings.	580,225	610,202
Grey shirtings.	3,366,071	3,702,721
Pulp (sulphite).	798,095	846,365
Horses.	115,780	14,297
Horn cattle.	177,795	65,436
Wheat.	1,354,653	657,678
Cheese.	12,039	14,348
Whiskey in bottles.	71,097	163,830
Whiskey in casks.	9,294	
Tallow beef	196,103	135,463
Nails (iron).	1,660,109	1,192,178
Nickel.	143,677	288,441
Mechanics tools and agricultural im- plements.	279,554	444,567
Musical instruments.	46,703	85,979
Sewing machines.	369,803	228,949
Lumber (pine boards)	158,557	24,115
Timber (round and square)	340,920	144,999
Portland cement.	621,493	4,333
Asbestos, boards or sheets.	20,914	

ALEX. MACLEAN.

CITY TRADE BRANCH.

REPORT BY CANADIAN REPRESENTATIVE.

(Mr. Harrison Watson.)

73 BASINGHALL STREET,

LONDON, E.C., ENG., December 13, 1907.

MANUFACTURERS OF WOOD WANTED.

We have again received several applications from United Kingdom houses seeking supplies of manufactures of wood of one kind or another. Making due allowance for the inevitable divergence of views held by buyers and sellers, it is apparent that for some time past the prices asked by Canadian manufacturers have been altogether out of proportion to those current in other sources of supply. This has been doubtlessly due to the heavy demand which has existed in the home market, and which has enabled manufacturers to obtain exceptionally high prices for their output.

If Canadians are to successfully compete in other markets, they must be prepared to reduce their quotations because although buyers on this side are apt to suggest prices which are considerably lower than they are ultimately willing to pay, there is no likelihood of their acceding to the somewhat extravagant ideas which, we are informed, are held by some of the Canadian shippers.

MAPLE LAST BLOCKS.

A Midlands company which manufactures boots and shoe machinery and appliances, including lasts, informed us that although they have in the past been obtaining supplies of their maple last blocks from the United States, they saw no reason why Canada should not be able to supply their requirements, and that they would welcome business from that quarter. As I have been able to obtain some particulars which are of importance to any Canadian firm wishing to take up the matter, I reproduce these details which are as follows:—

These blocks require to be kiln dried, and are purchased by the 'car load.' The prices charged for the last shipment were:—

	Per 1,000.
Size 1..	\$33.00
Size 3	41.00
Size 5..	45.00
Size 7..	48.00
Size 9..	51.00

The above prices were f.o.b. United States port.

WOOD FLOUR.

In continuation of the inquiries which I have been making and which were referred to in my last report, I communicated with two leading manufacturers of linoleum and one of the largest manufacturers of explosives in the United Kingdom. The view had been held by some of our Canadian correspondents who had looked into the matter, that it was not possible to obtain supplies of wood meal at the prices which had been named to them by certain United Kingdom firms.

The result has, however, been to confirm the statement that consumers in this country have no difficulty in obtaining large supplies of thoroughly suitable qualities of wood flour at prices ranging from £3 up to £4 per ton delivered, depending upon the particular quality of the flour and the situation of the individual mills.

It would appear that in recent times several factories have been established in Norway for the production of various grades of wood flour, and that increased supplies are consequently available. Whereas all correspondents state that they would welcome wood flour coming from Canada and would be glad to encourage the establishment of the industry, at the same time it would be out of all reason to expect them to pay more for the material manufactured in Canada than the figures at which they can readily obtain supplies from other sources.

From £3 5s. to £3 10s. would seem to be the average current value of the quality most in demand, but there would be no difficulty in placing any Canadian manufacturer who could do the business at these prices, in direct correspondence with several factories who would be prepared to negotiate for supplies.

It looks, however, doubtful if business on this basis would be profitable to any Canadian manufacturer unless the plant were situated close to a shipping port on tidal water. One firm mentions that the production of wood flour is attended by considerable risk from fire, and that most mills experience outbreaks from time to time.

CASEIN.

There have again been inquiries as to the possibility of obtaining casein from Canada. In this connection we received a visit from a gentleman who claims to have a large connection in and experience of the trade, and he emphasizes the rapidly increasing use of casein for purposes of various kinds. It was stated by this visitor and also by others that the demand has increased more rapidly than the supply, and that at the moment there is a shortage of casein of commercial value in the world and prices have practically doubled for some qualities within the past year.

The view taken in the past by Canadian officials and also by a number of agriculturists was that the prices realized for casein—which was produced mainly in the Argentine—were unremunerative to Canada, and that Canadian farmers would derive much more profit by utilizing their skimmed milk for stock feeding purposes. It is now, however, reported that a new process has been discovered for extracting the casein from skimmed milk without the use of acid and without in any way impairing the residue for stock breeding purposes. If this process should be successful, it would remove one of the chief obstacles which has deterred Canada from embarking in the preparation of casein, because it would then be possible both to produce casein, and to utilize the skimmed milk remaining over for feeding purposes.

Under these circumstances, the establishment of casein plants in districts where large quantities of milk are regularly available would furnish an additional source of income to farmers provided, of course, that prices remained at a satisfactory level. It is further rumoured that some of the Australian States are looking into the matter.

HARRISON WATSON.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

(*Mr. J. B. Jackson.*)

NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENG., January 22, 1908.

CANADIAN APPLES ON THE BRITISH MARKET.

The closing weeks of the apple season are now near at hand, and it is with much regret that I have to report that Canadian apples have not maintained their well-known reputation on the British market this season. Indeed, speaking from a knowledge of the principal markets in this district which include such important distributing centres as Leeds, Hull, Newcastle-on-Tyne and Sheffield, very many complaints have been against the packing and grading; in fact, the shipments this season are looked upon by the best judges in the trade as not only inferior in quality to those received for many years, but that the grading and packing has scarcely ever been worse.

FAULTY PACKING AND GRADING.

Various complaints have reached this office from the leading houses in the trade, which, after being fully investigated, all point to the one regrettable fact, viz.:—that the Fruit Marks Act has not been complied with. Different kinds of apples appear to have been indiscriminately packed together without any due regard to the grading. Especially does this apply to No. 2s., which has caused the merchants here to go to the trouble and expense of having the apples repacked before they could be successfully disposed of to the retail trade. It must be remembered that packing of this kind is equally as disastrous in its effects to the merchant on this side as it is to the exporter in Canada. When the customers purchase a barrel of apples, which, judging from the surface appearance, are of good sound quality throughout, but find, on investigation further, that this applies to the top layers only, then not only does this seriously injure the trade of the merchant, but, in the same way, materially lowers the reputation of Canadian fruit in his own estimation.

A FEW CASES OF COMPLAINTS.

An idea of the sort of grievances which have been found can be gathered from the following: A consignment of apples which were marked as No. 1 'Kings' and sold as such at auction to local merchants for 17s. per barrel, were, when opened, found to be inferior 'St. Lawrences,' and the purchasers eventually disposed of them for 5s. per barrel. Similar cases could also be quoted. Barrels, for instance, marked as No. 1 'Spy,' turned out to contain No. 2 'Snows,' and No. 2 'Baldwins' were packed in barrels marked No. 2 'Spy,' and so on. It is also said that many barrels marked No. 1, were not entitled to that mark as the fruit was grubby and small. The complaint as to the smallness of the fruit, by the way, is almost general in this district; indeed, on account of this, many No. 1's have only with difficulty been disposed of at a price which good No. 2's have obtained in past seasons.

The following paragraph, however, which appeared in the 'British Fruit Grower' of January 9, 1903, is commended to the notice of fruit circles in Canada, coming, as it does, from one of the recognized organs of the fruit trade in this country:—

NOVA SCOTIAN AND CANADIAN APPLES.

During the present season for Canadian and Nova Scotian apples our market representative has on two or three occasions called attention in his notes to the grading of these apples, the marks on the barrels (owing to the small size of the fruit in the crop) not representing the character of apples which had come to be associated with No. 1 and No. 2 grades in previous seasons. As the season has advanced the grievance felt by buyers has been accentuated by a distinct falling off in the actual grading of the apples, the first grade varying considerably in size of fruit, and in some cases the contents of the barrels should, in the opinion of some of the best judges in the trade, have been marked No. 3 instead of No. 1, and in a few instances No. 2 were found to be superior to the best mark.

It seems to us that, following the excessively dry season and the consequent all-round smaller size of the fruits, the Nova Scotia growers have failed to realize that the No. 1 grade of other seasons was not to be found, and that, in fact, there should have been none or very few of No. 1 marked. The 'large' apples of 1907 should have been packed as second grade. This explanation will, of course, not cover the instances where No. 2 and No. 1 have come mixed indiscriminately in one barrel. Some of the Nova Scotia fruit growers are as blind to their own interests as are their brothers on this side, and nothing short of coercion will ever make them pack fair and square. Nova Scotia has had a good name for square dealing in the past, but we would remind our friends on the other side that to be 'ill deemed is to be half hanged.' There is one point to which the *growers* may not be altogether to blame. Much of the fruit in Ontario and Nova Scotia is bought on the trees by Yankee and other packers, and it is quite within the possibilities that these gentlemen are responsible for some of the slipshod work. Such a thing as 'stove piping' the barrels of fruit in packing is not unknown to these Yankee gentlemen.

REDEEMING FEATURES.

The only redeeming feature to the whole disagreeable business is that the shipments sent into this district by some of the reputable apple shippers of Ontario have been all right in packing and grading, taking into account the average size of the Canadian apple of this year—but even these did not realise the prices which should have been obtained owing to the false, fraudulent and slipshod methods of those who were responsible for the actual packing of the majority of the fruit.

AMERICAN APPLES.

Canadian apples are to-day a poor second in this market to American apples, which have this year been better packed and graded than ever before.

J. B. JACKSON.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, January 30, 1908.

MOVEMENT OF POPULATION.

A rather interesting statement has recently been prepared by the Collector of Customs, and submitted to the Legislature now in session showing the number of persons arriving in and leaving the colony during the past four years, of which the following are the figures:—

Returns showing number of passengers outward from Newfoundland, transient and emigrating, for four years, 1904-'07:—

YEAR.	Transient.	Emigrating.	Total Outward.
1904.....	3,476	6,288	9,766
1905.....	3,733	6,885	10,618
1906.....	5,193	7,460	12,653
1907.....	4,168	7,029	11,197
Total.....	16,572	27,662	44,234

Return showing number of passengers inward to Newfoundland, including settlers, sportsmen or tourists, and former residents returned for four years, 1904-'07:—

YEAR.	Intended Settlers.	Ordinary Travellers.	Sportsmen or Tourists.	Former Residents.	Total Inward.
1904.....	826	1,643	1,029	6,796	10,292
1905.....	884	1,268	1,611	6,220	9,983
1906.....	1,447	994	1,862	7,117	11,420
1907.....	851	981	1,804	6,160	9,796

Number of persons arriving in and departing from this colony the past four years, 85,725.

APPLE IMPORTS.

My attention has again been called during the past season of apple imports to the unsatisfactory way in which several barrels sent here from Nova Scotia have been packed, and from a personal knowledge of the matter I am satisfied that the regulations laid down in the Fruit Marks Act were not observed, and that the complaints of the retailers here were well founded.

It will be instructive to read what a local Trade Journal has recently had to say on the subject:—

CANADIAN APPLES.

‘There is supposed to be a very rigid inspection of Canadian apples for export, but, notwithstanding, there is a crop of complaints again this year against the goods sent out. In England there is a vigorous kicking, by retail fruit and grocery men, against the faulty nature of the Dominion Government inspection of apples, and St. John’s grocers are making similar complaints. Many barrels of apples arriving here, branded No. 1, are really only second grade, and second grade apples are merely ‘windfalls.’ Mr. Arnaud, the Canadian Commissioner, made strong representations on this subject to the Dominion Government last year, but though the lines of inspection were tightened, there is still much to complain of. Individual dealers have also sent complaints to Canada, but the Dominion shippers always seem to make a plausible excuse, and wriggle clear of the complaints.’

NO USE KICKING.

‘When asked the other day, why he didn’t repudiate orders, and send inferior stuff back, one of the largest dealers in the city said: Under all the circumstances, it would never pay us to do so, and we must only grin and bear a situation which we cannot change. We order apples to reach us just when we want them in our trade, and, if we don’t accept what we get, we will have no apples to supply our customers. In the case of unsound apples, if we make complaint, the shippers will say that the goods were all right when they left their hands, and they must have deteriorated on the voyage. There is no way to disprove this contention, and rather than make a noise, from which no benefit can come, St. John’s dealers make the best of a bad bargain, and, by sorting and picking, try to get their own money out of the lot. And, even if a case be made out against the shippers, the latter will shift the blame over on the shoulders of the inspectors or growers, and that is the last word to be said on the subject.’

E D. ARNAUD.

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent also for New Zealand.
D. H. Ross, Stock Exchange Building, Melbourne.

BRITISH WEST INDIES.

E. H. S. Flood, agent also for the Bermudas and British Guiana.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Club Hotel, Yokohama, Japan.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

F. B. Ball, Rooms 39 and 40, Central House, Birmingham.

J. B. Jackson, cor. of E. Parade and Greek Streets, Leeds.

P. B. MacNamara, Canada Chambers, 36 Spring Gardens, Manchester.

W. A. MacKinnon, Sun Buildings, Clare Street, Bristol.

JAPAN.

Alex. MacLean, No. 14 Bund, Room B, Yokohama.

MEXICO.

A. W. Donly, Apartado, 91B, Mexico, D.F.

NEWFOUNDLAND.

E. D. Arnaud, Gazette Building, Water Street, St. John's.

SOUTH AFRICA.

John A. Chesley, Rhodes Buildings, Cape Town, Cape Colony.

CANADIAN COMMERCIAL AGENTS.

BRITISH WEST INDIES.

E. A. H. Haggart, Kingston, Jamaica.
R. Bryson, St. John, Antigua.
S. L. Horsford, St. Kitts.
Edgar Tripp, Port of Spain, Trinidad.

NORWAY.

C. E. Sontum, Grubbegd, No. 4, Christiania, Norway, agent for Sweden and Denmark also.

CANADIAN HIGH COMMISSIONER'S OFFICE.

GREAT BRITAIN.

W. L. Griffith, Secretary, 17 Victoria Street, London, S.W., England.

Harrison Watson, Canadian representative, City Trade Branch, 73 Basinghall Street, London, E.C., England.

CANADIAN IMMIGRATION AGENTS.

BELGIUM.

D. Tréau De Cœli, 29 Rue de Souci, Antwerp.

FRANCE.

Paul Wiallard, 10 Rue de Rome, Paris.

GREAT BRITAIN.

J. Bruce Walker, Assistant Superintendent of Emigration, 11-12 Charing Cross, London, S.W.

A. F. Jury, Old Castle Buildings, Preeson's Row, Liverpool.

G. H. Mitchell, 43 Cannon Street, Birmingham.

H. N. Murray, Exeter.

L. Burnett, York.

John Webster, 35-37 St. Enoch Square, Glasgow.

John McLennan, Aberdeen.

E. O'Kelly, 17-19 Victoria Street, Belfast.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS.
BIRMINGHAM, ENG., Jan. 20, 1908.

REMARKABLE GAS ENGINE.

Noticing the remarkable results of tests of a gas-engine in London, and not being sufficiently expert myself to give these results, I send you a report by the engineering correspondent of the Birmingham *Daily Post*.

"Professor Burstall presented to the Institution of Mechanical Engineers in London the result of five years of research on the gas-engine. He has obtained some remarkable results which will affect the design of all internal combustion engines. The object of the trials was to determine how the horse-power and efficiency of the engine varied with the degree of compression used, and also to test the truth, on a practical working engine, of the theoretical law in connection with the standard air engine, that the efficiency is alone proportional to the degree of compression.

"High compression—with the great risk of premature ignition—was necessary. The choice of a suitable gas engine was a very difficult problem. It was finally decided to adapt one to the professor's requirements, the construction of an entirely novel type of engine being quite out of the question on the score of expense. Following Professor Burstall's specification, that the cylinder should be constructed with a minimum of surface for a maximum of volume, very considerable alterations in the engine were made; so much so, in fact, that the Premier Company would not give any guarantee of its correct working. Consequently when the engine was set up all the real work had yet to be done, and nearly two years were spent in getting it to run satisfactorily. When the compression was raised above 140 lb. per square inch, much trouble was experienced because of premature ignition, and it was only after the insertion of the Lodge ignition, with a specially oil-cooled plug, that this difficulty was overcome.

"As an engine trial necessarily entails a quantity of subsidiary apparatus and fittings, it may be of interest to describe those used in connection with this test. The engine on which the trials were made was capable of giving 150 h.p. at 170 r.p.m., its diameter being 16 in. with a 24 in. stroke. The compression was varied by inserting packing pieces at the big end of the connecting rod, so that the compression space was always cylindrical in form. The engine worked with producer gas, supplied from a producer made by the Power Gas Corporation, the actual supply of gas being measured by a carefully calibrated meter. The calorific value of the gas was obtained by a Junker calorimeter, and also by analysis, the results obtained by the two methods agreeing very closely, when the condensation of the water was taken into account. The exhaust gases were also analysed, and thus it was possible to calculate the temperature at the end of the suction stroke. The maximum temperature sometimes reached as high a value as 2,000 degrees C., but in the most economical runs it varied between 1,200 and 1,400 degrees C. The heat carried away by the cooling water was measured in the ordinary way, except that the cylinder body, breach, piston, and valves were cooled by separate supplies of water, so that an idea of the relative heating of the different parts might be obtained.

"As the indicated horse-power exerted by the engine was one of the most important measurements to be made, the greatest precaution and care were taken. The mixture at each compression was also varied. This was effected by employing mixing valves with different sized air and gas ports.

"The results were exceedingly interesting. They show conclusively that at one particular compression the best results were obtained. Above that pressure the efficiency fell off considerably. This is at variance with the usual belief that economy increases with compression, and is due considerably to the cooling action of the walls of the cylinder. At high compressions the density and temperature of the gas are much increased, and consequently more heat is carried away by the cooling water.

"The efficiencies obtained were remarkable, even when the minute care, exercised throughout the trials, is taken into account. Starting with a mean thermal efficiency of 30 per cent. with a compressive pressure of 87 lb. per square inch, it rises with the compression till the wonderful efficiency of 43 per cent is obtained with a compression of 180 lb. per square inch, and then, as the compression rises still further, to about 270 lb. per square inch, drops slowly to 39.4 per cent. In Prof. Burstall's opinion, the most important point that his paper proves is that an efficiency of 43 per cent equal to the best performance of the Diesel engine, can be obtained with a maximum pressure of 360 lb. per square inch, and a temperature of only about 1,200-1,400 deg. C., showing that large gas engines can be constructed much more easily than is generally believed, as hitherto large mean pressures have been used to keep the size of the engine as small as possible."

P. B. BALL.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

(Mr. W. A. McKinnon.)

SUN BUILDING, CLARKE ST.,

BRISTOL, ENG., Jan 3, 1908.

AGRICULTURISTS PROSPEROUS.

On the whole last year has undoubtedly been one of the most successful and prosperous for agriculturists that we have known in recent times. Optimistic forecasts were made early in the year, and though a wet and cold July threatened to work great havoc, ample amends were made in August and September, the latter month having been particularly fine. It also happens that in the year 1907 prices were most satisfactory; better still perhaps that it is not merely a temporary fluctuation in values that has produced this result, but rather a changed state of circumstances, the net result of which is likely to be a permanent increase in prices. The two following tables, as published by *The Times*, will, if read together, afford Canadian agriculturists an adequate view of the situation in Great Britain:—

	1907.	1906.	1907 compared with 1906.	
			Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.

EVAPORATED APPLES.

Since my former report on this subject (See Monthly Report for June, 1907, page 461) correspondence has come in, the views contained in which may be summarized as follows:—

1. The demand for evaporated apples depends chiefly on crop conditions as reflected in the values of green fruit. The best trade is done just after Christmas.

2. The favourite package appears to be the 25-pound box, put up in Californian style. The next in demand is a 50-pound box, and finally, the one-pound cardboard package meets a considerable demand for certain markets.

3. Grading should be very carefully attended to, it being essential that the fruit should be uniform in quality throughout the package, and throughout all the packages in any given consignment, which bear the same grade mark. Good sized fruit is always in demand; the colour should be pale, as nearly white as possible, the fruit being so treated as to retain its colour after being exposed to the air.

4. In certain districts price is a small consideration, high quality being essential, when as much as 8d. per pound is asked, retail; but the general average price varies from 4d. to 6d. per pound, retail, the bulk of the trade being increased as the price is reduced.

5. Rings are most in favour, though there is a considerable demand for whole cored if of good size and colour.

SOURCES OF SUPPLY.

As has been before stated, the market draws most of its supplies from the United States. One firm states that in its experience Canadian fruit has been found considerably superior. In any case, I would repeat that this and other products will always find a sentimental preference in the British market which will be quite sufficient to turn the scale, if in quality and price the Canadian article can hold its own with foreign competitors..

W. A. MACKINNON.

JAPAN, CHINA AND COREA.

REPORT OF THE TRADE COMMISSIONER.

(Mr. W. T. R. Preston.)

HONG KONG, January 15, 1908.

HIDES AND LEATHERS.

The importation of hides and leathers to Japan will probably develop to very large proportions during the next decade or two. Already there is not only a great demand for hides and skins, but for the finished products as well. Hides are imported from Asia, Australia and Europe. In two or three of the large tanneries, the out-put of which is purchased entirely by the Imperial government, only hides heavier than sixty pounds are used, but in others the ordinary hides find a ready market.

DUTY AND FREIGHT.

The duty on hides or skins—raw, dried, salted, pickled or undressed, amounts to about 44 cents per 100 lbs. The freight on hides, half dried or salted, from Europe to Japan is about one-half the amount that is charged from the ports on the North American continent, the result being that but little of this trade comes across the Pacific Ocean.

In respect to sole leather, cow, calf, sheep, goat and others, the matter is reversed. Almost all of these are imported from the United States. This is particularly the case with sole leather. Fully ninety per centum of the last year's importation came from the United States.

TOTAL IMPORTS OF LEATHERS.

The total import of these items during the last four years exceeded ten million yen. The duty on sole leather amounts to about \$1.70 per 100 lbs., while the duty that is levied on the other leathers is ten per centum advalorem.

The Japanese are engaged extensively in the manufacture of leather goods,—trunks, valises, bags, boots and shoes. They are being persistently canvassed by representatives of United States firms. This is a case where I believe profitable business connections might be established, if representatives of Canadian firms would visit Japan with samples of the products of Canadian tanneries.—

JAPANESE CONSUMPTION OF CHEESE.

Among other western habits that is becoming prevalent among the Japanese is the consumption of cheese. This, like the use of butter in the East is an acquired taste. That in the course of the next few years, it will develop to a considerable extent there can be but little doubt. Already there is quite a reasonable importation of select Canadian cheese put up in jars or packages, but this is owing to a demand from the foreign population residing at the great shipping ports.

OPPORTUNITY FOR CANADIAN DAIRYMEN.

A product that is made by the Oblat Fathers in the northern part of Japan, and which resembles fresh Holland cheese, finds a very ready sale among the better classes. The demand for this article far exceeds the supply. There is a good opportunity here for enterprising Canadian dairymen to supply an active demand.

The large or ordinary cheeses are now offered for sale at Japanese provision stores throughout the large centres, and in reply to inquiries dealers assured me that, with the changed conditions of the people, there is an ever increasing demand for this article of food.

SHOULD SELL DIRECT.

The necessity for Canadian dealers or manufacturers of dairy products getting in touch with foreign buyers direct, instead of through commission merchants in New York and San Francisco, was brought to my attention a few days ago. In making inquiries about a certain brand of well-known Canadian cheese, I was informed that a Yokohama firm, which is one of the largest in the east, had ceased importing this manufacture, because a shipment that had been received through a San Francisco commission merchant had proved very unsatisfactory—in fact quite unsaleable. The San Francisco house refused to discuss the subject when complaints were made, and the result was that the commodity was dropped from the list of future purchases and was replaced elsewhere.

There is an undoubted possibility of erecting a good market in the east for Canadian cheese. But this, like that of other commodities, will necessitate active business enterprise.

CONSUMPTION OF BUTTER IN JAPAN.

The use of butter by Japan is an experience of comparatively recent date. A taste for this dairy product is very rapidly developed. There is a general consensus of opinion that there will be an enormous demand for this commodity in the course of a few years.

TOTAL IMPORTS OF BUTTER.

The imports of butter into Japan during the last seven or eight years may be seen by the accompanying schedule:—

	BUTTER.	
	Kin.	Yen.
1900	159,561	109,021
1901	681,273	119,339
1902	198,457	140,327
1903	201,021	148,109
1904	180,271	122,069
1905	184,176	133,860
1906	241,430	175,521

BUTTER IMPORTS FROM CANADA.

The imports of butter from Canada as shown by the Japanese statistics are as follows:—

Year.	Kin.	Yen.
1900	8,712	6,216
1901	2,603	1,499
1902	5,675	3,664
1903	10,793	7,227
1904	15,668	10,524
1905	21,553	14,515
1906	24,605	22,957

In an official Japanese Report on the question of the quality of butter imported into Japan, Denmark stands first on the list, followed closely by France. The amount imported from Canada has been quite immaterial, in comparison to the total amount reaching the country.

BUTTER NOT SATISFACTORY.

Canada was just establishing an enviable reputation, when a large shipment from one of the western provinces turned out very unsatisfactorily. And unfortunately it had been extensively distributed before the importers became aware of its character. Personal complaints on this point met me in several large centres in different parts of Japan.

I finally followed the matter up until, quite accidentally I got in touch with the importers, and secured abundant evidence of one of the most ill-advised shipments that could possibly have been made from Canada. The result of the transaction is that a serious obstacle has been created against a growing trade, the facts connected with the unfortunate episode having been circulated far and wide. I learned that these dealers had transferred their importations to the Australian product.

COST AND TRANSPORTATION.

This naturally brings up the question of the cost of the transportation of butter from other countries to Japan in comparison with the freight expenses attached to the import from the Dominion.

Australia.—Distance from Yokohama 6,700 miles, the journey occupying about six weeks. Butter is carried in refrigerated storage all the way at one penny per lb., or at the rate of \$40 per ton.

Denmark.—Distance from Yokohama 12,800 miles, occupying 50 days, \$10 per ton, or, if in cold storage an increase of 25 per cent, making the charge \$12.50 per ton.

Holland.—Distance from Yokohama 12,300 miles, occupying about six weeks, \$10 per ton; or if carried in cold storage, an increase of 25 per cent, making the charge \$12.50 per ton.

Calgary.—Distance from Yokohama 640 miles by rail, and 4,300 miles by sea, totalling 4,950 miles, occupying about 14 days, at the rate of \$36 per ton, without cold storage on the ocean.*

NOTE.—This is based upon a payment of \$27.41 for 1,500 lbs., for which I saw the receipt.

It will also be interesting to know that to the shippers who send all their goods by certain European steamship lines, a bonus of ten per cent of the amount that they pay during the year is refunded at the close of each year.

The countries referred to in the above are the competitors of Canada for the Far Eastern dairy trade. Butter, of course, will in a sort time, replace the consumption of margarine, the trade of which is now largely in the possession of Holland.

But in order that Canada may be able to fairly compete with these countries, there will have to be a change in the conditions of manufacturers and transportation. On this point the inferences to be drawn are naturally obvious, and do not necessitate further explanations.

W. T. R. PRESTON.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, December 24, 1907.

THE TARIFF.

The tariff has passed through the committee of the House of Representatives. The Senate will meet to consider it in January next but the House of Representatives will not meet again until the middle of March, so that the tariff, as adopted by the committee, will be in force for the next three months. Very great reductions have been made from the form in which it was first introduced. An estimate has been made that in the original form it increased the duties by two millions sterling and of that increase one and a half millions have been removed in committee. The new tariff will be about five per cent higher than the old tariff. On some articles it is considerably higher, but on no line of any importance is it so high as to be prohibitory. There is no doubt that it will stimulate home production but not very much more than did its predecessor and in the same lines, such as boots, shoes and apparel, in which a good deal of progress has been made since the union of the states. It must be remembered that while there is some increase in the duties on the lines which Australia is likely to produce for itself, yet this advantage is to some extent counter-vailed by the conditions which the government has announced will be exacted from local manufacturers. Until these conditions are known and their effect clearly understood there is not likely to be an investment of new capital to so liberal an extent as otherwise might be the case.

THE EFFECT ON IMPORTS FROM CANADA.

On most lines the effect of the preference granted to the United Kingdom is of more consequence than the additions to the tariff and if Canada secures the advantage of this preference as, I trust, it may later on, its position will be materially improved over that under the previous tariff. In many of the lines Australia must import and the advance of 5 or even 10 per cent in the present state of prosperity will not materially affect imports. The chief obstacle in the extension of the Canadian trade under the new tariff will be that existing during the last six years, the inability of Canadian manufacturers to fill orders they might otherwise obtain. Taking the chief items of imports from Canada.

APPAREL AND TEXTILES.

Upon apparel generally, the old duty was 25 per cent. The new general duty is 40 per cent on articles containing wool, and 35 and 30 per cent on other articles with a preference of 5 per cent on British goods. Canadian imports will pay 35 and 30 per cent. The extra 10 per cent will somewhat affect trade which was never large. Piece goods of cotton is the largest item under this general head. The old duty was 5 per cent, the new duty is 5 per cent in the general tariff and free from the United Kingdom. Flannellette is another considerable item. The old duty was 15 per cent. The new general tariff is 10 per cent and the preferential 5 per cent. In cottons and

flannelettes, the Canadian competition has been almost wholly with the manufacturers of the United States and the change in tariff will not affect that competition. The preferential advantage of 5 per cent is certainly favourable to goods from the United Kingdom, which may displace some Canadian products. Canvas, duck and sewing silk, in all of which there has been trade from Canada, are unaffected by the tariff. They are free now as they were before.

ARMS AND AMMUNITION.

The trade with Canada is limited to one class of cartridges not made in England. The duty on the cartridges, which were before free, is now general tariff 20 per cent, preferential 15 per cent. It is possible that this advantage of 15 per cent may cause English manufacturers to take up the line hitherto obtained from Canada and the United States. The duty should to some extent encourage the filling of cartridges in Australia.

BOOTS AND SHOES.

Under this heading are included the products of both leather and rubber. The old duty on leather, boots and shoes was 35 and 25 per cent. The new duty is 35 per cent general, and 30 per cent preferential. The duty on rubber shoes was 20 per cent. Under the new tariff it is 25 per cent general, and 20 per cent preferential. Gum boots, formerly free, are now 5 per cent general, and free from the United Kingdom. As the duty on leather has been advanced from 15 per cent to a duty of 30 per cent general tariff and 20 per cent preferential, the 5 per cent additional duty upon boots and shoes will not afford much additional protection to the local boot and shoe manufacturers, but the preferential tariff should be of some advantage to the manufacturers of the United Kingdom. The Canadian share of the trade in leather goods has for some time been very small, the main importations being rubber goods in which Canada is likely to hold its own.

DRUGS AND MEDICINES.

The articles included under this heading coming from Canada are mainly unchanged in duty and the trade, so far as the tariff is concerned will be unaffected.

FANCY GOODS AND JEWELLERY.

Under the old tariff a duty of 20 per cent was levied upon this line. The duty has been advanced to 30 per cent general and 25 per cent preferential. Jewellery and imitation jewellery was mainly 25 per cent under the old tariff. Under the new it varies from 30 to 40 per cent general tariff with a preferential duty of 25 and 35 per cent. The trade is not very large in these lines and is not likely to be seriously affected.

FISH.

The duty on tinned fish under the old tariff was 1d. per lb. That duty has been preserved under the new tariff, but the duty on fresh fish, smoked and frozen, has been advanced from 1d. to 1½d. per lb. The advance is not likely to affect the trade from Canada as the importations of frozen fish have made no advance for the last three years and it is of but a limited extent.

FRUIT.

The only fruit likely to come from Canada is the apple. The duty is unchanged. No Canadian exporter has shipped fruit for some time. The demand for British Columbia apples is as strong as ever, but no supply has been procurable.

FURNITURE.

In the committee of the House of Representatives the prohibitory duty upon chairs was materially changed. The old tariff placed a duty of 20 per cent upon all furniture. Under the present tariff the duty upon furniture is 40 per cent general and 30 per cent preferential. Lounges and settees, however, are 30 per cent without any preference. The largest importations from Canada are included in the 30 per cent items. Under the tariff, as introduced, cables were despatched countermanding all orders, but upon the revision in committee instructions were at once forwarded to resume shipments. The extra 10 per cent duty will not materially affect Canadian trade.

GRAIN, FLOUR AND HOPS.

There are no changes in the tariff to affect imports from Canada in the articles under this heading.

IMPLEMENTS AND MACHINERY.

The duty on ploughs and parts, chaff cutters and cultivators other than disc is unchanged. The duty on seed drills has advanced from $12\frac{1}{2}$ per cent to 25 per cent. Stripper harvesters and strippers are fixed at the former specific duty of £12 and £6 respectively. The duty on agricultural, horticultural and viticultural implements and machinery, not specialized, is 15 per cent general tariff and $12\frac{1}{2}$ per cent preferential. On mowers, reapers and binders a duty of $17\frac{1}{2}$ per cent has been fixed, but it is not to go into effect until it has been declared by a resolution of both Houses of Parliament that the manufacture of such articles has been established within the Commonwealth. It is not likely to be put into effect for some time to come. The Manufacturers' Association has declared that under the conditions fixed by the court respecting wages and the price fixed at which they must sell their goods by the government, it will not be possible for strippers and harvesters to be made at a profit within the Commonwealth. This is probably going too far. It is not likely that the trade from Canada will be very much affected at the present time.

RUBBER GOODS.

The exports of rubber from Canada consist mainly of boots and shoes which have already been dealt with. The duty on rubber hose and general manufactures is 25 per cent general, and 20 per cent preferential. The bulk of the goods in these lines comes from the United Kingdom and the preference should certainly be to its advantage and make it more difficult for Canada to compete. The Canadian trade is at present not very large.

MUSICAL INSTRUMENTS.

On pianos and organs the old duty was 15 per cent. The new duty is 30 per cent general and 25 per cent preferential. The change in duty will not affect organs, but will be an additional obstacle in extending the market for Canadian pianos, particularly if Canada cannot obtain the preferential rate.

MACHINES AND MACHINERY.

Typewriters, sewing machines and printing machines are still free. On the other classes imported from Canada the old duty was 20 per cent, $12\frac{1}{2}$ per cent and free. The duties have been increased to 30 per cent on most lines with a preference of 25 per cent, but there is a provision for the importation of machine tools in departmental by-laws free, which are unlikely to be made in Australia and, as most of the machinery imported from Canada will come under this category, it is hoped that the free provision will be extended to them.

METAL MANUFACTURES.

On the lines imported from Canada the old duty varied from 12½ to 20 per cent. The new duty is 25 per cent general, with a preference of 20 per cent. The duty on these articles in which there is local manufacture will be an impediment to Canadian trade, but not to the extent that the additional duty would seem to indicate.

PAPER AND PRINTED MATTER.

The bulk of the importations from Canada is printing paper and upon it the duty is unchanged. There is an important improvement respecting catalogues, price lists and advertising matter. Upon all of these lines the old duty was 3d. per lb., but under the new tariff these goods, when they refer to the goods of a manufacturer or producer not having an established place of business in Australia, will be admitted free.

SPIRITS.

The tariff is unchanged so far as Canadian interests are concerned.

TIMBER.

The timber duties have been very materially changed. Under the old tariff the duty on undressed timber 12 x 6 inches and over, was 1s. per 100 superficial feet. It has been reduced under the new tariff to 6d. per 100 feet, and applies to New Zealand pine, which has hitherto been admitted free. On timber 7 x 2½ inches and over and up to 12 x 6 inches, the old duty of 1s. 6d. per 100 feet has been changed to 2s., and in sizes below 7 x 2½ inches it has been made 2s. 6d. On dressed timber the duty is as before, 3s. per 100 feet. Laths have been advanced from 5s. per thousand, to 7s. 6d. The purpose of the increases has been to encourage the production of timber locally and also to promote resawing. Pine from Queensland is presumed to compete with foreign importations of soft woods, but the amount which it is able to supply has been very limited. There are no figures available now by which the amount could be definitely ascertained, but in 1905 out of an importation of over 500,000 pounds sterling, Queensland was credited with only £42,000 in value. It has been stated that last year the total exports of this timber from Queensland were less than 5,000,000 feet. The effect of the duties may to some extent change the sizes imported, but will not change the quantities.

VEHICLES.

As introduced the tariff threatened to destroy the import trade. It has been materially changed in the committee and the specific duty has been changed to an *ad valorem* one. The old duty was 20 per cent. The present duty is 30 per cent with a preference of 25 per cent. Cycle parts have been made 15 per cent, the smaller parts 5 per cent, with a preferential duty of 10 per cent and free respectively. On motor cars the duty has been made: On the bodies, 35 per cent, and 30 per cent preferential, and on the chassis with rubber tires the duty is 5 per cent and preferential free. On buggies and carriages generally the old duty of 25 per cent has been advanced to 35 per cent, and the preferential duty 30 per cent. Parts of carriages, such as sets of wheels, under gear, buggy hoods, and carriage bodies in the white, bear the same duties as carriages. On shafts the duty is 30 per cent, preferential 25 per cent. The Canadian trade for the last three or four years has been very small in buggies and parts and will not be much affected by the tariff. The old tariff had cut down the importation of buggies very considerably. The chief Canadian exports have been in bicycles and motor cars. The new tariff is certainly not advantageous to Canadian productions as it now stands.

THE CONCLUSION.

Summing up, one-half of the volume of imports from Canada are unchanged in respect to the tariff, two-thirds of the balance are not materially affected, and about one-sixth may be affected somewhat seriously. There will need to be some adjustment to meet the new conditions in it.

NEW ZEALAND.

Trade in New Zealand is reported as good. Imports show additions and exports are fairly maintained in volume though reduction in prices must show a reduction in value. The exports of butter for September, October and November were below those of a similar period of 1906 and 1905, but there was a considerable increase in the exports of cheese. Wool in quantity, was equal to a similar period of the two previous years. Frozen meat will show a very large increase. The price of flour has been reduced owing to a competition from Australia and quotations are £13 10s. in Wellington. The market for hemp is still very dull. Prices have been reduced to £24 10s. 0d. for 'fair' and £23 10s. 0d. for 'common.'

NEW SOUTH WALES.

The imports for the first eleven months of the current year show an increase in merchandise of £5,198,207, and an increase in the exports of merchandise of £6,446,037. There was a decrease in the exports of gold of £3,568,939, leaving a net increase of exports of £3,077,098. The decrease in the exports of gold is in part due to a decrease in the Australian production and in part to the balance of trade being so largely in favour of Australia that gold is not largely required to meet liabilities abroad. Import orders have been materially affected by the uncertainty of the tariff, but trade is likely to be resumed in the belief that the tariff, as adopted by the House of Representatives, will finally pass. Orders have already gone forward by cable and letter for Canadian goods.

Good rains have fallen in New South Wales and very heavy rains in Queensland. The prospects of the country are very much better than they were three or four months ago. These rains were too late to secure a good yield of wheat in New South Wales, but they have materially improved the harvests in the other states so that there will be enough for home consumption and probably a little to spare.

WOOL.

At the Sydney wool sales prices have not followed the heavy decline in England but there was a considerable quantity of the wool offered unsold. It was, therefore, deemed advisable to cancel the sales for some time in the hope that money might be easier, which would induce freer bidding. The receipts show a considerable increase over those of last year as was anticipated, but experts still hold that the quantity of wool produced in Australia in 1907-8 will be below that of a year ago.

NEW SOUTH WALES TIMBER.

The government of New South Wales appointed a commission to inquire into its timber resources and found that the quantity of timber has been below the common anticipation and has recommended that the export of at least two varieties, iron bark and tallow wood, should be prohibited for ten years. It has been the common belief that the turpentine wood of this state would resist the ravages of the teredo or marine borer, and there has been a considerable export of this timber to Vancouver to be used for piles. Recently samples of this timber, which had been thoroughly riddled by the teredo, were exhibited in Sydney. The piles had only been in position for about five years and in that time they had been destroyed by the insect. The timber was sunk in brackish water in the mouth of a river affected by the tide. Possibly, the turpentine may be unaffected in the waters of British Columbia, as it has been in most parts of New South Wales.

TRADE DESCRIPTION OF IMPORTED LEATHER.

A former order respecting a description of imported leather has been cancelled and the following substituted in its place: It has been decided for the purposes of regulation 6 (2) (g), that:—1. The trade description of sole leather containing not more than a total of 3 per cent of glucose and sugar taken together, and not more than a total of 5 per cent of fats and oils taken together, need not state the names or percentages of those substances. 2. The trade description of leather other than sole (a) containing not more than 3 per cent of glucose and sugar taken together, need not state the names or percentages of those substances; (b) need not state the names or percentages of fats and oils contained.

FANNING ISLAND.

Fanning Island, the mid-ocean station of the Pacific cable, was recently sold by order of the court and was bought by Father Rougier. This has led to a report that the island might pass from British possession. A sale could not affect the sovereignty of the island. As a matter of fact it was bought on behalf of a legal gentleman, a British subject of Fiji, who had previously been half-owner of the island. The sale was simply to settle a partnership.

J. S. LARKE.

CITY TRADE BRANCH.

REPORT BY CANADIAN REPRESENTATIVE.

(*Mr. Harrison Watson.*)

73 BASINGHALL STREET,
LONDON, E.C., ENG., January 31, 1908.

APPLES.

Although many of the Canadian shippers of high class apples should have enjoyed a profitable year, it is to be feared that what promised early in the autumn to be a most satisfactory season for Canadian apples is ending in disaster and in some cases will result in heavy losses to Canadian shippers.

This unsatisfactory state of affairs is mainly due to two causes, (1) the inferior size and appearance of some of the fruit, which, in many cases, is of too low a grade for the requirements of this market, and (2) the enormous shipments from Canada and the United States which were discharged into the United Kingdom towards the end of the year and which thoroughly demoralized a market in which values had already declined. These two factors have caused a heavy break in prices, and the opinion is held that some of the low grade fruit which has recently come to hand cannot possibly realize prices which will anything like cover the cost of labour, packages and freight.

There have been in Covent Garden and elsewhere many complaints about false marking and bad grading, which, in some instances, seem to be well founded, but a cardinal mistake has been made in shipping apples of too low a grade for this market, possibly under the impression that as there was a reported shortage of apples at the beginning of the season, a ready and profitable market could be found for the time being for apples of all descriptions and sizes. There certainly is a large demand for fruit of good appearance, but the consuming public will not buy small apples of bad colour, such as have been latterly received from Canada, and under the circumstances prefer bananas and oranges, and other fruits which are available in large quantities. One authority stated that it is unwise to ship No. 3 grade apples to this market under any circumstances.

Upon the whole, it would appear that much of the present trouble has been caused by Canadian shippers sending over in a year when the apple crop in Canada has been partly a failure, fruit which, under ordinary circumstances they would probably not ship, under the impression that owing to the failure of the apple crops in the United Kingdom and on the Continent, the United Kingdom would be willing to pay high prices for fruit of any kind.

CIDER.

It is interesting to learn that a firm here is about to experiment as to the possibility of using for blending purposes, cider made in Nova Scotia. In the past, the opinion has been held in Canada that several of the varieties of apples grown in Ontario are better suited for cider-making purposes than the varieties which are grown to the largest extent in the Annapolis valley, and most of the cider plants in the Dominion are located in Ontario.

The geographical position of the maritime provinces, whereby lower rates of transportation can be obtained to the United Kingdom than are possible from more westerly points—particularly when these latter are inland—gives Nova Scotia considerable natural advantages for developing this trade, and if the experiments are successful, it is likely that an industry of some importance may be developed.

As excellent juice can be produced from apples, which, owing to their size and appearance, are unsuitable for table use, and as the canning and evaporating industries are less developed in this part of Canada than in Ontario, the success of the cider industry should be very advantageous to Nova Scotia apple growers.

EVAPORATED APPLES.

Among the Trade Inquiries received during the past month was an intimation from one of the largest wholesale grocery firms in England to the effect that they would like to arrange to represent some first-class reliable Canadian producer of evaporated apples who is in a position to furnish large and regular supplies and is well situated for conducting export trade. This firm operates in the United Kingdom and also on the continent, and the opening should form a valuable outlet for the Canadian industry.

HANDLES AND OTHER MANUFACTURES OF WOOD.

As a result of publicity given by this office and other Canadian agencies regarding the demand existing in the United Kingdom for manufactures of wood of all kinds, we have recently received letters from several Canadian manufacturers intimating that they would like to develop export trade and asking us to furnish them with prices which are being paid for handles and various other lines.

It can be readily understood that information of this description is most valuable to manufacturers as enabling them to judge if this particular trade would be of a profitable nature or not. Upon the other hand there are such endless varieties of handles and wooden goods of all descriptions that it is practically impossible to give any general idea of prices except in a few standard lines, and even then much depends upon the quality of the particular lot. Many buyers moreover, who would gladly consider samples and quotations, are quite unwilling to state what prices they can offer, holding that it is for the seller to make quotations.

It is, however, quite likely that importers would frequently be willing to give a good deal of valuable information upon these points to manufacturers who took up the matter in a business-like manner and showed their ability to furnish supplies. We have mentioned the matter to quite a few importers, but they practically all hold the view that the best plan would be for the Canadian manufacturer to send over samples of what he wishes to supply as a preliminary to further negotiations, and there is no difficulty in referring any manufacturer seeking business in definite goods to firms here who will be ready to correspond with them.

From one source we are informed that in a very general way, the current values of standard broom handles, 51 x 1½ inches, made of good pine or other white wood, are at present about as follows:—

No. 1 quality	14s. to 16s. per gross.
No. 2 “	11s. to 14s. “
No. 3 “	8s. to 9s. “

c.i.f United Kingdom ports.

Quotations, however, fluctuate so frequently that these figures at the best, only convey a very general idea.

REFERENCES.

Reference has been made upon a previous occasion to the necessity of Canadian firms indicating references of some kind or other when writing direct to United Kingdom firms offering their services as resident agents.

This is a matter in which, of course, the government offices accept no responsibility, but the question of reference is usually about the first point upon which the manufacturer or shipper seeks information. We believe that a good many Canadian firms deal with this matter when replying to trade inquiries, but we so frequently hear from United Kingdom houses whose inquiries we have forwarded, asking if we can tell them anything about some correspondent named, that it is apparent that the precaution is frequently neglected. It frequently results that firms take no further action whatever in the absence of such information.

Many of the Canadian manufacturers' agents already represent firms on this side and should consequently have no difficulty about references, and others should be able to arrange the matter through the United Kingdom agents of their bankers.

HARRISON WATSON.

BIRMINGHAM.

REPORT OF COMMERCIAL AGENT.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., February 5, 1908.

HALL-MARKING IN GREAT BRITAIN.

I have had numerous inquiries both from Canada and Great Britain as to what effect the Canadian Gold and Silver Marking Act would have on the export trade from the United Kingdom to Canada, and whether the British hall-mark of 9 carats could be changed, or whether a hall-mark of 10 carats could be established in the United Kingdom (which it is proposed shall be the standard for Canadian goods).

The British government does not in itself hall-mark any articles, but various local assay offices are established under power granted by statute in each case. To be positive, I applied to the Standards Department of the Board of Trade, and I am informed that gold wares sold or exposed for sale in the United Kingdom, exported for sale abroad, or imported into the United Kingdom, are required to be hall-marked and to be of the standard degrees of fineness recognized by law, namely, 22, 20, 18, 15, 12 and 9 carats. There is no standard of fineness of 10 carats. Wares of 20 carat standard are not hall-marked in England or Scotland. An Act of parliament would therefore have to be passed before goods of 10 carats in fineness could be hall-marked in the United Kingdom.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(Mr. D. H. Ross.)

STOCK EXCHANGE BUILDING,

MELBOURNE, January 20, 1908.

THE AUSTRALIAN METEOROLOGICAL SERVICE.

There is probably no other country in the world which is so vitally affected by varying weather conditions as Australia. The character of a season makes all the difference between prosperity and financial strain to its people. Australians have therefore every incentive to study meteorology, for the weather must always be of supreme interest and the supply of accurate daily forecasts is a question of first importance. On January 1, 1908, the Commonwealth government inaugurated the first federal meteorological service by taking over the control of the observatories in the capital cities of the states, and daily forecasts are now issued from the central observatory in Melbourne.

The central office receives every morning 217 reports from stations within the Commonwealth, and this work is facilitated by the telegraph system, which is entirely under the control of the Postmaster General's Department. In issuing the daily forecasts, the federal meteorologist publishes the weather conditions experienced throughout the whole of the Commonwealth on the previous day by giving details of the maximum and minimum temperature, humidity in the atmosphere, and the rainfall (if any) is accurately recorded. The new service has at its command the most improved scientific instruments and all the information available in Australia is collected according to one regular system.

ITALIAN IMMIGRANTS FOR WESTERN AUSTRALIA.

For some time past the government of Western Australia has been negotiating an immigration scheme with the Italian authorities, and matters have advanced to a point which necessitated the Italian consul at Perth to recently proceed to London to arrange the final details with the Agent General of the state interested. The government of Italy has assumed almost a paternal interest in the proposals, and the advantage of having the scheme so endorsed is recognized in Western Australia. The land to be made available is contiguous to the railways, and settlement is to be made on one side of the line only, the idea being to have British settlers on the other side to prevent exclusiveness. Schools for teaching English and religious and medical conveniences will be provided by the government until such time as the settlers can undertake such responsibilities independently. To assist the settlers to develop the land, provision is made whereby the state Agricultural Bank will make advances under the ordinary terms to other customers. The Italian consul at Perth will personally select the immigrants in Italy and will periodically report on the settlements to the state government until such time as the land is opened up and cultivated.

DOMESTIC SERVANTS FOR AUSTRALIA.

One of the Australian states is apparently achieving considerable success in sending out domestic servants from the United Kingdom to meet the local demand. Within the last three months, over 500 girls have arrived in Australia under agreement to accept positions as domestic servants and places were easily and immediately found for them on arrival. These young women are carefully selected and must possess good health, good references, good training, and be of good moral character.

Each contingent is sent out in charge of a matron and the government of the state interested guarantee a position immediately upon arrival. The project has been extensively advertised throughout the United Kingdom with the result that a surprisingly large number of applications have been received in London from young women desirous of emigrating to Australia.

EXPLOITING SCOTLAND FOR IMMIGRANTS FOR AUSTRALIA.

The energetic Immigration League of Australia has marked out Scotland as one of its chief spheres of influence. Some fifty thousand emigrants are leaving Scotland every year, and the league have resolved to secure a proportion of them for Australia, as they are regarded as amongst the most desirable colonists. Scotch country newspapers are being supplied by the league with articles about Australia by men who have intimate knowledge of the districts in which the papers circulate, and who can, therefore, give some local colouring to interest readers. One letter sent is addressed to the press of Fife, the headline of which is "Australia for Fife Folk," as many leading men in Australia have come from that district. Other letters of a similar nature are going to Inverness, Aberdeen and the Lowland counties. The league is also endeavouring to interest private individuals in Scotland in its work, and to this end

it has sent letters to a large number of parish ministers and doctors, who are often consulted by their parishioners and clients who intend going abroad. If the scheme elicits a good response, it will be extended to other parts of the United Kingdom.

BROWN COAL DEPOSITS NEAR MELBOURNE.

The Victorian Railway Department has just concluded exhaustive experiments upon brown coal obtained from the extensive deposits near Melbourne. Practical tests have been made with most satisfactory results, especially under stationary boilers in the railway workshops. As the state Railways Department imports the principal portion of its coal requirements from Newcastle, N.S.W., and in view of electrification of the Melbourne suburban railways, further tests will be made to prove utility of using large quantities of cheap brown coal obtainable so near at hand.

AUSTRALIAN CONNECTION BY CABLE WITH TASMANIA.

While the land telegrams and telephone systems throughout the Commonwealth are vested in the Postmaster General's Department, yet the missing link in the state control is the cable from the mainland to Tasmania, which is owned and operated by a private company. Prior to federation, several states guaranteed an annual return to the company, the term for which expires in 1909. Recently an offer made by the government to purchase the existing cable was declined by the owners owing to the conditions exacted. Tenders are therefore being called by the government for laying two cables from the mainland to Tasmania.

TENDERS AND SPECIFICATIONS FOR TASMANIAN CABLES.

The Australian Postmaster General has issued specifications and invited tenders for the construction and laying of two new cables between Tasmania and the mainland. A deposit of £1,000 must accompany each tender, and tenders close at the Postmaster General's office, Melbourne, on April 14, 1908. Briefly the tender forms provide for the manufacture and laying of 350 nautical miles of main cable, 20 miles of intermediate cable, and 20 miles of shore-end cable. For spare cable the tenders are for 30 miles of main cable, 5 miles of intermediate and 5 miles of shore-end cable. In each cable there are to be 5 nautical miles of shore-end, 5 of intermediate, 175 of main cable, and then 5 of intermediate and 5 of shore-end on the opposite shore—a total length in each cable of 195 nautical miles. These distances are subject to revision after the final survey of the route.

The conductor of the cable is to be composed of a strand of seven copper wires of equal diameter, weighing 107 lbs. per nautical mile. It is to be insulated by three coatings of purest gutta-percha, weighing 150 lbs. per nautical mile. The coil is to be tapped with an approved tap, overlaid with brass tape about $\frac{3}{4}$ inch wide. The brass-taped coil must be served with yarn or Russian long-dressed hemp and sheathed with galvanized-iron wire of prescribed diameters. All the work of laying and completing is to be done by the contractors, so that the cables may be handed over ready for use, the first not later than March 1, 1909, the second not later than 31 days thereafter. Copies of the tender forms are going forward by this mail to the Superintendent of the Trade Commissioner Service, Department of Trade and Commerce, Ottawa, from whom information can be obtained by those interested.

THE AUSTRALIAN WOOL MARKET.

Prior to the opening of the present season it was estimated that the Australian wool output for the current twelve months would exceed that of the previous season when 2,090,188 bales were exported. It has recently been found that the shearing returns have not come up to anticipations and amended estimates state that there will

be a shortage of some 40,000 bales throughout the Commonwealth of New Zealand. The London wool sales open on January 21, when over 187,000 bales will be offered. The postponed Australian wool sales take place in Melbourne to-day and there is an element of uncertainty about the values to be obtained, on account of the financial stringency in the United States, and the failure of American buyers to operate, being accepted as the primary cause of the recent drop in prices.

DECLINE IN AUSTRALIAN BUTTER EXPORTS.

The long spell of dry weather experienced during the last few months, has had the effect of greatly curtailing the exports of Australian butter to London. Shipments to England since July 1, 1907, to date, compare with the corresponding period of the previous season as follows:—

	Tons.
1906-7.	21,426
1907-8.	12,933

The total shows a decrease of 8,493 tons, with the result that the demand cannot be met, despite that Melbourne shippers have been offering 104s. to 105s. per cwt. (\$25.30 to \$25.54 per 112 lbs.) for the product of the best butter factories.

IMPORTATIONS OF AMERICAN BARLEY.

In my report of October 28 (See Monthly Report for October, 1907, page 1187) I suggested that British Columbia exporters might take advantage of the probable Australian demand for barley and other cereals. A cargo, from a Pacific coast United States port, comprising over 36,000 bags of barley, arrived at Melbourne this month and went immediately into consumption. The demand for prime quality malting barley is likely to continue, which fact should not be overlooked by Canadian shippers.

AUSTRALIAN WHEAT, FLOUR, MAIZE AND OATS.

The rates ruling to-day for f.a.q. wheat are 4s. 4½d. (\$1.06) f.o.b. Adelaide, and 4s. 6d. (\$1.09) f.o.b. Melbourne, both quotations being in excess of London parity, which is to-day about 4s. 3l. (\$1.03) per bushel. The 1907-8 season will give a surplus of only 12 to 14 million bushels available for oversea export, mainly derived from South Australia. Flour is quoted at £9 5s. 0d. to £9 7s. 6d. (\$45.01 to \$45.62) per ton of 2,000 lbs., packed in 200 lb. sacks. South Africa has sent over 6,000 tons of maize (corn) to Australia during the last two months, but further supplies are not likely to be imported until August or September next. The crop of oats has been light in Victoria and South Australia—the principal producing states—but shipments are coming forward from Tasmania and New Zealand. Best Tasmania oats are quoted at 2s. 10d. (69 cents) per bushel, Melbourne. If the dry weather continues there is every probability of oats being imported by Australia within a few months.

THE COMMONWEALTH CUSTOMS AND EXCISE REVENUE, 1907.

I have been favoured by the Commonwealth statistician with the advance returns showing the Australian net customs and excise revenue (subject to slight correction) for 1907, as compared with 1906. The figures are as follows:—

1907—Customs revenue.....	£ 8,667,734	
Excise.....	2,236,878	
		10,904,612
Less drawback refunds.....	105,324	
Total.....		£10,799,288
1906—Customs revenue (net)	£ 7,273,035	
Excise.....	1,946,444	
Special W. A. tariff, &c.....	80,292	
Total.....		9,299,771
1907—Excess over 1906.....		£ 1,499,517

The new customs tariff was introduced in August, and the higher duties then enforced have had an important bearing upon the increase of £1,500,000 over the net collections in the previous year.

THE EXCESSIVE HEAT WAVE OVER AUSTRALIA.

Throughout the whole of Australia, but more particularly in the states of Victoria and South Australia, a heat visitation of exceptional severity has been experienced during the last few weeks. On Christmas Day the shade temperature in Melbourne was over 105 degrees. There were few days last week that were not equally hot, while the shade temperature in Melbourne one day exceeded 112 degrees, and in Adelaide several points higher. Inland districts report as high as 120 degrees in the shade. Numerous deaths have occurred through heat prostration, and business has been in a state of suspended animation. Losses of stock in the shape of cattle and sheep are reported from various parts of the Commonwealth. The mail closes with unaltered weather conditions and the government meteorologist is unable to forecast any immediate change for the better.

THE AUSTRALIAN CUSTOMS TARIFF, 1907.

The Senate meets on January 22 to ratify the new tariff which finally passed through the House of Representatives in December. Some items will likely be recommended by the government and certain amendments are looked for as the result of the debate in the Senate. It is anticipated that the upper house will have accomplished its revision of the tariff before the representatives meet on March 11. When the tariff is finally dealt with the consideration of the reciprocal trade agreement with Canada is promised by the Australian government.

COMPETITION FOR AUSTRALIAN 'NEWS' PAPER ORDERS.

A determined effort is being made by European manufacturers of 'news' paper to secure a proportion of the Australian business. Hitherto supplies have been chiefly drawn from the United States and Canada, but, with improved paper mills in Norway (and other continental countries), the competition is now very pronounced. At this juncture, it is well that the principal Canadian paper mills have such capable representation in Australia.

D. H. ROSS.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, January 21, 1908.

CONDITIONS OF SUCCESS.

I have, as an appendix to this report, added an open letter written by the editor of the *Australasian Hardware and Machinery* journal, a successful and well-circulated production, to a manufacturers' agent about to visit England to secure agencies. From a recognized authority upon Australian trade this letter should be of interest to Canadian manufacturers who think of attempting this market, confirming as it does what has appeared in my reports. The conditions, he notes, are applicable to trade generally as well as to trade from Great Britain. The conditions are so varied that it is impossible to state a rule that would apply in all cases.

EXPENSE.

First, as to expenses. I have statements of travellers who have done all Australia and New Zealand at one pound (£1) per day in eight months' travelling. They carry comparatively few samples which do not entail expense and live at boarding-houses, visiting only the cities and remaining in each some little time. The man who travels at the least expense is not always the most profitable traveller. He sometimes fails to secure the business that he might otherwise obtain. Though there is no necessity for an expenditure in drinks yet a little liberality in some cases very much facilitates trade, and nowhere more so than in the city of Sydney. It does not always mean purchasing trade by gifts, but it does mean a cultivation of friendship, which goes a long way in securing orders.

The second, third and fourth paragraphs refer to a condition that is often in dispute in Canada and has very much affected Canadian business. Canadian exporters are apt to fill all orders without much concern as to where these goods are to go. The trade has been made by the commission agent and he is morally interested in the commission. What the editor of the *Australasian Hardware and Machinery* states is true, that either he will throw up the agency or else he will only solicit orders from firms who give them to him direct when a commission is allowed only upon such direct orders.

I have again and again referred to this matter. There are representatives of New York and other houses who naturally attempted to secure the trade that has been made. They send an order to a Canadian manufacturer to be filled, generally at less price than the price quoted in Australia but demand from him a buying commission of about one-half of that paid to his authenticated Australian representative. The Canadian manufacturer, seeing that he gets on the whole about the same net price or within a little of it, fills the order and then refuses the commission upon it to his regular agent. The agent attempts at once to secure another house and, when he does this, throws up his Canadian agency. The Canadian business not being pushed speedily dies out. This applies more particularly to men who receive only a commission and are not paid the £100 referred to as a contribution towards travelling expenses. Canadian firms as a rule have refused to make any contribution of that kind. As a

consequence Canadian trade has rarely been taken up by firms with established connections, who can secure contributions from English and sometimes United States houses. A good deal of caution is needed in agreeing to such a contribution, that the house shall be of such a character that the payment of the sum would likely produce profitable results, and second, that it would be expended in securing the trade of the firm that pays it.

NEGLECTING AGENTS' INSTRUCTIONS.

Paragraphs five and six call attention to two items that also are of very great interest to Canadian exporters. They, like English firms, are apt to neglect the recommendations of their agents, frequently in respect to new designs and new samples. This applies to houses that have done trade in Australia for some length of time, but that trade has not developed as it would have done had the advice of the agents been heeded. I have at the present moment just seen the representative of a Canadian firm that has done a very steady business in Australia who is about to visit Canada with the avowed intention that unless there is a change in methods he will abandon the representation of the firm.

It is inconceivable that any Canadian firm should have so little knowledge of Australia as to imagine that any old style will do for this country. The trade of the world meets in this land and the leading manufacturers of all exporting nations are competing in the market. New goods and new designs make their appearance in this market as soon as they are produced, and though the Australians in some respects are conservative in their business methods they have still the universal desire for the newest.

ADVERTISING.

Respecting advertising: As much caution is required as in the payment of a contribution towards travelling expenses. Here, as elsewhere, money can easily be thrown away upon advertising, but there is no country where money properly expended brings better results. The Australians are a reading people and any one glancing at the leading journals will discern from the numerous advertisements that traders appreciate the fact and give great attention to publicity.

One point more in this connection. Too great care cannot be given in examining the merits of applicants for the agency, particularly, when expensive samples are a condition. With representatives of the government on the spot there is no need for a Canadian to make a hasty agreement that may entail considerable risks. But again and again this has been done without reference to Mr. Ross or myself and the first that I have learned of the appointment of an agent is by finding Canadian samples offered in an auction room. Sometimes the agent has been honest enough in his intentions but soon finds that he is unfitted to secure trade and he at once sells his samples, commonly forgetting to remit any of the proceeds to his principal. There are others who make a business of securing agencies for the sake of the samples. It is no wonder that some Canadian firms have failed in an export trade after an experience of the wasteful methods whereby they have attempted it.

COMMERCIAL CUSTOMS.

I add an extract from a letter of a Canadian firm that has been doing a successful and increasing business in this country for some years. They were good enough to write this letter in approving of a report which I had sent to the department some time ago. They then continue:—

‘We have made a close study of the needs and commercial customs of the different foreign markets we do business in, and aim to conform to their requirements as closely as we possibly can, and at the same time we endeavour to carry out to the best of our

ability our part of the contract in a perfectly straight and honourable manner, so that our foreign customer will have no reason to complain of any act or omission of ours. We also endeavour to give close attention to all details, and above all we make it a point to see that prompt and full replies and information are given in every case. We know that many manufacturers seek foreign business apparently with the idea that they can attend to such foreign trade at such time or times as will be most convenient to themselves, and which in many cases means that they are willing to fill foreign orders when they can do so without interrupting in any way their home business. This, of course, is altogether wrong and we are firmly of the opinion that foreign business can only be successfully carried on when the manufacturer determines to set aside a certain portion of his output for foreign trade, and sees to it that his products are suitable in every way for that trade, and that the same care and attention is given to the foreign business as should be given to the home trade. Orders for foreign houses must be given at least the same quick despatch as home orders, or dissatisfaction will surely result.'

THE OUTLOOK OF THE YEAR.

The year 1908 did not open as promisingly for trade as the year that has passed. A lowered yield of the harvest and of wool, a lower output of gold with the prospect that reduced prices of metals will lead to a lower output in quantity as well as in value, with some portions of the country suffering severely from dry weather, must affect the conditions of trade. So far as reduced prices of metals and wool are concerned the effect would be slight. While the return in money would be less, yet, as the price of goods imported will be proportionately lower, in quantities, the Australian purchasing power would be as great as ever. The reduction in the quantity produced is another matter and must affect the purchasing power of this country in the markets abroad. So far the drought is almost restricted to portions of New South Wales, heavy rains having fallen in the other states. The credit of Australia is high. The prosperity of the past four years has put the finances of the country, both private and public, in a fine condition. It may be, therefore, anticipated that the reduction in importations will not be so great as otherwise would be the case.

WOOL.

Though the wool year does not end until June next yet it is so far advanced as to lead to a fair anticipation of what the return will be for the year. It is anticipated that there will be a reduction in the yield of the present year of 40,000 bales as compared with last year. Queensland, South Australia, and Western Australia show increases; Victoria, Tasmania and New Zealand expect a return equivalent to that of a year ago. The heavy reduction is in the state of New South Wales, which, as stated in a previous paragraph, is suffering more from the drought than the other states. The following are the estimates of the best authorities of the shear of the different states:—

	1907-8. Estimated. Bales.	1906-7. Actual Bales.
New South Wales..	880,500	956,500
Victoria..	268,500	268,500
Queensland..	224,000	204,000
South Australia..	172,500	168,500
Western Australia..	44,000	42,000
Tasmania..	33,500	33,500
New Zealand..	427,000	427,000
Totals..	2,050,000	2,090,000

WHEAT CROP.

The government returns for the state of New South Wales show the harvest to have been very considerably above the early anticipation. In October it looked as if the yield was not to be much over three bushels to the acre. In November after some rains had fallen it was anticipated that it might go five bushels to the acre. The latest figures make the return at 6.2 bushels per acre, the yield having been 8,686,500 bushels as against 21,817,938 bushels of the year previously. The harvest of 1902-3 was the worst in the history of the state when only one bushel and two-tenths were obtained per acre. The yield in the other states is proportionately very much better than in New South Wales and therefore Australia will have enough for its own use and something to spare.

NEW ZEALAND.

Dry weather is reported from the wheat-producing districts of New Zealand and at the present time of writing a short crop is threatened. This may also affect the oat and potato crop to a very considerable extent. It is too early to definitely forecast what the result will be, but certainly the probabilities are that wheat and flour will require to be imported. A short oat crop might also lead to a demand for oats in October next for milling purposes for New South Wales.

APPLES.

There were imported into Australia by the Canadian-Australian steamers 19,831 boxes of apples in three shipments, the receipts being for October, 6,772 boxes; November, 8,163 boxes; December, 4,896 boxes. There were, in addition, a few boxes that came by freight steamers from San Francisco but the shipments on these slow steamers were a complete failure. Nearly all the apples arrived, apparently, in good condition. A quantity were carried on deck and where these were sound they had lost their flavour. Those carried in cool storage were prime on receipt. Some of the apples were first-class fruit, free entirely from disease and passing without difficulty. Others from California were affected with Codlin moth and had to be treated. It is stated that any future shipments affected in this way will be destroyed on arrival at this port. The apples suited to the market, especially those from one orchard in Oregon, brought high prices, varying from 15s. to 20s. per box. Those unsuited to the market brought from 10s. to 12s. per box. It is said that a few of these apples were of British Columbia origin, but of this I have no evidence and was unable to locate them. The fact that one United States shipper continues to send such large quantities of apples to this market supports the statement that I have made in previous years, that the Australian market is the most profitable market for the British Columbia grower open to him. A Canadian paper informs me that buyers were paying a very high price for shipping Ontario apples to the eastern United States. The prices there had been so high that Western United States apples were also being sent there. Nevertheless, the finest grower in Oregon found it to be still more profitable to send his fruit to Australia. The price stated to me paid for first-class British Columbia fruit was from one dollar to one dollar and a quarter per case at Vancouver, which was certainly a dollar a case less than the fruit would have brought by shipping to this market under proper conditions. There is, however, this objection to the British Columbia apple, that the average of the best fruit is too large in size, giving too few to the box. Nearly 20,000 cases of apples were disposed of at different points at the prices I have named, and more than justifies my statement, that this market would take 15,000 cases when properly handled.

SHINGLES.

Shingles are imported by the bundle and are presumed to contain a certain number of shingles, but, frequently, the number is below the reputed quantity. The customs-house authorities have ordered that the duties can be levied upon the actual contents rather than the reputed contents of the bundle.

BAND SAWING MACHINES.

A similar order has provided for the admission of band saw machinery free. This is in harmony with the expectation I had expressed in my report for last month of what would be done with machinery of this kind.

PROHIBITED POSTAL CARDS.

The postal card in which the picture is embellished with tinsel has been prohibited from being transmitted in the mails of Australia on the grounds that the particles of metal are injurious to the lungs of the postal official handling them, and also cause trouble to the stamping machinery. Canadians should not, therefore, send such cards to Australia.

THE TRADE OF NEW ZEALAND.

The preliminary returns of the trade of New Zealand show that for 1907 it was the highest in its record. The imports were £16,982,046, the exports £20,069,600, showing an excess of exports of £3,087,554. This is an increase in imports of £1,770,643, and in exports, of £1,974,463 above the trade of 1906. The trade of the past ten years has been one of remarkable growth, as the following figures for 1897 and 1907 show:—

	1897.	1907.	Increase.
Imports....	£8,055,223	£16,982,046	£ 8,926,823
Exports	10,016,993	20,069,600	10,052,607
Excess of exports ..	£1,961,770	£3,087,554	

J. S. LARKE.

APPENDIX.—Copy of an open letter by the editor of the *Australasian Hardware and Machinery* addressed to a friend about to visit England to secure agencies:—

REPRESENTATION IN AUSTRALIA.

Dear Mr. ————

1. In further reference to the conversation of to-day, you will easily realize that the question of agencies and the representation of British manufacturers has been under our observation for the last twenty-one years, during the whole of which time we have constantly come into contact with representatives of the best firms, and have had ourselves no interest, direct or indirect, in such agencies. We find that the most reliable and successful representatives of British and foreign manufacturers in Australasia refuse to undertake fresh business on a commission basis only. There may be some cases where a commission basis only is accepted. But there are very few, and we are satisfied that no good man of business would continue to act on this arrangement. As a matter of fact, it costs at the very least £500 a year to travel round Australia and New Zealand once in a twelvemonth, carrying samples. If samples are not carried, or are very light, a smaller sum is sufficient. But from £500 to £800 a year is the cost of thoroughly working Australia with a fair proportion of samples. Quite a general arrangement is that the firm to be represented shall contribute, say, £100 a year towards the expense, and then pay commission.

DESTINATION OF GOODS.

2. A second point on which the agents we have talked with are very emphatic, is that they insist on commission on all the business done with Australia, and in order that there may be no misunderstanding concerning this, quite a number of British firms have willingly agreed to allow an accountant to inspect such books as are necessary to ascertain what goods are sent to Australia. Some declare that this is not

practicable. Experience shows that it is practicable. Goods, it is true, may be sent to London shipping firms, and by them despatched to destinations unknown to the manufacturer. But in the majority of cases the goods are to be shipped to certain marks, and the representative of good standing in Australia is easily able to ascertain the shipping marks of the firms he deals with. Goods shipped to such marks should be credited to the representative.

COMMISSION BASIS.

3. If this is not done the principal is put in an exceedingly unsatisfactory position. If he only grants commission on the orders absolutely sent through the representative, that representative in self-defence must decline to show his samples to any but those firms who will pass their orders through him. That means a large number of Australian firms, who have buying representatives in London, are excluded from the business that should be done by the representative. This is unprofitable to both parties. Further than that, the representative who is showing samples on a commission basis only, is building up a trade which can be taken from him at any time. No one works with a good heart in such conditions.

AUDITING REPRESENTATIVE'S BOOKS.

4. The firms who consent to allow an accountant to go through their books, and check the commission account of the representative, are generally those of the highest standing. Just as the honest man raises not the slightest objection to his books being audited, so the firm with honest mind has no objection to disclosing details of this kind. The accountant who is to do this is sometimes agreed upon between the two parties.

ACTING UPON REPRESENTATIVE'S ADVICE.

5. Another matter which has very deeply impressed us during our twenty-one years' experience in Australia is the reluctance of the British manufacturer to accept and act upon the information reported by his representative in Australia. Indeed, this is so notoriously the case that most representatives rejoice when it is possible for a member of the firm to come out and study the ground. Where this has been done we have seen case after case where the competition, which has been eating away the principal's trade, has been met and overcome, and the entire trade recovered. The visit of a principal is necessarily a heavy expenditure. The alternative to it is, when a representative is appointed, for the principals to believe that he makes no suggestion whatever without excellent grounds. It is quite obvious that the representative will not go out of his way to get information, and take the trouble to report in detail to his principal, if there is nothing in it; and yet in too many cases the principal thinks that the representative is simply writing from carelessness and ignorance. The result of this treatment is that the representative who has worked hard and honestly for his principal becomes discouraged in the course of a few years, and finally throws up the representation of the firm, and transfers his knowledge of the trade and his experience of Australasia to some principal who is more willing to co-operate with him in building up a fine business.

SHOULD BE GENEROUS WITH SAMPLES.

6. One other point applies in some trades more than others. Too many firms are very niggardly with samples. A well-established and reliable representative ought to be able to say that he can at once place with advantage a certain number of samples, and the wise principal will send out those samples with an abundant supply of printed matter, and will be co-operative in every way with the wishes of his representative. A supply of samples, printed matter, and blocks for illustrations should be one of the primary matters of arrangement.

TRADE JOURNALS.

7. Moreover, there are in Australia, certain journals addressing their respective trades—I need not name them, inquiry will soon show which they are—which are always glad to give news to their readers of any new lines introduced. The only requirements are that the information shall be really fresh, and that suitable blocks for illustration should be supplied. Where samples suitable for illustration are being sent out, and are really new, it is a very wise move on the part of the principal to send out at the same time an electro, showing the main points of the goods, and roughly $2\frac{1}{2}$ inches square.

REPEAT ORDERS.

8. Moreover, while the active representative will call on practically every firm with whom the manufacturer would wish to do business, it must not be forgotten that repeat orders depend on the rapidity with which the goods move out of the warehouses of such firms. This depends on the purchase of the retailers, either from their own knowledge or the information given to them by travellers and salesmen. Everyone with experience knows how much it helps the traveller when the goods are already known to the buyer. The best way of ensuring this is by skilful advertising in the journal of the trade, giving just such information as will show the retailer how and why the goods are saleable. Moreover, every traveller has had the experience of standing by when some half-informed assistant is trying to sell the very lines he represents. The traveller has wished that he could put in a word and show how the sale should be effected. Advertising designed to teach salesmen the best selling points of the goods will always reach the smartest men in the trade. By reason of their being the smartest they are certain not to neglect their trade journal, or any of the advertisements in it.

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT.

(Mr. C. E. Sontum.)

CHRISTIANIA, NORWAY, GAUBBEGD, No. 4, February 4, 1908.

THE TRADE OF SWEDEN IN 1906.

The *Kommerskollegium* of Sweden has now made public a report of the trade of Sweden for the year 1906. From the report, it appears, that the total value of the imports and exports during 1906 amounted to Kr. 1,148,513,000 = \$306,270,100, of which comes on the import Kr. 644,228,000 + \$171,794,100 and on the export Kr. 504,285,000 = \$134,476,000.

This result shows, compared with the year previous, an increase in the import of about 10·7 per cent and in the export about 12 per cent. The following is a list of the principal articles of export during 1906 :—

Article.	Value in dollars.
Live animals.	\$ 1,558,958 00
Meats and pork, &c.	11,410,864 00
Grain and products therefrom.	333,693 00
Colonial goods.	217,676 00
Fruit and berries.	500,783 00
Spirits and other drinkables.	204,087 00
Material for chip-work.	128,240 00
Yarn, rope, &c.	495,798 00
Woven goods.	497,821 00

Article.	Value in dollars.
Hides, skins, hairs, &c....	2,688,949 00
Manufactures of hides, skins, hairs, &c....	53,016 00
Tallow, oils, tar, rubber, &c....	712,209 00
Manufactures of tallow and oils....	1,011,437 00
Wood, raw material, cut, sawn or planed....	45,185,832 00
Carpenterwork....	2,997,526 00
Wood pulp....	12,053,372 00
Matches....	2,671,122 00
Colours and varnishes....	67,113 00
Sundry articles from the vegetable kingdom....	153,015 00
Pasteboard, paper and manufactures therefrom....	7,262,713 00
Other manufactures from plants....	255,163 00
Iron ore unformed....	8,464,736 00
Other kinds of metals unformed....	3,280,282 00
Minerals, formed....	3,846,880 00
Metals, raw....	14,404,005 00
Manufactures from metals....	6,010,596 00
Ships, waggons, machinery, instruments....	6,748,276 00
Sundries....	1,112,283 00

I shall in one of my first reports give a list also of the different articles imported to Sweden in the above-mentioned period.

SWEDISH BUTTER EXHIBITION AT GLASGOW IN 1908.

To further increase the import of Swedish butter to Great Britain it has been resolved to hold an exhibition of Swedish butter at Glasgow during 1908, and to cover the expenses connected therewith, the necessary amount has been placed to the disposal of the agricultural association by the government.

SUGAR PRODUCTION OF SWEDEN IN 1907.

At the twenty beet sugar factories of Sweden there was during 1907 in all consumed 765,802 tons of white sugar beets, and the production for the whole year amounted to 106,547 tons raw sugar of all kinds, and 38,344 tons of sugar ready for consumption.

EXPORT OF BUTTER, MILK AND CREAM FROM DENMARK IN 1906.

According to the statistical amount of Denmark's Exchange of products with foreign countries, there was exported of Danish butter during 1906, 158.8 Mill. lbs., whilst the import of foreign butter for consumption amounted to 11.8 Mill. lbs. The surplus export, thus represents 147.0 Mill. lbs. At the same time there has been a considerable rise in the export of cream and milk and this export, a few years ago unimportant, rose in 1906 to 14.6 Mill. lbs. for cream and 11.1 Mill. lbs. for milk, this answering to 5 Mill. lbs. of butter. The cream and milk exported goes entirely to Germany. It also seemed at one time as if Germany would become an important importer of Danish butter, as in 1905 there was exported to that country 5.2 Mill. lbs. of butter in ordinary packing, in 1906 this export has gone down to 1.9 Mill. lbs. Packing in tins was employed in 1906 for the export of 4.4 Mill. lbs. Danish butter against 4.4 and 3.8 Mill. lbs. in 1905 and 1904. The greater part of the butter packed in tins goes via Hamburg or England to distant countries or is used for supplying ships.

The consumption of foreign butter in 1906 was a little higher than in 1905, 11.8 against 11.4 Mill. lbs. This consumption has on the whole kept on the same scale for several years between 11½ to 12 Mill. lbs.; on the other hand the margarine consumption, which for some years had been stagnant, has now again become active and has from 47.5 Mill. lbs. for the financial year 1904-5, Danish and foreign produce reckoned together, risen to 57.9 Mill. lbs. in 1906-7.

C. E. SONTUM.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, February 15, 1908.

NEWFOUNDLAND BUDGET.

The Finance Minister in his budget speech delivered on 11th inst, announced that the following items would be placed on the free list : School desks, hardwood plank over 18 feet in length, mast pieces of pitch pine, Oregon pine, or similar hardwood timber when imported for the purpose of ship building. Wire fencing, gates and fasteners. Motor engines when used for agricultural purposes or in vessels employed in the fisheries.

Material imported for the covering of patent flakes is placed on the 5 per cent schedule.

The bounty on canned codfish is increased to 20 cents per case of 48 lbs. Bounties ranging from \$4 to \$10 per ton are to be given on vessels constructed in the colony.

The total public debt on 30th June, 1907, is stated as \$22,793,866.67, of which sum \$422,000 is due to the Bank of Montreal on temporary loans.

PRINCIPAL EXPORTS.

The following comparative statement of the principal items of export for the years 1899 and 1907 is given by the minister :—

EXPORTS.

—	Year.	Quantity.	Value per cent.	Average price.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., February 14, 1908.

FAULTY APPLE SHIPPING.

It is a most unpleasant duty to have to write complaining of Canadian shipping methods, but several cases have been brought to my attention all tending to the same end.

Ever since I have been in Great Britain I have endeavoured to persuade Canadian shippers, particularly shippers of apples, to pay more attention to interior points here. I do not claim that there is anything particularly wrong in the system of shipping all fruit to Liverpool, London, Bristol, Glasgow, and other ocean ports, but I do contend that if Canadian exporters would devote more attention to the large inland cities such as Birmingham, Leeds, &c., they would be able to command better prices and a steadier market. With that end in view I have introduced buyers here to such Canadian fruit exporters, as have written me saying that they are prepared to do business; but I have found that there is little hope when some Canadian houses are negligent in shipping up to samples. I do not say that all shippers are alike as I know of men who have established a regular trade with Birmingham and are carrying on perhaps not a very great trade, but one that is satisfactory to both ends.

People here do not want credit. They will pay cash either before shipment, or against B.L., but they have been so badly disappointed at times that I can never hope to help establish business on that basis unless methods are greatly changed.

ALLEGED DISHONEST SHIPPING.

The particular cases which I have before me now, one in which a Birmingham 'fruit merchant' made a trip to Canada in September. He took from me letters of

introduction to a number of Canadian shippers, and met one who I considered was absolutely reliable in every way. He signed a contract (merely as a start) for 1,000 barrels of russets, 75 per cent to be No. 1, 25 per cent No. 2, price \$3 f.o.b., Montreal to be sent by December 1. There was no beating of price done. The seller asked this price, and the buyer paid without question. The buyer established a credit in Montreal and cash was to be paid on presentation of invoice and B.L. of russet apples.

The first invoice came 160 barrels of russets. When opened there were 20 barrels of No. 2 russets, and the balance talmans, snows; in fact a miscellaneous assortment, mostly No. 2's. Another 195 barrels of russets were invoiced. In this lot there were 24 barrels of russets, the balance an assortment of 23 varieties. A third shipment contained about the same proportion. A fourth shipment was refused. But in the meantime the Canadian shipper had been paid for three lots in Montreal. On the arrival of the first two lots here, seeing the way the contract was being filled the buyers cancelled the credit in Montreal after numerous cables as to why apples had been invoiced as russets and paid for as such when different goods were sent. The answer was that russets were scarce and could not be got unless with 'various.'

Why did this firm make a contract to deliver 1,000 barrels of a specified kind of apple, get his money, and put up such an excuse as this? If he could not get them why did he sell them in the first place, and if he could not get them why did he not cable and say so? In this individual case it is not the loss alone (even that is considerable as the goods were sold to arrive) but it is the uncertainty it gives in trading. Every man in Smithfield market knows about it. Many have had similar experience and nothing will make them believe that it was not intended as a swindle. It gives rise to a feeling, and many are not backward in stating that Canadian apple shippers are not to be trusted, and that as soon as they get their hands on the money they do not care what happens; that the Canadian knows the Britisher will take his loss rather than go to law, knowing that if he did win his case everything would be swallowed up in costs.

It is not fair. There are men among Canadian packers and shippers whose brands are as good as gold, and it is hard that all should be classed alike. It resolves itself down to this, that shippers will be left to the mercy of the commission men alone.

ANOTHER EXAMPLE.

Another case on much the same lines, but not so gross: 300 barrels of russets were bought and paid for in Toronto, credit being cabled for payment on presentation of invoice and B.L. Three hundred barrels were invoiced and paid for, but on arrival were found to consist of 165 russets, and the balance 'various.' The seller's excuse was that the russets were scarce, so he sent other varieties that cost him the same money. From the seller's view that seemed satisfactory; but let him place himself in the buyer's place. Here a man bought a specified variety of apple and was not even given the option of refusal of the 135 barrels. The seller had the money.

Canada is going to have greater competition in the future in fruit, and even though her apples are a higher quality than that grown by any other country she will never get the benefit of that unless the packer and shipper exercise greater care. I have seen apples sent here which for the benefit of the shipper and for Canada had much better been thrown into the St. Lawrence. If shippers would pay more attention to quality and less to quantity they would make more money. It costs just as much to send a barrel of poorly packed apples as it does one of the best, and in selling it is the quantity of slacks and poor quality that makes the price.

This is not intended as an arm-chair criticism. I know these facts, although regret to have to acknowledge it.

P. B. BALL.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

*(Mr. P. B. MacNamara.)*CANADA CHAMBERS, 36 SPRING GARDENS,
MANCHESTER, ENG., February 15, 1908.

GREAT SCARCITY OF BUTTER.

Considering the many and widely separated sources which England depends for her supplies of butter, it is remarkable that there should be such a great shortage. Butter comes to her from the continent, from Ireland, from Siberia, from Canada, from the Argentine, from the United States, from New Zealand and from Australia, but circumstances have slowly risen which have restricted the exports from all those countries. Germany's increasing demands have required much of the Danish and German butter which might otherwise have come to England; the growing population of Canada and the States have taken a great deal, if not the whole, of the produce of the two countries, in fact, Irish butter has been required to meet their needs, again reducing the exports to this country at a time between seasons when it has been of unusual importance that they should be abundant; and the weight of butter produced in both Australia and New Zealand has been greatly limited by drought. Transport difficulties and perhaps unsatisfactory organization of export methods are against the Siberian article, and the Argentine does not send a very great quantity.

INCREASING NEEDS.

But the demand for butter in this country is growing, and showed a big advance last year, when, through over-production, supplies were too heavy, resulting in a fall in prices so big that many people who ordinarily used margarine began to buy butter instead, and now when the bad time has come the stocks usually kept in cold-air stores are exhausted.

Another factor which has increased present difficulties is that many retailers even in ordinary times are content to sell butter at a price yielding little or no profit. With them it is a 'cut' line all the time, just as sugar is with many tradesmen, and as they are loath to raise prices under those conditions there has not been that reduction of demand through increased sales of margarine which might have brought some measure of relief to the market by allowing the accumulation of stocks. The shortage of money at the close of last year was also against large reserves being created.

ABNORMAL PRICES.

In the Manchester market dealers this week had a period of great excitement. Prices all around show a big increase as compared with those of last week. Danish, Swedish, Finnish and Dutch butters were on an average 10s. a hundredweight dearer, and in Australians, New Zealands, Argentines and Siberians the advance was from 10s. to 15s. New Zealand butter actually made higher prices than were paid for Danish.

There does not seem to be any likelihood of a fall in the immediate future. Merchants incline rather to the opinion that there will be another advance next week, although this week's rates were higher than any that have been known for more than a quarter century. For some odd lots of Danish butter the wholesale price paid was equal to nearly 1s. 4d. a pound, whilst the lowest quotation was 131s. a hundredweight for a few early consignments from Irish creameries.

BACON.

The present condition of the bacon market causes both merchants and retailers considerable anxiety as to the future. In the beginning of the year the killings of hogs in all countries were enormous, and more bacon was consigned to the English market than it could readily assimilate. Prices have been reduced to such a point that curers are involved in heavy losses, with the single exception of the American shipper, whose hogs have reached a phenomenally low price. The weekly killings in Denmark have ruled 46,000 to 48,000 hogs, in south of Ireland 10,000 to 12,000, whilst the aggregate killings in Chicago for the month of January attained the enormous figures of 1,113,978, at an average cost of about 4½ cents per lb. Various theories are given as to the cause of these heavy marketings of hogs, one is that financial trouble in the respective countries has caused farmers to liquidate their stock. Another is, that dear feeding stuffs have made the raising of hogs unprofitable and farmers are clearing stocks as rapidly as they can, thereby surfeiting the market. If this latter theory is correct, there will be a return to higher prices during the next few months. Canadian bacon has been somewhat in the background while this plethora of Danish has been flooding the market, and sales must have disappointed the Canadian curers. At the time of writing the market is tending up and the prospects are brighter, for the selling price is coming somewhat nearer the cost of production.

BRITISH TRADE RETURNS.

According to the Board of Trade returns, issued recently, the imports last month were £56,368,358, a decrease as compared with January last year of £4,166,488. The exports last month were £34,407,767, a decrease of £662,840 as compared with January, 1907.

P. B. MACNAMARA.

TRINIDAD AND TOBAGO.

REPORT OF COMMERCIAL AGENT.

(*Mr. Edgar Tripp.*)

PORT OF SPAIN, TRINIDAD, February 12, 1908.

TRADE OF TRINIDAD.

The year 1907 saw a revival of trade in the colony, of a generally satisfactory character. It is true that the sugar crop was short, and the shipments only 411,000 bags, against 508,000 bags the previous year, but the increase in exports of the far more profitable product, cacao, more than compensated for the shortage.

Over 40,000,000 lbs. of the 'golden bean' were shipped against about 25,000,000 lbs. in 1906, and with the value anything from 30 to 100 per cent above that of the latter year, it can be easily understood that a comparative wave of prosperity passed over the Island. It is not likely that the high price of this product will be maintained for any lengthened period, indeed there has already been a substantial fall from the extreme rates of two or three months ago, but still the industry returns probably a greater amount over and above the yearly cost of cultivation on established estates than any other known agricultural product.

ASPHALT.

One hundred and twenty-eight thousand seven hundred and forty-nine tons asphalt were sent away, against 125,562 in 1906, and 26,076 cases bitters against 20,480, whilst the small manjak exports increased from 1,177 tons to 2,114 tons. Again there was almost a record in cocoanuts, of which the number was 13,264,680.

CACAO.

It is satisfactory also to note that the new year has opened remarkably well. Forty-six thousand one hundred and thirty-nine bags cacao were exported during January, against only 16,308 in 1906.

MOTOR CARS.

I note that the manufacture of motor cars is steadily progressing in Canada. This country is specially adapted for them, having excellent roads for hundreds of miles, not, of course, in any one direction. Up to now very few cars have been imported and those only by people who have been abroad and selected for themselves. The number of persons who, apart from the labouring classes, are in a position to drive their own vehicles here is comparatively large, and if a handy, reliable, and fairly cheap machine were introduced there would be, I think, a good market for them, and the first one on the spot will get the advantage.

Saddlery, cutlery, earthenware, whisky and wines, appear amongst the articles in which trade with Canada is nill or stationary, whilst boots and shoes and leather goods do not progress as they should considering the acknowledged quality of these goods. Furniture is another article in which more trade ought to be done.

The coal bunkering trade is rapidly growing here, and is likely to continue on the upward grade. Most of it comes from United States.

At the last meeting of the Legislative Council the Governor announced that the state of the colony's finances justified proceeding immediately with the long delayed and urgently required extensions of the railway. The estimate of cost is £225,000. This will open up a wide tract of country, only sparsely cultivated at present, and add greatly to the trade and importance of the colony.

EDGAR TRIPP.

JAPAN.

REPORT OF TRADE COMMISSIONER.

(*Mr. Alexander MacLean.*)

ROOM B, 14 BUND, YOKOHAMA, January 29, 1908.

The following is a comparative statement of the value of the principal items of export and import between Canada and Japan for the year 1906 and 1907.

EXPORTS TO CANADA.

	1907.	1906.
Silk, raw.. . . .	\$ 15,378	\$406,515
Silk tissue, habutai.. . . .	195,900	303,987
Silk handkerchiefs.. . . .	91,880	140,394
Cotton tissues.. . . .	3,961	4,531
Mats and mattings for floor (Hanagoza)....	57,997	41,493
Porcelain and earthenware.. . . .	103,957	97,838
Lacquered ware.. . . .	9,049	10,606
Tea.. . . .	601,747	454,663
Rice.. . . .	266,359	144,025
Sake.. . . .	34,962	17,179
Straw-plaits and chip-braids	549	2,582
Camphor.. . . .	3,120	6,950

IMPORTS FROM CANADA.

Flour, wheat.	\$126,944	\$81,821
-----------------------	-----------	----------

The principal items given in the monthly return number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items making up the aggregate of trade the annual return has to be awaited.

FOREIGN TRADE OF JAPAN FOR 1906 AND 1907.

Imports for Year.	1907.	1906.
Food and Drink—In a natural state—		
Rice.	\$15,467,933	\$13,101,000
Wheat.	1,834,572	685,874

EFFECTS OF THE UNITED STATES BOYCOTT.

Whatever the newspapers may say, the consular reports do not make light of the boycott directed last year by the Chinese against United States exports. Within five years following the Boxer quietus, China's imports from the United States, under the influence of what is called a vigorous attempt to capture the Chinese market, increased five-fold, or from \$10,405,000 for 1900, to \$53,453,000 for 1905. In 1906, that particular trade lost \$10,000,000; and the next year's trade has advanced sufficiently to enable an estimate of \$20,000,000 to be given as the falling off for 1907. For the year ending June 30, 1907, the Chinese imports from the United States amounted to \$25,704,000, or less than half of the corresponding year previously. In the single item of American cotton cloth, consumption fell from \$25,641,000 in 1905, to 5,714,000 for the fiscal year ending with 1907. It is acknowledged, and does not appear to be in any way disappointing, that this enormous decline can be attributed only to the boycott. Doubtless, this peculiar movement amongst the Chinese is weakening; but visitors to China, and travellers generally, report that it is yet a conspicuous feature affecting the trade of the ports of the Chinese mainland.

FLOUR MILLING.

Since the collapse of the boom, with the prevalence of trade depression and financial stringency, not so much is heard of the promotion of industrial enterprise.

The milling industry with its financial and industrial incidents, has been very little heard of for some months. The subject is revived in the *Japan Times'* economical and financial columns, by the following paragraph:—

'Japan's flour milling industry has of late shown great growth and improvement, which has affected foreign imports. In the latter half of last year the demand was mostly supplied by the home product, our milling industry having effected striking development since spring last year, so that it is now in a position to furnish the market with an ample supply of flour, no less superior to the imported article.'

Apparently, by the statistics, the past year has shown a small falling off in the importation of flour from the United States and Australia, whilst that from Canada has increased by over 50 per cent. In part, the decreased importation must be accounted for by ordinary incidents of trade, such as over-stocking the previous year, and the setting in of a somewhat decreased demand in consequence of the tightness of money and the depressed condition of trade generally. Flour milling, some months ago, was the subject of a great deal of projected company formation; but the actual milling investment and operation that came out of it was quite insufficient to support the argument that flour milling has significantly increased in Japan, with a consequent decline in the importation and consumption of foreign flour. The leading flour milling investment was made in view of settled conditions within the range of Japan's influence on the mainland, in Korea, and Manchuria, and with the idea of finding a market there. Of course, there has been considerable inquiry after wheat, with the view of importation ultimately if conditions should continue favourable; and, no doubt, that inquiry accounts for some increased importation which appears for the year ending May 30, 1907, as \$1,354,653, against \$685,874 for 1906. It is probable that the tariff advantage, between the importation of wheat and that of flour, has had the effect of starting up almost every antiquated grinding concern in the country, together with some little increase or enlargements of milling facilities; and there may be more of this, if any assurance can be obtained that the tariff in favour of wheat as compared with flour would continue; but, with this uncertain element in the case, there will not be very large ventures undertaken in the way of flour milling in Japan, for a long time. The Oriental trader is conservative and cautious to a marked degree. The growing, milling, and transporting of Canadian flour may be continued under high pressure, with the assurance that the Oriental market will be open to the Canadian exporter whenever he is able to figure aggressively in it.

This view of the prevailing conditions and prospects is supported by the *Japan Times'* of current date in the following paragraph:—

'There is again talk of amalgamation among flour milling companies, namely, the Nippon, Dai-Nippon, Teikoku, Tatebayashi and Tosa mills. Negotiations for a similar purpose were going on last fall, but ended in failure. Recently, with the simultaneous inauguration of new companies and less demand for flour, the concerns mentioned have found themselves in a less remunerative condition, and hence this second proposal.'

JAPANESE EMIGRATION.

Before the Budget Committee, on the 20th instant, in answer to criticism, the Minister of Foreign Affairs said that the government recognized that the anti-Japanese agitation on the Pacific coast and elsewhere, was due to the advent in large numbers of low class labourers. He was in a position to say that the export of such labourers, to countries where the anti-Japanese sentiment prevailed, would in future be restricted by the government. With regard to Korea, and by virtue of the new treaty negotiated with that country, the Japanese government was gradually assuming diplomatic rights there; and the condition would be so far improved as to make the property and lives of Japanese people going to that country safe and satisfactory.

Later the Vice-Minister of Foreign Affairs, answering parliamentary inquiry, said that the Japanese government was taking every possible measure to dispel the so-

called 'yellow' phantom. Referring to Manchuria and Korea, he said it was the government's intention to encourage emigration to these regions. He agreed with members who said that the conduct of uneducated immigrants in foreign lands tended to bring the name of Japan into discredit; but, as it was not possible to educate emigrants before their departure from Japan, nothing could be done except to employ all lawful means of selection in granting passports, and to exhort the emigrants to good behaviour at the places of their settlement.

ATTENTION TO LIVE STOCK.

The Tokyo Horse Improvement Company, promoted last year, is reported to have been very successful. This organization was formed for the purpose of importing thoroughbred stock, promoting periodical trials of speed and occasions of national interest, such as 'the Derby,' for example. They had in view also the cultivating and dealing in high grade stock with the view of contributing to what is being done by the government towards a much needed improving of the horse in Japan. The gross income was yen 151,901.80, and expenditure yen 56,279.84, leaving a balance of net profit of yen 95,621. Of this sum yen 62,500 was distributed among shareholders as a dividend. The registered capital of this company is yen 1,000,000. Of this amount yen 250,000 only was paid up. (1 yen=50 cents gold.)

RAILWAY IMPROVEMENT IN JAPAN.

The Vice-Minister of Communication answers to parliamentary inquiry that the government's policy is to employ all possible expedition in developing and perfecting the system of state railways. The Treasury's intention is to devote 30 millions annually to this work, and an examination of the following figures make the situation clear:—

EXPENDITURES ON EXTENSIONS AND IMPROVEMENTS OF RAILWAYS.

1904-5..	Yen	8,900,000
1905-6..	"	1,820,000
1906-7..	"	10,260,000
1907-8..	"	29,593,000
1908-9..	"	33,090,000
1909-10..	"	30,180,000

The lines being in fairly good condition and extensions not urgent, it is probable that a large share of these appropriations will go for rolling stock and other plant of which there is a notable deficiency, nearly all of which will have to be imported.

JAPANESE SARDINES.

The Japan Canning Company, with head offices at Nagoya, inform this office that they are desirous to procure for their sardines in tin a trial in the Canadian market. A sample received at the same time proved to be of excellent quality, but small in size. Upon this exception being reported to them they rejoin that the criticism as to size is quite correct, but that they trust the circumstance will be only temporary as it is unusual. 'From the start to the close of the fishing season the sardine continued unusually small.' But this is 'such an unusual circumstance, unknown for many years,' that the season now approaching will enable them 'to pack with standard size, and to compete in quality and price with the European fisheries.'

It may be advisable to remark here, what I often have to say in correspondence, that the Japanese manufacturer is not usually an exporter. The great volume of trade, export and import, passes through the hands of the well-versed export and im-

port merchants, Japanese and foreign, at the shipping ports. There is a well marked and understood line of cleavage between the industrial and the commercial fields of operation in the Far East. One is greatly dependent upon the other. With the perplexities of credit and exchange, with all the other incidents of foreign trade, the exporting and importing merchant is quite familiar, while the manufacturer likely knows nothing about them. Trade with the Far East necessarily had its beginning upon this plan, and naturally continued so until it grew into a confirmed system.

It is of course becoming quite noticeable that certain industries are passing from the local and scattered tradesmen, and becoming the subject of capital investment and large-scale operation. In this case even, the efficiency with which the merchant at the ports carries on his business commands the export and import trade, and will for an indefinite future continue to do so because of the convenience and reason and strength of a system under which for a consideration he stands between the producers and customers in the Far East and the producers and consumers of the wide world elsewhere, and bears the responsibility.

It is true there is a noticeable restiveness. The Japanese 'captain of industry,' as he grows in production, grows also in money and in commendable self-importance. The time comes to him when he naturally regards the merchant at the ports as something of a parasite, that lives and it may be thrives upon him, the cost of which he over-estimates, and the value received from which he makes light of. And this tendency is a growing one; yet it must be said that it is its prospective rather than its present importance that affords the groundwork of much discussion of a nervous and apprehensive sort.

Since the foregoing was written, I clip from the current press, for the information of some inquirers in Canada, and the trade generally, the following reference to Japanese sardines on the foreign market:—

'The canned sardines of the Nagoya Canning Factory are said to be finding favour abroad. During the late fishing season over 700,000 tins were exported. The factory is now doing a good business, over ¥80,000 worth of fish having been exported this year through the Nagoya branch of the Mitsui Bussan Kaisha. This is in addition to the supplies furnished to old customers.'

FINANCIAL MEASURES.

Much more than the usual degree of interest is this year being manifested with respect to the financial liabilities of the country, and the manner of meeting them. At a meeting of the Budget Committee of the House of Representatives, on the 29th instant, a member raised the question of the legality and constitutionality of the method by which 108,000,000 yen was shown as a surplus from the estimated financial transactions of the years 1908 and 1909, now under consideration by the legislature. The Vice-Minister of Finance answered that the revenue, for the fiscal year mentioned, included 49 million yen of a surplus of military funds on hand, 47 million yen from Russia, on account of war prisoners' expenses, and 13 million yen of a surplus of general account. These sums, he said, were available and quite sufficient to cover the deficit of 110 million yen to which the questioning member had alluded, without having recourse to the increase of taxation. The Minister of Finance stated that the surplus in question, did not come about by any manipulation of accounts. Notwithstanding this, however, the increase of taxation was deemed necessary for the purpose of placing the empire's finances on a sound basis. He further stated, that the new taxation programme for the years 1908 and 1909, fiscal year, was simply based upon imposition of such indirect taxes as had a tendency to increase in proportion to the development of the country. By careful calculation, the government were assured that the indirect taxes proposed would not prove so injurious as was feared in some quarters.

PATENT RIGHTS IN JAPAN.

It is stated on the authority of the 'Asahi Shimbun (Rising Sun)' of Tokyo, that the government contemplates abandoning the principle of priority of application in granting patents and charters, and substituting the English principle of priority of claim. The paper admits 'no doubt that great abuses and flagrant violations of justice have clouded the operation of the former system.'

A flour milling company in Canada had successfully pushed in this market certain brands of flour manufactured by them. The grades of flour proved to be acceptable to the consumer here, and consequently the brands had become a valuable property. They said all along that there was no present profit on the sale of the flour at competitive prices; but the brands in question having won a place in the market, they would trust to the future for returns. They accordingly sent out to this office the papers necessary to the registration of the brands or trade marks. In due course the application was returned by the Japanese Patent Office with the information that registration had already been effected, giving names and dates.

This was a case in which the original owner of the trade marks was deprived of a valuable property, it might have been by some one who had not any right to it whatever, although in this case it was by the party who had acted as agent for the sale of the flour represented by the brands in this country, and who was therefore in a position to first appreciate their value, and who would doubtless justify upon the plea that his efficient promotion had given him the right.

In the case of mining patents for example, the 'Asahi' mentions one particular case which goes to show that a man who has spent much time and money prospecting for a mine may find, when he at last gets within sight of success, that his application for a charter has been anticipated by some one else who had kept a shrewd eye on his proceedings. It is commonly alleged among the Japanese that such miscarriages of justice are frequent in the case of mines. One need only suppose a breach of trust, immediate application for a charter, and the priority of application constitutes a valid right irrespective of all other considerations. Heretofore the system with its faults has been defended with regard to its existence in this country, by the argument that it had been borrowed with the best intention by the Japanese from other countries when they were reorganizing in respect of property and civil rights, and that priority of registration was the practice of more countries than priority of discovery or use.

SILK TRADE INCIDENTS.

The raw silk quantities exported in the course of the latter six months of the late calendar year, and the chief markets, are indicated as follows:—

	Bales.
To Europe.	23,668
To America.	45,292
Total.	68,960

The average value of a bale of silk as shipped may be put at 1,000 yen; the above quantity therefore yielding a total sum of 68,960,000 yen; or, without regard to the minor fractions of exchange, \$34,480,000.

The extent to which the Japanese are taking over leading lines of trade is a topic of much discussion. In the details of the above summarized return, four Japanese firms appear to have handled for direct export 32,615 bales. The remainder, 36,345 bales is divided amongst twenty-five foreign firms.

INCOME TAX INCREASE.

Amongst the taxation increases now under consideration by the legislature, and likely to go into effect, the matter of income tax, which heavily affects foreign residents, is about to be revised as follows:—

Income.		Tax payable.	
		Present Law.	New Bill.
Under.....	Yen 500.	Yen 10.-	Yen 8.50
Of and over.....	" 500.	" "	" 11.50
"	" 700.	" "	" 21.50
"	" 1,000.	" 34.50	" 40.-
"	" 1,500.	" "	" 50.-
"	" 2,000.	" 39.10	" 60.-
"	" 3,000.	" 46.-	" 72.-
"	" 4,000.	" "	" 84.-
"	" 5,000.	" 60.-	" 97.-
"	" 7,000.	" "	" 110.-
"	" 10,000.	" 75.-	" 125.-
"	" 15,000.	" 94.50	" 140.-
"	" 20,000.	" 116.-	" 155.-
"	" 25,000.	" "	" 170.-
"	" 30,000.	" 139.50	" 185.-
"	" 40,000.	" "	" 200.-
"	" 50,000.	" 170.-	" 215.-
"	" 60,000.	" "	" 230.-
"	" 70,000.	" "	" 245.-
"	" 80,000.	" "	" 260.-
"	" 90,000.	" "	" 280.-
"	" 100,000.	" 203.50	" 300.-

Incomes from labour are to be allowed an exemption of 70/100, and from labour and property combined 85/100.

At a meeting of some seven hundred representatives of the 'Business Men's Guild,' held at Tokyo, to protest against the taxation measures now proposed by the government, the following resolution was passed:—

'We believe it most urgent at present to relieve the economic situation by a readjustment of the national finances and to cultivate the national resources by reforming the tax system. From this conviction we deem the increase in taxation or the imposition of new taxes prejudicial to the development of industry and commerce and the progress of the national destiny. For this reason we hereby solemnly declare that we shall refrain from electing, as our representatives in the House of Representatives, men who act contrary to these convictions.'

The government has the responsibility of providing for the demands upon revenue of the public debt, of late enormously increased, and at the same time providing also for the increasing general expenditure; and it does not appear that any other rational plan than that of taxation has been submitted, although there is much agitation.

THE GOVERNMENT STEEL FOUNDRY.

In the sub-committee of the Budget Committee of the House of Representatives, the director of the government steel foundry, replying to a question on the present and future prospects of the institution, said that 'experience was the principal factor in the steel foundry work. The operatives needed about ten years' training in their work, and the difficulty of obtaining trained operatives was greatly felt in Japan. During the late war the foundry was extended, and wheels for railway cars, telegraph wires, &c., were now turned out at the works. The steel foundry was unlike profit-making enterprises, its primary object being to make the country independent for its supply of military and naval equipment. For this reason some loss must be tolerated. This was especially the case when a quantity of diverse warship material was to be manufactured. In the foundry all the material for building the cruiser *Ibuki* was first manufactured, and the building material for two battleships was now being produced. The cost of raw material showed a gradual rise, and this was also the case

with the price of coal, cost of transportation, and wages. In iron, Japan had to compete with the foreign product on the basis of the minimum price ruling in Germany and the United States. In was therefore unavoidable that the business should be carried on at a considerable loss. In order to mitigate loss, the foundry must have its own coal mine. On the completion of the present work, the daily output of cast-iron was estimated at 450 tons, and thus about 130,000 tons of various kinds of steel material could be estimated for the year. This would, however, be still insufficient to meet the demand. Five tons of coal on an average were needed to turn out one ton of steel.

The best coal used in Richmond, U.S.A., cost about \$1.50 per ton, and $\frac{1}{2}$ of a ton of coke was sufficient to turn out one ton of steel, whereas in Japan 1.2 to 1.3 ton of coke was needed. Present coal was quoted at 5.75 yen to 9.50 yen per ton. Coal at 4 yen to 5 yen, was inferior and unprofitable. The output of the coal mine belonging to the foundry was small and insufficient. There was no prospect of the price of coal decreasing. The foundry had under consideration purchasing coal mines, but it was at present impossible to effect the purchase in view of the abnormal rise in price since the late war. The iron ore was obtained from the Taipeh iron mine in China. The government had under consideration various schemes for obtaining a supply of ore, but the time was not ripe to disclose the schemes. The iron foundry business was fully protected in the United States and other countries, and the low import duty prescribed under the Conventional Tariff of this country made competition with imported iron impossible.

'For instance, rails for use in the United States were quoted at \$28 per ton, and cost the Seoul-Fusan Railway Company only \$27 delivered at Chemulpo, in Korea. Under the circumstances, it was necessary to raise the present tariff (2.17 yen) to about 15 yen, the rate now imposed in the United States. Until the operatives had been thoroughly trained, and the import duty revised, it was absolutely impossible to run the works without a loss.'

It may be appropriately remarked that in this part of the Orient government ownership is as popular, as inefficient, and perhaps as unprofitable as anywhere in the world. In this case it is a government enterprise, strange as it may appear, that is calling for tariff assistance in the placing of a bar to foreign trade in order that the great contingent who look to the iron foundry and the rolling mill for their raw material may have incidentally to pay more for it. The great contingent have yet to be heard from.

ALEX. MACLEAN.

BRITISH TRADE IN CANADA.

EXHAUSTIVE REPORT BY MR. R. GRIGG, SPECIAL COMMISSIONER OF THE BRITISH BOARD OF TRADE.

The 'Report upon the Conditions and Prospects of British Trade in Canada, by Mr. Richard Grigg, Special Commissioner of the Advisory Committee to the Board of Trade on Commercial Intelligence,' has just been published by the Commercial Intelligence Committee of H. M. Board of Trade, and is distributed as Parliamentary Paper Cd. No. 3868.

Mr. Grigg began his work in Canada in September, 1906, and completed it in May, 1907. Mr. Grigg travelled extensively from the Atlantic to the Pacific, spending much time in the larger commercial centres, while not forgetting the agricultural and mining districts. His report is perhaps the most interesting and exhaustive ever published upon trade conditions in Canada from the point of view of the British exporter. Mr. Grigg acknowledges with great emphasis the strong feeling of friendship for the Mother Country which he found throughout the commercial community in the Dominion.

DESIRE TO BUY BRITISH GOODS.

In his letter of transmission to the Right Honourable the President of the Board of Trade, he states:—

"Among all classes in Canada there undoubtedly exists a strong desire to buy goods from British sources whenever possible, and this desire is reflected in the Tariff preference on British goods, amounting approximately to a reduction of 33½ per cent. on the Tariff enforced upon competing foreign goods. The fact that His Majesty's Board of Trade had instituted an inquiry, and had decided to appoint correspondents to furnish regular information to its Commercial Intelligence Branch was received with marked approval as indicating a desire on the part of the Home Government to promote closer commercial relations with Canada."

MUTUAL BONDS OF UNION.

Before leaving England, Mr. Grigg had visited some of the larger Chambers of Commerce, and after his tour throughout Canada he states:—

"I found everywhere, on both sides of the Atlantic, a keen desire, both on patriotic and business grounds, to better understand differing points of view, and to draw closer the bonds of commercial union. I have sought to disregard the opinions of persons in both countries who complain ignorantly and unreasonably; but for every one such person I have met ten who are able to make reasonable allowances for differences of standpoint, and honestly desire to understand the other side. I think the feeling in Canada may fairly be described as one of surprise, and even impatience, that, notwithstanding the advantage of preference in Tariff and preference in good will, British goods are not sold in larger quantities to Canada than import figures show. The belief prevails that British manufacturers and merchants are what has over and over again been described to me in the words 'too conservative,' a phrase which I fear was meant to convey reproach in words which should not seem discourteous to British ears."

SHOULD VISIT CANADA.

Notwithstanding the excellent commercial service which is furnished on both sides of the Atlantic, Mr. Grigg is of the opinion that British merchants should visit Canada in person. His remarks upon this subject are as follows:—

"If British industry is to claim its fair share of the market due to the great and certain development of this vast and wonderful country, it will be necessary for heads of firms themselves to visit Canada, and in such a visit not to be content with a trip to Toronto, or even Winnipeg, but to see the great west in such a way as to realize in some degree what its future trade must be. To send a son or nephew not long from school on a trip to Canada, which is designed to combine pleasure, education and business, is admirable so far as the two first objects are concerned, and useless or worse than that, as regards business. The men who go out for business purposes should be thoroughly competent, and able to speak with sufficient authority at home to command attention for the lessons they learn. The Americans (this term is used to describe the citizens of the United States in the absence of any more distinctive word), with their usual acuteness, have been quick to realize the certain future of Canada, and have had the advantage of an efficient commercial consular service."

INCREASING POSSIBILITIES IN CANADA.

Again he says:—

"It was often suggested to me in Canada that British traders, in view of the vast total of their export trade as a whole, shown in the astounding figures issued by H. M. Board of Trade, are inclined only to look at the comparatively small dimensions of Canadian trade at the present time, and, failing to realize the size of the future market and the certainty of its rapid development (a development which will probably outstrip the productive powers of the country), to consider Canadian business hardly worth fighting for. This was often held to account for an apathy which could not otherwise be explained, and Canadians never fail to point out that it is not *always* high tide, and that the time is perhaps not far distant when the Canadian market, both because of its own increase and because of the possible decrease of the demand in other markets, must assume greater importance for British trade; and the question is, surely worth consideration whether the British manufacturers and merchants should not strive to improve their position in the Canadian market in good times, as a preparation for maintaining it in bad times,"

Though there is a vast amount of information in Mr. Grigg's report of interest to British exporters, there is also much information of interest for the average Canadian business man, inasmuch as it deals with subjects of common interest, and opinions are expressed which are of value to the commercial community the world over.

COMMERCIAL CORRESPONDENCE.

One of the principal objects of Mr. Grigg's mission to Canada was to report upon the advisability of appointing Commercial Correspondents in Canada to offset the very great advantage possessed by all foreign countries in the world who have established Consular Agents in the Dominion. Upon this he states:—

"Finally, there is undoubtedly a need for what may be called national trade representation in Canada. There can be no question as to the substantial services which have been rendered to the United States trade as a whole by the Consuls who are scattered throughout Canada, at present the United Kingdom is totally without any such representation. Consular advice and information can never take the place of efficient trade representation, but unquestionably, if the right men are available, it can render substantial service, and it is generally believed in Canada that such service has been done to the trade of the United States by its Consular

"representatives in the Dominion. The appointment of British Consuls in the "ordinary sense of the term, in Canada, is obviously unnecessary. What is generally "felt to be desirable is the appointment of competent commercial representatives, "who, not having to deal with much of the ordinary work of Consuls, who have the "more time to devote to the trade interests of the country which they represent. The "appointment of Commercial Correspondents such as is now contemplated by the "Board of Trade, is welcomed as an important step in the right direction, and a pro- "ceeding likely to be ultimately of substantial advantage."

SUMMARY AND CONCLUSIONS.

He closes his summary and conclusions by stating that much can be done to promote British trade with the Dominion by:—

"(a) The promotion of rapid and cheap transit and communication between "the United Kingdom and Canada."

"(b) The more careful study of Canadian conditions by British traders."

"(c) Improvements in the representation of British merchants and manufactur- "ers in Canada."

"(d) Greater adaptability and exactness in meeting the wishes of Canadian "buyers."

"(e) The adoption of Canadian standards, weights and measures and currency, "for specifications and price quotations."

"(f) Better advertising and catalogues and cheaper postage rates."

"(g) More elasticity in terms of credit (rendered possible by fuller knowledge "of local circumstances."

IMPORTS INTO FRANCE 1906, UNDER FRANCO-CANADIAN TREATY.

STATEMENT showing Fixed Valuation, French Maximum and Minimum Tariff with Ad Valorem Equivalent, Imp rts (by Countries) into France for Consumption during the Year 1906, with Duty Collected thereon and Average Ad Valorem Rate upon those Articles mentioned in Schedule 'A' of Convention between Canada and France, signed at Paris, September, 19, 1907.

TARIFF CHANGES

BRITISH SOMALI COAST PROTECTORATE.

ORDINANCE NO. I. OF NOVEMBER 21, 1906, ENACTED BY HIS MAJESTY'S COMMISSIONER FOR THE SOMALILAND PROTECTORATE, IN REFERENCE TO THE IMPORTATION AND SALE OF POISONS.

It is hereby enacted as follows:—

1. For the purposes of this Ordinance the term 'Poisons' shall mean such articles as may be comprised in the schedule hereto, provided that His Majesty's Commissioner and Commander-in-Chief (hereinafter referred to as the Commissioner) may, by public notification, at any time, add any article to the schedule.

2. It shall be unlawful for any person to import, sell, or keep open shop for selling by wholesale, retailing, dispensing, or compounding poisons, unless such person shall hold a license issued under this ordinance by the Commissioner, or such officers as may be designated by rules made under this ordinance.

9. This ordinance may be cited as the 'Sale of Poisons Ordinance, 1906.'

SCHEDULE.

Arsenic and its preparations,	Morphia and its preparations.
Cyanide of potassium and all metallic cyanides.	Opium and its preparations.
Strychnine.	Nux vomica.
Corrosive sublimate.	Prussic acid.
Oxalic acid.	Calabar bean.
Tartar emetic.	Coculus indicus.
Aconite.	Datura.
Belladonna.	Ergot.
Chloroform.	Henbane.
Cocaine.	St. Ignatius bean.
	Cantharides.

TERRITORY OF SARAWAK.

CUSTOMS NOTICE NO. 66, DATED DECEMBER 21, 1906, MODIFYING THE EXPORT DUTIES ON CERTAIN ARTICLES.

(*Sarawak Gazette* of January 4, 1907.)

From January 1, 1907, and until further notice, duties upon the undermentioned articles will be as follows:—

	\$	cts.
Fish maws, No. 1, per catty	0	20
Fish maws, No. 2, per catty	0	15
Fish maws, No. 3, per catty	0	10
Gutta jangkar, per picul	1	50
White pepper, per picul	1	25
Black pepper, per picul	1	00

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent also for New Zealand.
D. H. Ross, Stock Exchange Building, Melbourne.

BRITISH WEST INDIES.

E. H. S. Flood, Barbados, agent also for the Bermudas and British Guiana.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Club Hotel, Yokohama, Japan.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

P. B. Ball, Rooms 39 and 40, Central House, Birmingham.

J. B. Jackson, cor. of E. Parade and Greek Streets, Leeds.
P. B. MacNamara, Canada Chambers, 36 Spring Gardens, Manchester.
W. A. MacKinnon, Sun Buildings, Clare Street, Bristol.

JAPAN.

Alex. MacLean, No. 14 Bund, Room B. Yokohama.

MEXICO.

A. W. Donly, Apartado, 91B, Mexico, D.F.

NEWFOUNDLAND.

E. O'Kelly, 44 Dawson St., Dublin.
Malcolm McIntyre, 35-37 St. Enoch Sq., Glasgow.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

(Mr. W. A. MacKinnon.)

BRISTOL, February 29, 1908.

CANADIAN VISITS TO BRISTOL.

Bristol and its port of Avonmouth have been favoured during the last three years with frequent visits from distinguished Canadians. We have had Sir Wilfrid Laurier and Hon. L. P. Brodeur, representatives of the Canadian Manufacturers' Association, colonial delegates to the Chambers of Commerce of the Empire, the Royal Canadian Grain Commission, the Canadian Dairy Commissioner (twice), and last December the Hon. Clifford Sifton.

MONTREAL HARBOUR COMMISSIONERS.

The most recent of such visits was that of Major G. W. Stephens, President of the Montreal Board of Harbour Commissioners, who was accompanied by Mr. F. W. Cowie, chief engineer. These gentlemen were entertained by the Lord Mayor and the Chamber of Commerce; they made a careful inspection of the accommodation at the old Bristol city docks, and at the new King Edward dock at Avonmouth, and got into touch with many of our leading merchants, importers and exporters. This enabled them to gather much valuable information as to the prospects of trade between Montreal and Bristol, and to get a clear understanding of the facilities which are afforded by rail, river and canal for conveying trans-atlantic goods from Avonmouth to inland points in all directions.

VALUE OF OFFICIAL VISITS.

Since each of the occasions mentioned has been accompanied by one or more social functions, there may be those who would regard them as having merely a social value, but I wish to emphasize the importance of these events and their effect upon the ultimate development of Canadian trade. There is nothing more essential for such development than the personal acquaintance of those who control the situation on one side of the ocean with the leaders of commerce on the other side. The personal factor is often sufficient to turn the scale, either in matters of trade or transportation; and though results may not be immediately apparent, there is little doubt but that history will accord great credit to those who have been responsible for bringing about these many important meetings, among whom none has been more prominent, or more energetic, than the president of the Bristol Chamber of Commerce. I have emphasized this phase of Bristol's commercial life in recent years, because I believe there are cities and towns in Canada which might well adopt similar means for making known in useful quarters their facilities, advantages or manufactures.

DECLINE IN THE PRICE OF COAL.

In my report of October last (Monthly Report, October, 1907, page 1157) a fall in the price of Welsh coal was foreshadowed, but the decline has been sharper and more sudden than was anticipated, and recently the coal market has been practically at a standstill. The following figures serve to illustrate the fluctuations of the last few months in steam coal; the 'top price' in the figure which prevailed during the recent boom.

Coal.	Top price.	January 1-08.	February 8-08.	February 24-08.
	s. d.	s. d.	s. d.	s. d.
Steam—				
Best Admiralty.....	22 6	19 0	16 9	16 6
Second ".....	20 6	18 0	16 3	15 6
Ordinary Drys.....	17 0	18 0	15 9	15 0
Semi-Bituminous—				
Black Veins.....	19 3	17 9	16 0	15 3
Western Valleys.....	19 0	17 6	16 0	14 6

CAUSES OF THE DECLINE.

It may be assumed that a combination of causes has brought about this remarkable result. There has been a marked falling off in the foreign demand, the shipments from Cardiff having shown a decrease of nearly 163,000 tons from the month of January, a drop of 12.5 per cent as compared with the previous year. The supply has exceeded the demand, so that some temporary stoppages have occurred at the collieries. Local market influences have also been at work, notably a great restriction in the business done with middlemen, whose 'bear' tactics have been strongly resisted by the collieries. One result of the fall has been the cancellation of many important contracts. There is little prospect at the present moment of a return to healthy conditions in the immediate future.

THE APPLE TRADE.

At a time when so many complaints are heard with regard to the quality, grading and marking of Canadian apples, it is a pleasure to quote figures showing that there is another side to the story. The Cardiff market report, dated February 22, is as follows:—

Canadian apples—

Baldwins.. . . .	18s. to 21s.
Greenings.. . . .	17s. to 24s.
Kings.. . . .	22s. to 28s.
Spies.. . . .	18s. to 21s.

American apples: About 3s. per barrel less average.

It is evident that whatever reasonable grounds may exist for complaint regarding Canadian fruit, it is still far and away superior to all competitors.

W. A. MacKINNON.

BARBADOS.

REPORT OF TRADE COMMISSIONER.

(Mr. E. H. S. Flood.)

28 BROAD STREET,

BRIDGETOWN, BARBADOS, February 29, 1908.

WEST INDIES INTERESTED IN CANADA.

The interest awakened throughout the West Indies in Canadian affairs, particularly among the mercantile classes, is very pronounced at the present moment, and should be taken advantage of by our manufacturers. Canadian commercial travellers would be likely to receive a good hearing, and have a better chance of getting orders than at any time in the immediate past, hence they should be sent down with their samples as early as possible. Here as elsewhere, business houses do not desire to change their accounts and purchase in new quarters unless for substantial reasons, but the feeling in favour of Canadian reciprocity, and the hope that in the end closer trade relations will be of real advantage to the West Indies, would have a great weight in inducing them to place orders for Canadian goods that would otherwise in the ordinary course go to American houses.

CLIMATE OF THE WEST INDIES.

One of the causes which has apparently deterred Canadian firms sending their travellers to the West Indies, is the quite erroneous opinion as regards climate. With the exception of the months of August, September and October, which are rainy and a little warmer than the other months of the year, the heat is not greater nor so oppressive as in New York, and not greater than parts of Ontario in summer. Some of the islands of the West Indies, particularly Barbados, claim 'the finest climate in the world,' and with much ground for such a claim. The 'terror of the tropics,' may be a real terror when thinking about travelling in India, but it ought not to exist as regards the West Indies, where the heat is always tempered and kept quite bearable by refreshing breezes from the ocean, and health conditions are generally favourable.

ENGLISH AND UNITED STATES TRAVELLERS.

At the present time, quite a number of commercial travellers, representing English and United States firms, are in the islands with their samples. They are as a whole, men of superior class, fine looking, gentlemanly and of good address. Canadian firms wishing to open up business and take advantage of the feeling now existing towards Canada, would do well to remember that good manners and a pleasing address in a salesman, will accomplish more in the end here, than a more forcible but less agreeable style. United States firms having good business connections are holding their business by attending to the wants of their customers in matters of detail. They are careful to put up their goods in packages and weights, that may find the readiest sale.

SUGGESTIONS TO CANADIAN TRAVELLERS.

Canadian firms will require to study these details more than they have formerly, as there is a complaint that Canadian business is neglected in this particular. A

salesman who wishes to increase his business, and make it permanent, will be successful in proportion to his care in acquiring an intimate knowledge of the special requirements of each particular island, and endeavouring to meet them. Firms wishing to send their travellers to the West Indies, with samples, may do so at any time of the year without discomfort to the representative, except perhaps in August, September and October. Leaving Canada in November the traveller might remain till July. The English and United States firms keep their representatives on the ground about three or four months, and some of these travellers carry more than one line of samples—the English traveller in particular carrying several lines and remaining about four months. Fair hotel accommodation at reasonable rates with sample rooms in the business section of the towns may be found everywhere. The traveller will find no difficulty in getting from one island to another, as there are several lines of steamers touching the various islands, and no vexatious delay may be anticipated.

BARBADOS THE BEST BASE FOR TRAVELLERS.

The best base for a traveller would be Barbados. All the steamship lines touch at Barbados (which is the headquarters for the Royal Mail Steamship Company) going south and returning. At Barbados, a traveller might remain for a short time going to Demerara, thence to Port of Spain in Trinidad returning to Barbados. He might then reach the smaller islands to the north, by means of the steamers on the Pickford & Black line. These steamers remain one whole day at least at each of the islands, which would give sufficient time to do any business required. Returning to Barbados, he might then go to Jamaica, thence to Halifax or New York. If trip is begun from Halifax by the Pickford & Black line, one day is usually spent in Bermuda going down, and one returning. After the traveller has made his first trip to the West Indies, he could then change his itinerary to suit the needs of his business.

Travellers calling at the office of the Canadian Trade Commissioner would be assured of a courteous reception. They might also have their letters addressed in care of this office.

E. H. S. FLOOD.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., March 6, 1908.

FUEL ECONOMY.

A demonstration has been recently given here of the Smallwood Patent Core, which is the invention of Mr. Alfred Smallwood, of Smethwick, Birmingham. The general principle of the company's system is to make the flame and hot gases from the firegrate traverse firebrick passages or combustion chambers, under a boiler or around a furnace, as the case may be, rendering these firebrick portions reservoirs of heat. The company has been in existence about two years, and has supplied furnaces for various industries, including armour-plate making, cycle tube heating, the brass trade, the pottery trades, and other industries, besides altering boilers to their system for steam-raising purposes. The Smallwood Patent Core is a cast-iron tube or core, lined with firebrick, and inserted in the boiler flue. The hot gases from the fire go once through the centre of the core, once along one side of it, and then down the other side. The core or tube soon becomes red hot. A crescent-shaped division bar is provided, which runs along the top of the core outside it, keeping the hot gases to their proper course.

CONSTRUCTION OF FURNACES.

The furnaces are constructed with special combustion chambers and heat passages. The Incandescent Heat Company claim to save, compared with ordinary boilers and furnaces, between 25 and 50 per cent of fuel. The system has been adopted for armour-plate cementation furnaces by Messrs. Williams, Beardmore & Co., of Glasgow, and also by John Brown & Co., of Sheffield; likewise by the Hunslet Engine Co., of Leeds, for re-heating locomotive boiler plates. Messrs. John Brown & Co. have found that, with this furnace, they can do the same amount of work with 3.25 tons of fuel as was done previously with 20 tons; and Messrs. Beardmore have used only 7.25 tons for work which previously required 30 tons. The uniformity of heat and the smokelessness are also remarkable.

P. B. BALL.

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT,

(Mr. C. E. Sontum.)

CHRISTIANIA, NORWAY, GAUBERGD No. 4, March 3, 1908.

THE LUMBER MARKET IN SWEDEN IN 1907.

(Translation from a report by the Norwegian Consul at Sundsvall).

The expectations of the lumber dealers for the year 1907 as a record year for high prices and large profits, were not, unfortunately, fulfilled. January and February brought a lively inquiry for all kinds of lumber, and large sales to France and Spain were made, while the sales to England were smaller, as the building in that country was more limited. During March, April and May only few contracts were made, but the prices still kept firm. June also passed without any improvement, and consequently the sellers commenced reducing their prices and from that time the first price-fall may be reckoned. The buyers, however, still kept back and from August lumber was offered at steadily sinking prices. Some of the shippers were also obliged to sell as the stringent money market did not allow them to wait over winter.

The exporters who did not have their own forests and who had bought their lumber at the high prices during the first part of the year, suffered quite considerable losses. With the decreased export it is to be expected, that the stocks on hand at the opening of navigation for 1908 will exceed that of the previous year at the same time, and as the consumption on account of the foreign high rates of discount it is probable that the buyers will try to press the prices down. The sale of planks, which for a longer period has been rather slow, went up considerable during 1907, as the prices from the start were rather moderate. South Africa and Spain imported large quantities and the London market also used quite a good deal.

Exceptionally high prices were obtained for staves of all kinds, especially staves for cement barrels were paid well. For split-wood of which the larger part goes to London, where it is used for case materials, also high prices were paid. Several saw-mills in Northern Sweden now start case factories, whose production is intended for export to England.

IMPORTERS OF STOCKHOLM.

'Stockholm's Import and Export, 1907,' is the name of a statistical publication recently issued at Stockholm. The publication, which embraces about 170 of the principal import and export articles of Sweden, may be of quite considerable interest to the Canadian exporters, as under each article are given the names and addresses of the largest importers. The price of this book is Kr. 10.00—\$2.67.

INDUSTRIES OF NORWAY IN 1907.

Those branches of the Norwegian industries that work entirely or mainly for the home markets have been during 1907 very well occupied. This refers more particularly to the shipbuilding yards and the engineering firms. In most branches, however, the manufacturers have had to contend with exceptionally high costs of nearly all kinds of raw materials and fuel, and wages have risen. The net monetary result of the year's working may not be, therefore, so good as might have been wished, but taken on the whole the proprietors have reason to be satisfied. The same tendency to enlarging the factories, to improve the machinery and generally to give the works a better technical arrangement, which has been a characteristic of the Norwegian industries for some years past has been very pronounced also in the current year.

MATCH INDUSTRY OF NORWAY IN 1907.

The Norwegian manufacturers of matches have had a satisfactory year. The demand has been good, but the prices have not been proportionate with the higher cost of raw materials in some of the importing markets. In England the price has declined owing to strong competition from countries where the cost of labour is much lower, while the rate of wages has risen during the year in the Norwegian manufactories.

The production of matches in Norway has been about stationary during 1907, but in 1908 it will be much greater than before. Nitedals Tændstikfabrik will shortly start its new factory at Grønvold, Østre Aker, by the side of the old factories of the firm, and Bryn Tændstikfabrik, which was partially destroyed by fire in November, 1906, has been rebuilt and somewhat enlarged.

CITY TRADE BRANCH.

REPORT BY CANADIAN REPRESENTATIVE.

*(Mr. Harrison Watson.)*73 BASINGHALL STREET,
LONDON, E.C., ENG., February 29, 1908.

CHEESE TRADE.

During the month we received a letter from a correspondent who stated that he was acting for several cheese producers in a district of Ontario, who were dissatisfied with the existing methods of shipping their cheese to Great Britain through Canadian commission houses. This correspondent outlined a scheme which, in the opinion of those whom he represents, would mutually benefit the cheese producers and British buyers by establishing more direct communication and by eliminating the element of speculation and various other features which at present are the cause of frequent misunderstanding.

The main point of the scheme is that a union of cheese factories should be formed, the output of which would be controlled and supervised by a board selected from representatives of these factories, under whose advice the cheese would be weighed, graded as to quality and sold according to advice received from the trade in Great Britain; weights registered would be low enough to permit of shrinkage, and the cheese would be held in factory until properly cured and then carefully assorted as to quality and shipped direct to United Kingdom buyers; in other words, the establishment of direct trade between the actual Canadian producer and the United Kingdom buyer, with the elimination of the Canadian middleman.

The project resembles to some extent the co-operative system of fruit selling which has been adopted to a considerable degree in Canada, more particularly for domestic trade, and which is stated to have met with considerable success.

Our correspondent requested that we would endeavour to obtain the opinion of the London trade in respect to this matter, which they considered to be of the greatest importance to their interests, and although there is no reason to suppose that any general dissatisfaction exists, as far as this market is concerned, with the present method of conducting the trade in Canadian cheese, I took steps to endeavour to obtain the views of some of the large produce importers on the subject. I accordingly consulted the secretary of a London produce association, which includes in its membership many of the leading cheese houses, and that official kindly offered to circulate copies of our correspondent's letter among a number of his members and to furnish me with a selection of copies of such replies as were received, the identity of the writers being in all cases omitted.

As might be expected, the weight of opinion is unfavourable to the proposed alteration, because business generally is conducted through the Canadian commission and shipping houses, and apart from the fact that many of the large importers do their business through Montreal shippers who in some instances are their agents, the natural tendency is to leave well alone. However, as the matter is of some interest, I have reproduced a selection of extracts from the letters, thinking that the views expressed may be of interest to other Canadian cheese producers, besides those upon whose behalf the enquiry was actually undertaken.

Extract from Letter No. 1:—

'We have your favour referring to a proposed combination of cheese factories in Canada, the object being to bring about a closer relationship between cheese producers there and consumers here. This we think could be best brought about by the appointment of a good firm of importers on this side as agents for the sale of the cheese producers, and thus eliminate the troubles to which the makers are subjected in Montreal, and also reducing the speculative element there. For various reasons (principally financial) it would, we think, be impossible for the makers to get into closer touch with the actual consumer, or to work the business more satisfactorily to themselves, than in the way we suggest. The distribution of the cheese could be undertaken at a fixed commission so that the factories would receive the full benefit of the market here without the middleman's profit in Canada having to be allowed for. Such agents could readily instruct the makers from time to time as to the probable requirements of the trade, and thus have produces the quality, colour, &c., of cheese most likely to be in demand.'

Extract from Letter No. 2:—

'I am in receipt of yours of the 30th ult., enclosing copy of a letter received by you from the city representative of the High Commissioner for Canada, the writer of which propounds a scheme under which he suggests it would be possible for the Canadian cheese producers to carry on a more direct trade with Great Britain and that to the mutual advantage of both 'producer and consumer.' He evidently desires to put an end to the so-called 'middleman' in Canada or to so control him that he shall no longer be permitted to commit 'fraud, irregularity or manipulation.' By the way it would be interesting to know the nature of these 'frauds, irregularities and manipulations' our friend is so concerned about, and whether the British buyer whom he is so anxious to protect is not still capable of taking care of himself and distinguishing between the honest trader and the rogue. I am no lover of combinations at all, and most certainly do not favour the suggested one, but would rather advise our friends, the factorymen, to devote their surplus energies to the task of producing, if possible, still a better article, and having done so not to depreciate it by shipping out of store before it is ready for shipment, and also as far as it is in their power to do so, see that the buyer is treated fairly as regards the weights. The laws of supply and demand must, as in the past, regulate the price, and the experienced buyer will continue to see he gets the quality he desires to have or be very quick in seeking an explanation as to why he has received something else.'

Extract from Letter No. 3:—

'After carefully perusing the copy of the letter which you have been good enough to send me from the city representative of the High Commissioner for Canada, I can only make one suggestion and that is, that if the cheese makers are not satisfied with the present method in which their produce is handled in Canada, they should certainly form a union of factories, and ignore prices paid in Montreal entirely, consigning the goods for sale to a first-class cheese house on this side; the same cheese house, on an agreement with the suggested union, undertaking not to operate in cheese to the detriment of the said union. In any case, I do not think that the Canadian maker is going to do very much better than he has done the last two years; but of course it is very probable that the big buying combinations may combine for lower prices instead of fighting one another, as during the past two years, and this is what the Canadian factories will try and be independent of.'

Extract from Letter No. 4:—

'There is no doubt at all that the marketing of produce that is intended for distribution to retailers in this country cannot be more economically carried out than through reliable commission houses, and if the Canadian farmers get full market

price all the time, less a minimum amount of commission for distributing purposes, they are getting as near the actual value of their goods as it is possible for them to do. If, on the other hand, they are content to market their goods through speculators who can 'rig' markets one way or the other, we can hardly imagine that in the end this is good for the producer. We can, however, realize that it will be a big matter to get the Canadian farmers to co-operate together for the marketing of their produce, but we should very much like to see it come into existence.'

Extract from Letter No. 5:—

'We have given the enclosure our mature consideration, but cannot see the benefit to accrue from same.'

BUTTER.

Butter has remained the outstanding feature of the produce market. Owing to an almost universal shortage of supplies, prices have steadily advanced for some time past, but probably reached their highest level during the early part of February, when the finest Danish and Australian were quoted in the wholesale trade at from 148s. to 152s. per cwt. (112 lbs.)

A curious feature has been the fact that retail prices responded but slightly to this advance, and for several weeks many large establishments were retailing butter at an actual loss. This can be accounted for partly by the keen competition between prominent retailers who feared losing their customers and realised that as soon as butter passed a certain figure, there would be a large decrease in its consumption, and partly to the fact that a considerable proportion of the population would turn to margarine and other butter substitutes.

Within the past week or so the situation has culminated and wholesale prices already show a substantial decline, although quotations remain at an exceedingly high level.

An object lesson to be derived from the situation is that in a country like this, which has to sustain an immense artisan population, prices in the necessaries of life are to such an extent recognized standards, that the moment the cost of any particular article of food is raised to a marked degree, many people either abstain from purchasing it, or temporarily buy some cheaper substitute.

CIDER.

In connection with some enquiries which were made for an Ontario producer of cider who wished to get into touch with firms on this side who would be prepared to purchase supplies of apple juice for blending and other purposes, it is stated that Canadian shippers are considerably handicapped in competition with American producers in having to pay during the winter months the necessarily heavy cost of inland transportation between Ontario points and Canadian shipping ports. The winter season is the time when importers chiefly require supplies. It is difficult to see how this is to be overcome, in so far that many of the American cider-producing districts are comparatively close to sea ports which are open all the year round, unless Canadian shippers also utilise American ports during the winter. Incidentally, it may be mentioned that there seems to be a considerable demand for imported cider this season, owing to the light crop of apples last autumn in the United Kingdom and on the continent. Several importers would apparently welcome Canadian supplies if they could be laid down here at a price to compete with United States quotations.

I recently had a conversation with one of the principal English cider manufacturers, upon whose behalf I made some extensive enquiries a few years ago in connection with a proposal which this firm had under consideration for establishing a plant for the production of cider in some part of the Dominion. Negotiations at the time fell through, but since then the firm has been giving the matter attention, and a short time ago sent out a representative to personally look into the whole subject.

I was informed that as a result the firm has acquired a controlling interest in a plant in the Maritime Provinces, which it is proposed to develop upon a larger scale. It is their intention to produce supplies of juice for shipment to their own factories in England, and also to manufacture cider for the Canadian market, by the employment of the same methods which have acquired a high reputation for their cider in the United Kingdom. I understood that the question of transportation had an important bearing upon their selecting Nova Scotia as the most suitable site for the purpose which they had in view.

BOARD OF TRADE REPORT ON BRITISH TRADE IN CANADA.

The publicity and favourable comments given by the United Kingdom press to Mr. Richard Grigg's report, have evidently attracted a considerable amount of attention in commercial circles. Several of the firms who have recently applied to us for advice in connection with steps which they contemplated taking for the purpose of developing trade in Canada, mention this particular report as having attracted their attention to the matter.

HARRISON WATSON.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. MacNamara.)

CANADA CHAMBERS, 36 SPRING GARDENS,
MANCHESTER, ENG., March 13, 1908.

GREAT BRITAIN'S EGG IMPORTS.

I give herewith the quantities and values of eggs imported by Great Britain for the years 1906-7, taken from the Trade and Navigation returns, in the hope that it may prove of interest to the Canadian exporters.

Years ending December 31, 1906-7.

	Great Hundreds..		Value.	
	1906.	1907.	1906.	1907.
			£	£
Russia ..	7,132,928	7,178,941	2,344,256	2,392,044
Denmark.....	3,823,942	3,800,366	1,701,291	1,774,318
Germany.....	2,644,242	2,821,124	957,905	1,030,190
Belgium.....	2,444,746	2,133,612	992,103	891,460
France.....	1,491,219	1,232,107	623,104	541,088
Canada.....	231,719	115,872	106,593	53,084
Other countries ..	1,105,263	1,285,869	373,070	452,348
	18,874,059	18,567,891	7,098,122	7,134,532

Eggs have been very scarce and dear during the latter months of 1907, and up to the end of January, 1908, and the problem of winter production within the Kingdom is yet practically unsolved. Those who have had eggs for sale realized very high prices

CHEESE.

One of the largest wholesale produce firms in Manchester reports that since January their trade for Canadian cheese has been decidedly slow, sales have been practically nil, the bulk of their trade being turned on to New Zealand produce, which is now offered on the market at 1s. to 1s. 6d. less per cwt. than Canadian, and at the present moment are considered better value.

Although the trade is quiet, the market is exceedingly firm, and prices now ruling 63s. 6d. finest white, and 65s. 6d. coloured, the latter grade being very scarce indeed.

Stocks published for the month ending February 29, show about 185,000 at the three ports: London, Liverpool, and Bristol, and the estimated stock of Canada somewhere about 55,000, showing a total of 240,000 boxes. The consumption of cheese is fairly good, and the average well maintained. They would not be surprised to see a great pinch, but I think it will not be felt till towards the end of March, when they look for Canadians at high prices, at least 5s. more than at the present time. There is one thing certain, the season will open up very late owing to the high prices of butter on this side which will cause many of the makers to turn on to making butter instead of cheese.

The quality of Canadian cheese has been very good this season, and stocks in hand which have been kept since last September show good keeping qualities. There is an absence of green cheese being shipped, which is one of the most important factors to the good quality which they are now experiencing.

BRITISH TRADE RETURNS.

The Board of Trade returns recently issued again show a decline. The total imports for February were £52,426,815, a decrease of £499,782, compared with preceding month. The exports of British goods amounted to £31,949,514, a decrease of £123,831 compared with January. The exports of imported goods totalled £7,497,673, a decrease of £1,928,157.

P. B. MACNAMARA.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(*Mr. P. B. Ball.*)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., March 11, 1908.

COST OF ROAD MAKING.

It is always noticed by Canadian visitors to Great Britain that the roads are kept in magnificent repair. In fact the ordinary road here is about as good as a well laid macadam street in any large Canadian city, and the question is very often asked by Canadians how it is that these roads are so much better.

In the annual report of the county council of Worcestershire some interesting figures have been brought out. The county has about 455,000 inhabitants. The total mileage of the roads now maintained by the council is 468½ miles, and the net cost per mile for the year ending March 31, 1907, was £68 8s. 2d. (\$332.89). The sums spent for improvements and the maintenance of the roads during 1907 amounted to £40,438 (\$197,248.66). The estimate required for 1908-9, leaving out improvements, is £41,495 (\$201,942).

Great complaints have been made as to the tremendous wear caused by traction engines, and heavy and light motor traffic.

The above prices will give to Canadian county councils an idea of what it takes to keep the roads here up to their present standard.

P. B. BALL.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(*Mr. E. D. Arnaud.*)

GAZETTE BUILDING, ST. JOHN'S, March 14, 1908.

SEALING VOYAGE, 1908.

The annual departure of the fleet of steamers engaged in the sealing industry of Newfoundland occurred on 10th instant, nineteen vessels having left the coast for the ice-fields with exceptionally good prospects for a successful voyage, the weather and ice conditions being much better than they were a year ago.

The fleet is smaller than last year, two of the steamers having been wrecked, and one is now engaged in antarctic exploration work. The number of men employed this year is 3,321, being 564 less than in 1907.

'ASSOCIATION FOR PREVENTION OF CONSUMPTION.'

An important and influentially attended public meeting presided over by His Excellency the Governor was held here recently to consider ways and means of combatting the alarming rate of increase and spread of consumption throughout the colony. In the course of his remarks upon the subject His Excellency, himself a medical man, drew attention to the very high death rate of the city of St. John's, which in 1906 was stated to be 27 per 1,000, compared with London's rate of 15.1 per thousand. Hon. John Harvey the promoter of the meeting, quoted statistics to show that deaths from consumption generally had increased 50 per cent during the last six years, and that at one of the outports the increase had been no less than 150 per cent. The result of this meeting was the formation of an association with a strong committee to take up the work and spare no effort to stop if possible the progress of this devastating disease, which at present is the cause of one-fifth of all the deaths that occur in the colony.

E. D. ARNAUD.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, February 18, 1908.

AUSTRALIAN TRADE FOR 1907.

The preliminary figures for the Commonwealth trade for last year have been issued and show it to have been:—

Imports....	£51,898,380
Exports..	72,913,647

This is an extraordinary growth of over seven millions in imports and a satisfactory growth of three millions in exports.

TRADE SINCE FEDERATION.

The following are the returns of trade from the adoption of Federation:—

	Total Trade.	Imports.	Exports.
	£	£	£
1901.....	92,180,183	42,434,011	49,696,172
1902.....	84,591,037	40,675,950	43,915,087
1903.....	86,061,583	37,811,471	48,250,112
1904.....	94,506,757	37,020,842	57,485,915
1905.....	95,187,766	38,346,731	56,841,035
1906.....	114,467,269	44,729,506	69,737,763
1907.....	124,812,027	51,898,380	72,913,647

It will thus be seen that the Australian imports have increased by £9,464,369, and exports by £23,217,475, or an aggregate increase in the total oversea trade since the first year of federation of the large sum of £32,681,844. The increase has not only been the increase for the whole Commonwealth, but there has been what was not anticipated, a growth per head of the population. The returns of the trade are:—

	Total Trade.	Imports.	Exports.
	£ s. d.	£ s. d.	£ s. d.
1901.....	24 5 10	11 3 9	13 2 1
1902.....	21 18 9	10 11 0	11 7 9
1903.....	22 1 2	9 13 10	13 7 4
1904.....	23 18 1	9 7 3	14 10 10
1905.....	23 13 11	9 10 11	14 3 0
1906.....	28 0 4	10 19 0	17 1 4
1907.....	30 0 0	12 11 6	17 8 6

Another striking feature is the huge development in the balance of trade in favour of Australia from the drought 1902, when there was a balance of trade in favour of Australia of over £3,000,000. Last year it had swollen to over £21,000,000. This was less than that of the year before, in which it was £25,000,000, but there was not an actual decrease, inasmuch as the exports of gold in 1907 were much more restricted than in 1906, the movement being:—

	1906.	1907.
	£	£
Imports.....	4,928,401	3,723,283
Exports.....	16,874,912	10,897,177
Net Exports...	11,946,511	7,173,894

The reduction in the net exports of gold of £4,472,617, if added to the balance of trade for 1907 will show it to be greater in 1907 than in 1906. Australia needs a large balance to meet its obligations abroad, but they have been so large as to show that during the last five years the country has been gaining materially in wealth. The details of the trade with countries will not be available for some time, and it is, therefore, impossible to accurately say what has been the condition with respect to the Canadian trade and of the movement of the trade with other countries.

The large increase in trade is due in no small measure to the increased prices of products both in imports and exports, and the year, 1908, must show a material decline in the value of it. The increase of imports in 1907 over 1906 was very general, and it is clear that they were made in part in anticipation of increased duties that were likely to be imposed by the Commonwealth Parliament. There was also a very general increase in the exports, particularly in coal, copper, lead and other minerals and metals.

THE MINERAL OUTPUT OF NEW SOUTH WALES.

Taken as a whole, the mining interests of the State of New South Wales had a successful year, there being an increase in the value of the production of £2,407,000 over that of the previous year. In gold, the returns show a value of £1,050,730, a decrease of £28,136 as compared with 1906. The total value of the gold won in the State up to the end of last year was valued at £55,364,882. In silver, lead and zinc, concentrates, pig and matte, the production was valued at £4,826,748, being an increase over that of the previous year of £1,669,885. The total production of the silver and lead mines of the State is not much below that of the gold mines, being in value £48,953,781. Copper mining was not as prosperous, the yield being £727,774, a decrease of £67,735 to that of the previous year. The total value of copper produced up to the end of last year was £9,200,203. Tin was obtained to the value of £293,305, an increase of £37,561 for the year. The total value of tin raised up to the end of the year in the State was £8,037,814. The output of coal was 8,657,924 tons, valued at £2,922,419, being an increase of 1,031,562 tons of a value of £585,192. The total coal raised in the State to the beginning of the year is estimated at 138,678,149 tons, valued at £53,279,162. The variety of the mineral resources of this country is illustrated by the amount in value of the other minerals obtained. There are increases in all these lines save four, antimony, bismuth, diamonds and molybdenite. The value of the output is as follows:—Alunite, £5,115; antimony, £46,278; bismuth, £5,268; diamonds, £2,056; iron, from ore, £60,550; from scrap, £118,082, total, £178,632; ironstone flux, £9,668; lime, £19,458; limestone flux, £16,162; Portland cement, £144,548; marble, £2,200; molybdenite, £3,564; Noble opal, £79,000; platinum, £1,014, scheelite, £23,781; wolfram, £26,235; sundry minerals, £2,052.

AUSTRALIA AS A PASTORAL COUNTRY.

As there appears to be an interest in Canada as to the quantity of live stock in Australia, I give below the returns of the number of horses, cattle, sheep and pigs for the year ending December 31, 1906. The returns for 1907 will not be available for some time to come.

Horses.

New South Wales.....	537,762
Victoria.....	406,840
Queensland.....	452,916
South Australia.....	224,447
Western Australia.....	104,922
Tasmania.....	38,299
Total.....	1,765,186

Cattle.

New South Wales.....	2,549,944
Victoria.....	1,804,323
Queensland.....	3,413,919
South Australia.....	680,095
Western Australia.....	690,011
Tasmania.....	211,117
Total.....	9,349,409

Sheep.

New South Wales.....	44,132,421
Victoria.....	12,937,440
Queensland.....	14,886,438
South Australia.....	6,661,217
Western Australia.....	3,340,745
Tasmania.....	1,729,394
Total.....	83,687,655

Pigs.

New South Wales.....	243,370
Victoria.....	220,452
Queensland.....	138,282
South Australia.....	112,277
Western Australia.....	56,203
Tasmania.....	42,985
Total.....	813,569

The probability is that there will have been little change in the totals for the Commonwealth than when the returns for the present year are made up. The bad season in New South Wales, it is estimated, will have reduced the number of horses and cattle and that of sheep by at least one million, figures which will counterbalance the gains in the other States which have had better seasons. During the drought, which was unusually general and long prevailing, culminating in 1902, the sheep of Australia had been reduced to 53,668,347, very little more than one-half of the number on the pastures of Australia ten years before. Since that time the flocks and herds of the Commonwealth have increased steadily.

As indicating the position of Australia, the following figures, which are fairly accurate, are given of the number of cattle, sheep and pigs per 1,000 of the population in Australasia, Canada, the United States and Argentina, the chief stock countries:—

Countries.	Cattle.	Sheep.	Pigs.
New South Wales.....	1,532	25,881	204
Victoria.....	1,410	9,298	222
Queensland.....	5,540	23,430	307
South Australia.....	1,687	16,152	310
West Australia.....	2,412	11,911	285
Tasmania.....	1,146	8,798	404
New Zealand.....	2,083	22,619	273
Canada.....	981	442	414
United States.....	795	601	619
Argentina.....	4,250	14,567	128

PASTORAL AND OTHER ANIMAL PRODUCTIONS EXPORTED.

The value of the Australian productions, consisting of wool, meat, skins, tallow and bones and animals living, exported were as follows:—

1901.....	£19,689,509
1904.....	20,292,409
1905.....	24,428,070
1906.....	27,431,454

The chief value is wool, in 1906 amounting to £22,645,769. Other large items were: Sheep skins, £1,614,463; tallow, £878,699; frozen mutton, £1,095,120; other mutton, £206,280; frozen beef, £434,455; and horses chiefly to India, £258,256.

Of the dairy and other animal productions there were exported:—

1901.....	£1,531,661
1904.....	2,530,911
1905.....	2,469,452
1906.....	3,357,069

The chief item is the export of butter amounting in 1906 to £3,240,063.

AGRICULTURAL DEVELOPMENT.

In connection with the animal industry it may be of interest to note the development of Australia in its other lines of industries. The areas under Australian crops in acres were:—

1901-2.....	8,414,054
1904-5.....	9,365,022
1905-6.....	9,433,455
1906-7.....	9,545,856

The yields for these years were very variable, the following being the return of wheat in bushels:—

1901-2.....	38,561,619
1902-3.....	12,378,068
1903-4.....	74,149,634
1904-5.....	54,535,582
1905-6.....	68,520,772
1906-7.....	66,100,654

The low yield of 1902-3 was followed by the record yield of the next year of 74,149,634 bushels. There is not so great a variation in the other crops as there is in wheat and maize. Maize is the production almost wholly of Queensland and New South Wales is a producer of wheat. The climates of these two States vary apparently more than of the other States like Victoria and Tasmania, where the bulk of the oats, barley and potatoes are grown. The uncertainty of the seasons is illustrated by the following figures, giving the production of wheat per acre for six years:—

1901-2.. . . .	7.54
1902-3.. . . .	2.40
1903-4.. . . .	13.32
1904-5.. . . .	8.70
1905-6.. . . .	11.19
1906-7.. . . .	11.06

The yield of the crops in the Commonwealth was as follows:—

Wheat.. . . .	bushels	66,100,654
Oats.. . . .	"	13,611,987
Barley.. . . .	"	2,248,432
Maize.. . . .	"	10,172,154
Beans and peas	"	655,167
Rye.. . . .	"	137,471
Potatoes.. . . .	tons	507,135
Onions.. . . .	"	31,756
Hay.. . . .	"	2,256,140
Sugar cane.. . . .	"	1,950,340
Wine.. . . .	gallons	5,891,945

The acreage devoted to crops, particularly during the last four years, has not increased as the reports of the disposal of land for this purpose led one to expect. There have been increases of less than a quarter of a million acres in four years.

MINERAL PRODUCTION.

The mineral production of New South Wales for the year 1907 has been given. Of the Commonwealth, the production for 1906 from the last returns available is £26,643,298 in value. This is a slow increase, the yield of 1901 having been £22,043,104. The chief metals and minerals produced in value were:—

Gold.. . . .	£14,631,745
Copper.. . . .	3,344,744
Silver, lead, bullion and ore	3,291,557
Tin.. . . .	1,509,488
Coal.. . . .	2,669,948

The production of gold does not vary greatly. In the six years, the highest yield was in 1903, when it amounted to £16,294,685, and the lowest yield in 1901, when it amounted to £14,005,732.

FORESTRY.

Although timber is not a leading production of Australia, in 1906 it was cut to the extent of 429,035,240 superficial feet. This is a little above the average of a series of years. Of that amount, there were exported to the value of £1,012,111. The imports of timber for the year 1906 were in value £1,329,456, showing an excess of imports of £317,345.

MANUFACTURING PROGRESS.

There are only Commonwealth returns for the years 1903, 1904, 1905 and 1906. These are made up from State returns which vary somewhat in the basis on which the statistics are tabulated, but for the future are likely to be assimilated.

	1903.	1904.	1905.	1906.
	No.	No.	No.	No.
Number of factories.....	11,498	11,718	11,889	11,581
Average number employed.....	195,452	202,981	214,200	228,713
	£	£	£	£
Lands and buildings..	20,915,883	21,101,846	21,160,193	20,939,675
Plant and machinery.....	18,639,778	20,294,788	20,683,945	21,731,554

These figures do not show very much growth except in the increase of the number of employees, which is moderate. There is no statement given as to the number of males and females employed during the years referred to, but it is pretty well known that the increase has been in the number of females employed. The number of factories in 1906 were less than in 1904, but those in existence were somewhat larger in extent, as would be expected, and there had been an improvement made in the plant and machinery. There is no return of the value of the production.

The two chief manufacturing States are New South Wales and Victoria. The increases are in clothing and textile production, printing and engraving, the manufacture of vehicles, saddlery and harness and the production of heat, light and power. It has principally been in the production of articles in which local materials are available and in lines such as articles of clay, that could not be easily imported. The increase is almost wholly the work of Australian capital. Notwithstanding the duties that have been fixed since the inauguration of the Commonwealth, foreign capital has not shown any great inclination to invest in Australian industries. Representatives of capitalists from abroad, including a few Canadians, have come, but in nearly all cases of which I have information, advised their principals against investments until there is a greater stability in industrial conditions than they thought now existed.

AUSTRALIAN PROGRESS.

To a Canadian, who would naturally compare the development of Australia with the exceedingly rapid development of Canada or of the United States during similar years, Australian progress would appear to be slow. But in making such comparisons, it must be remembered that in the year 1902 was a culmination of a series of drought years of extraordinary severity. The chief business of the country on the setting in of better seasons was to recover itself from its past losses. Its riches still lie in its flocks and herds. Since 1902 its flocks of sheep have increased nearly 60 per cent and its cattle 33 per cent. Its export of wool has increased 50 per cent in quantity and 90 per cent in value. Its exports of butter have increased almost eight times in quantity and in value. The mineral production of Australia for export will not probably expand in quantity and for some time to come will be less in value.

Special attention is now being given by the people and the government to agricultural improvement through closer settlement on suitable land, better methods of cultivation and irrigation. Under fair seasons, the progress of Australia in the next ten years should be more rapid than in the past ten years. This can be said, that the progress of the last ten years has been without any undue conditions of excitement that lead to severe reaction. The financial condition of the country is sound with every probability of its continuing to be so.

TRADE PROSPECTS.

For six months a large portion of the State of New South Wales has had very little useful rains and the coastal districts have had almost drought conditions. Early this month, heavy rains fell in various portions of the State and in some of the other States, and the outlook for dairying as well as pastoral conditions and for preparations for the next wheat sowing have greatly improved. New Zealand is yet suffering in some of its portions from unusually dry weather. The northern portion, which has suffered most, is not one that produces the articles likely to be required in Canada should the drought continue, but the conditions are so general that they may yet involve an importation of flour, wheat and some other products.

CANADIAN TRADE.

Inquiries from Canada have increased looking towards business in Australia. In some instances there should be a fair opportunity for trade, but Canada is still hampered with the trouble over freight. The prices of a number of articles have been satisfactory, provided they could be delivered at New York in full car lots, but the difference in freight between the two is sufficiently great to prevent the trade, which is almost wholly for less than car lots. Even in such an article as carbide of calcium, the majority of purchasers rarely take more than two tons.

Canadian exporters must devise some method by which they can meet this difficulty if they are to secure the trade here that otherwise they could get. Canadian trade is suffering too from lack of confidence of buyers in Canadian manufacturers being able to fill orders promptly. A letter from a representative of a number of Canadian houses upon this point says:—

‘The last six months of last year have been very trying to me; deliveries were anyhow and manufacturers evidently did not care for export business and it was very discouraging to receive complaints all round. I have still orders on the book which are fifteen months old and naturally one dares hardly approach such firms to solicit for fresh orders. The financial crisis, however, seems to have changed things somewhat as manufacturers seem now to be eager to do an export trade. They promise prompt deliveries and seem also inclined to meet competition on equal terms.’

He further complains of other neglects on the part of the Canadian manufacturer in not properly supporting his agent by prompt replies to correspondence and failure to meet him liberally in the matter of the heavy expenses that the keen competition compels the agent to make. It is possible that the reduction in prices, now general, may put the Canadian manufacturer in a better position to do foreign trade than he has been in for the past four or five years.

PORT OF EXPORT.

I undersand that there is now an all-the-year-round ferry service from the town of Cobourg in Ontario, to Rochester in the State of New York. This should make that route the cheapest to New York, at least, between Toronto and Belleville and the district of Peterborough included to the north. If this should be the case, then Canadian exporters should in their invoices give the proportionate freight to Cobourg as the proportion which is subject to duty in Australia.

EXPORTS TO CANADA.

A Sydney exporter of produce, to whom an inquiry for a number of articles had been sent, replied:—

‘We regret to say, however, that at the present time we cannot possibly do anything with him, as we have more orders on hand just now for butter and onions than

we can possibly supply, owing to our not being able to get space in the Canadian Australian steamers.

'We have orders for onions for Lethbridge, Calgary, Edmonton, and expect some from as far east as Winnipeg, but have to turn them down on account of the Australian Canadian Co. being unable to give us freight space. The same thing happened last year, but we were able to keep our business going via San Francisco by the A. & A. Co. This latter company has now stopped running, and we feel sure that if the governments of Australia and Canada could come to some arrangement to have larger steamers put on the route, that a very large trade indeed could be done in onions, especially during the months of February, March, April and May.

'Last year we shipped about 6,000 cases; this year we have so far been unable to get space for so many hundred. We have no hesitation in bringing this matter before you, as it affects not only our country, but also yours.'

This indicates what has been going on for some time, an increased demand in Canada during the winter season for Australian products and a demand for similar products from Canada on the reversal of the seasons. The two countries are steadily becoming the complements of one another and there could be no doubt that, if the tariffs were not so serious hindrances, this trade could increase very greatly without being injurious to the producers of either country.

BUSINESS QUIET.

Business throughout Australia is stated to be quiet, due to the lower prices for exports and to some extent to diminished production. In New South Wales, trade has been affected by a succession of strikes in the principal coal mines of the State and in Sydney amongst the employees of the timber mills. There is very considerable danger that these strikes may become general. A special arbitration commission is dealing with the coal mining trouble, but in spite of this being in session, strikes have been almost of daily occurrence in one or more of the mines. The timber yard dispute has led to sympathetic strike amongst the allied workers. Though the outlook is not bright yet there are fair hopes that an agreement may be arrived at before these disputes engender a general strike such as the Commonwealth had seventeen years ago.

TRAVEL.

There will likely be an increased number of visitors to Canada from Australia, both of tourists and manufacturers' agents, looking for business connections. Amongst the inquiries, will be one for materials for local manufactures, as, for example, steel and malleable iron parts of agricultural machinery. Efforts were made some time ago to secure these lines, but some manufacturers declined and others, who stated that they wished for this business, failed even to fill the first order. It is hoped that the conditions of this year may be more favourable for trade.

There have also been a good many inquiries from persons who desire to go to Canada for settlement. Nearly all of them are a fine body of men and women. Among these are a number of recent immigrants from Great Britain who are disappointed in the possibilities open to them to secure farms in this country. They are not possessed of much capital and do not see how, at 15s. per week and their board, they can accumulate within a reasonable time sufficient capital to buy reasonably good land at £4 to £5 per acre and then have to fence it, put up buildings, and acquire the stock to work it.

J. S. LARKE.

TRINIDAD AND TOBAGO.

REPORT OF COMMERCIAL AGENT.

(Mr. Edgar Tripp.)

PORT OF SPAIN, TRINIDAD, March 7, 1908.

RECIPROCITY CONFERENCE, BARBADOS.

I have the honour to inform you that at a meeting of the Legislative Council, held on the 2nd instant, His Excellency the Governor, in the course of an important Minute on the Estimates, said:

'At the beginning of next session a measure will be submitted to you for the revision of the tariff. It had been my intention to submit this measure to you at the present session, but a movement is on foot for the establishment of reciprocal trade relations with Canada, and should it be decided that it would be to the advantage of this colony to take part, some alteration of our tariff would be inevitable. It seems, therefore, expedient to leave any question of revision until the scheme, which is as yet in its inception, is further advanced.'

Owing to the delay in making the Proceedings of the Barbados Conference public, the question has not yet been submitted for consideration to the Chamber of Commerce or the Agricultural Society, the opinion of both of which bodies will probably be invited by the government before taking action, but official reports of the conference having now been circulated, the question will doubtless be promptly brought forward.

I regret to state that the able and popular governor of this colony, Sir Henry Moore Jackson, is again compelled by ill-health to take leave, and will proceed to England on the 9th inst.

EDGAR TRIPP.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA AND TASMANIA.

*(Mr. D. H. Ross.)*STOCK EXCHANGE BUILDING,
MELBOURNE, February 17, 1908.

AUSTRALIAN TRADE IN 1907.

Preliminary returns have been issued by the Commonwealth Department of Trade and Customs which show a remarkable expansion in Australian trade in 1907. The figures—which easily constitute a record—reveal a total trade for the year of £124,781,611 as compared with £114,467,269 for 1906, or an increase of £10,314,350. The totals for the two years are given for comparison as follows:—

	Imports.	Exports.	Total Trade.
1906	44,729,506	69,737,763	114,467,269
1907	51,878,171	72,903,440	124,781,611

The increase in imports is the natural effect of the increase in exports during the last three years which expanded the purchasing power of the country. A feature in the value of the imports is that it is partly represented by higher costs in consequence of the general advance of prices in the world's markets. With the exception of wool there has been no marked increase in the value of the exports; many stable lines

showing a considerable reduction when compared with 1906. A reaction is expected in 1908, owing to the comparatively small quantity of wheat available for export, the reduced production of butter and the lower range of prices ruling for wool, tallow, metals and other staple commodities.

MERCHANDISE AND GOLD EXPORTED BY AUSTRALIA IN 1907.

An analysis of the Australian trade returns for 1907—separating gold (specie and bullion) from merchandise—is shown in the following: Exports, 1907, gold, £10,897,027; merchandise, £62,006,413; total exports, £72,903,440.

The imports of gold for 1907 are given at £1,464,756, thus showing the net increase of exports of gold over imports at £9,432,271.

PRINCIPAL ITEMS OF AUSTRALIAN IMPORTS, 1907.

The figures for 1907 are taken from the monthly returns received from the various States and the values of the principal items of Australian imports may be slightly varied on revision. The leading lines of Australian imports in 1907, showing increase or decrease as compared with 1906, are as follows:—

Item.	1906.	1907.	Increase 1907 (+). Decrease 1907 (-).
	£	£	£
Ale and beer.	384,515	412,589	(+) 28,074
Apparel and textiles.	10,873,272	12,582,557	(+) 1,709,285
Boots and shoes.	343,376	360,386	(+) 17,010
Brushware.	145,748	166,457	(+) 20,709
Clocks and watches.	160,845	222,310	(+) 61,465
Cocoa and chocolate.	237,677	296,140	(+) 58,463
Confectionery.	116,305	141,016	(+) 24,711
Cordage and twines.	522,352	607,340	(+) 84,988
Drugs and chemicals n.e.i.	876,801	958,697	(+) 81,896
Earthenware, china, &c.	253,005	338,482	(+) 85,477
Fish (all kinds).	371,006	405,962	(+) 43,956
Fruits—raisins.	12,695	6,196	(-) 6,501

" cigarettes.	55,549	49,114	(-) 6,435
Tools of trade.	341,297	481,085	(+) 139,788
Wine.	105,333	119,117	(+) 13,784

PRINCIPAL ITEMS OF AUSTRALIAN EXPORTS, 1907.

The following comparative statement shows the Australian exports of certain principal items in 1906-1907:—

Item.	1906.	1907.	Increase 1907 (+). Decrease 1907 (-).
	£	£	£
Animals—horses.. . . .	258,256	329,565	(+) 71,309
Butter.. . . .	3,240,063	2,890,531	(-) 349,532
Coal.. . . .	894,002	1,302,205	(+) 408,203
Copper (ingots "and in matte").. . . .	2,998,075	3,457,226	(+) 459,151
Fruit, fresh—apples.. . . .	134,302	205,281	(+) 70,979
Fruits, dried—raisins.. . . .	205	68,746	(+) 68,541
Grain—wheat.. . . .	4,913,800	4,801,723	(-) 112,077
Flour.. . . .	1,216,849	1,296,308	(+) 79,459
Lead (pig "and in matte").. . . .	839,806	1,551,962	(+) 712,156
Leather.. . . .	573,326	533,708	(-) 39,618
Meats, frozen—beef.. . . .	434,455	575,732	(+) 141,277
" mutton and lamb.. . . .	1,095,120	1,377,502	(+) 282,382
" rabbits and hares.. . . .	491,434	472,816	(-) 18,618
" preserved in tins.. . . .	178,120	151,408	(-) 26,712
Silver bar.. . . .	814,874	1,292,108	(+) 477,234
Skins and hides—			
Hides.. . . .	166,908	209,695	(+) 42,787
Rabbit and hare.. . . .	477,450	417,710	(-) 59,740
Sheep.. . . .	1,614,463	1,848,433	(+) 233,970
Other.. . . .	457,699	347,658	(-) 110,041
Tallow.. . . .	878,699	1,037,195	(+) 158,496
Timber.. . . .	1,012,080	797,371	(-) 214,709
Tin ingots.. . . .	1,168,233	1,122,474	(-) 54,241
Wine.. . . .	97,652	126,444	(+) 28,792
Wool.. . . .	22,645,769	28,891,830	(+) 6,246,067
Ores (exclusive of gold).. . . .	977,687	1,504,513	(+) 526,826

The increase in the value of the wool exported was caused by a considerable quantity of 1906 wool being shipped in 1907.

QUANTITIES OF PRINCIPAL AUSTRALIAN EXPORTS, 1907.

Hereunder is given the quantities exported from Australia in 1906 and 1907 of some of the items enumerated in the preceding table. Large increases in the exports of beef, mutton and lamb, wine and wool will be observed.

Item.	1906.	1907.	Increase 1907 (+). Decrease 1907 (-).
Butter.. . . . Lbs.	75,802,856	66,083,804	(-) 9,719,052
Wheat.. . . . Centals.	18,157,401	17,270,480	(-) 886,921
Flour.. . . . "	3,337,610	3,269,447	(-) 68,163
Beef.. . . . Lbs.	41,561,252	52,048,592	(+) 10,487,340
Mutton and lamb.. . . . "	90,692,385	109,227,757	(+) 18,535,372
Tallow.. . . . Cwt.	684,779	676,708	(-) 8,071

Silver.. . . . Ozs.	8,617,936	9,526,459	(+) 908,523
Tin.. . . . Cwts.	130,120	132,218	(+) 2,098

HASKETT-MOORE IRON ORE PROCESS.

In Monthly Report, May, 1906, page 1937, I gave a detailed account of the Heskett-Moore invention from which it was claimed that a direct method had been discovered for treating iron ore whereby it could be converted into iron and steel by one continuous process. The Melbourne inventors have, for nearly two years, been conducting exhaustive experiments, and the delays which have taken place are ascribed to the difficulty of securing labour skilled in the metallurgy of steel. The company is now completing a new furnace, and in a few weeks the machinery will be ready for final tests in cost of production. It has been announced that the Canadian patent rights have been sold for £375,000 with a stipulation by the purchasers that the certified cost of production must show a decrease of $17\frac{1}{2}$ per cent as against the present methods. The company appears confident of the next demonstration proving that even a greater saving can be obtained, and the results will be embodied in a later Weekly Report.

LEGAL SIZE OF CORNSACKS PROCLAIMED.

After considerable agitation, the Commonwealth Minister of Trade and Customs has issued a proclamation prohibiting the importation into Australia as standard cornsacks any bag the net capacity of which exceeds 200 lbs. of normal wheat. The prohibition will date from May 15th, 1908, in order to admit shipments of bags now in order, and to give the manufacturers in India time to make the necessary alterations in their looms to agree with the dimensions of the new bag.

AUSTRALIAN IMPORTATIONS OF PULP.

In Monthly Report, April, 1904, page 1,328, I supplied particulars of the quality and approximate quantity of pulp required by Australian paper mills. Recently several inquiries have been received from Canadian firms interested in this product, and the result of further investigation of the Commonwealth market conditions confirms my previous report. There are three paper mills in the vicinity of Melbourne under one proprietary, and in an adjoining state are mills of equal capacity. Altogether, the Victorian paper mills will import from 1,500 to 2,000 tons of pulp this year. The Victorian mills require about 600 tons of sulphate and sulphite unbleached, and 100 tons of sulphite bleached. Supplies are mainly drawn from Sweden. The average freight from the pulp mill to Melbourne is about £2 (say \$9.73) per ton. Quotations are desired by the Melbourne paper mills upon a c.i.f. basis, and a special inquiry for Canadian pulp is being forwarded by this mail to the Superintendent of the Trade Commissioner Service, Ottawa, from whom the address of the Melbourne importers can be obtained.

AUSTRALIAN IMPORTATIONS OF LEATHER.

Considering the rather unsettled condition of the Australian trade in imported leathers, very fair orders have recently been taken, by the direct representative of the factory, for Canadian glazed kid. Buyers are holding back their regular indents for large quantities in expectation of a fall in values. The Australian hide and skin trade is for the time being somewhat depressed. By maintaining a regular standard quality, Canadian tanners are certain to receive an increasing share of Australian orders for glazed kid leathers.

CARBIDE OF CALCIUM.

In 1906 the Commonwealth imported 4,298 tons of carbide of calcium to the value of £64,601. The sources of supply were as follows:—

United Kingdom	£ 1,469
Germany	22,089
Italy	433
Norway	7,592
Portugal	246
Sweden	26,706
Switzerland	44
United States	6,601

The Australian market is an increasing one and certainly well worth the attention of Canadian carbide manufacturers. Some United States carbide has not given satisfaction in either the quality of the product or the manner in which it was packed, hence there is at present an undoubted prejudice in Australia against American carbide which, to some extent, reflects upon Canadian. Scandinavian carbide is favored by importers. All sizes from medium lump down to electrolite are in demand, and prices must be quoted c. i. f. Melbourne and other Australian ports. There is a difficulty in securing marine freight from New York, which is the port of shipment, as some of the steamers decline to carry carbide on any account. In other instances the carbide is carried on deck at shipper's risk entailing high insurance charges. An inquiry for Canadian carbide of calcium is being forwarded, on behalf of a Melbourne importer, to the Superintendent of the Trade Commissioner Service, Ottawa. If c. i. f. prices and necessary particulars are sent to this office, it will give me pleasure to place same in possession of all the large importers of carbide in Australia.

1908 CROP PROSPECTS OF AUSTRALIAN DRIED FRUITS.

The 1908 season promises to give a record in the production of lexias, sultanas and currants at the rapidly expanding irrigation settlements at Mildura, Victoria and Renmark, South Australia. In Monthly Report, April, 1907, page 123, I quoted the export prices ruling for the 1907 season and, from inquiries made, it would appear that the 1908 quotations to Canadian imports will likely be a shade less than last year. The export prices will be fixed early next month by a conference of the growers. Special efforts have been made by the Melbourne exporters to secure a much larger outlet in Canada for Australian dried fruits, and first shipments are contemplated by the steamer sailing on April 13, and due at Vancouver on May 7.

CANADIAN BOOTS AND SHOES.

By far the most comprehensive range of samples of Canadian boots and shoes ever sent to Australia have just been opened up in Melbourne. The manufacturers (John Ritchie & Co., Ltd., Quebec) are to be congratulated upon the appearance and quality of the goods which afford a striking illustration of the advances made in recent years by Canadian firms endeavouring to secure an oversea market. The line has the very best representation it could possibly secure, and the capable and energetic agents look forward to excellent business in the near future.

AUSTRALIAN IMPORTATIONS OF OATS FROM AFRICA.

Within the last few days a shipment of Algerian variety of oats from South Africa has been landed in Melbourne. Further shipments making a total of some 2,000 tons are now on the water. This trade is entirely new, and is not considered to offer much expansion when Tasmania and New Zealand oats are available.

SHIPMENTS FROM MELBOURNE FOR CANADA.

Included in the cargo of the *Moana* sailing to-day for Vancouver are 115 bales of wool for Hespeler, Ontario, and 115 tons of onions for British Columbia, both shipments having been made by Melbourne exporters. The *Marama* scheduled to leave for Vancouver on March 16, will take over 200 tons of Victorian onions and other seasonable produce.

AUSTRALIAN BUTTER.

The London market for Australian butter reached 150s. (\$36.49) per cwt., (112 lbs.) last week for choicest Victorian, which should almost constitute a record. Melbourne butter exports have been offering up to 116s., (\$28.22) for best qualities, but owing to comparatively small quantities available for shipment little business has resulted. While supplies are short, it is obvious that prices are subject to the risk of considerable fluctuation. The dairying industry has received a great impetus from the improved prospects for the sale of pure butter in the United Kingdom, and there is now a demand for all the surplus available for export at rates that are highly remunerative to the producer.

CANADIAN TRADE NOTES.

A fairly large consignment of Canadian organs is now being landed at Melbourne. An inquiry for chair seats required by a large Melbourne importer is going forward by this mail to the Superintendent, Trade Commissioner Service, Ottawa, from whom the address can be obtained. The addresses of Canadian makers of picture mouldings and veneers have recently been supplied to inquiries at this office. The demand for mouldings is rapidly increasing, and it is remarkable that Canadian manufacturers of this line do not endeavour to obtain at least a share of the Australian business. The agents for several Canadian manufacturers report fair orders being sent by this mail. Trade conditions in Australia indicate that the 1908 imports will not be far short of the imports for last year.

D. H. ROSS,

SOUTH AFRICA.

REPORT OF TRADE COMMISSIONER.

(*Mr. John A. Chesley.*)

RHODES BUILDING, CAPE TOWN,

P.O. Box 668, February 18, 1908.

TARIFF COMMISSION.

The commissioners appointed by the late government of the Cape Colony for the purpose of ascertaining the views of merchants, farmers, manufacturers and others, respecting the tariff now in force in South Africa, and its effect on the trade of the country, generally, have held several meetings, and collected a great variety of opinions upon all matters relating to trade and commerce.

The work of the commissioners will be embodied in a report, and submitted to the government of the day for consideration, this will be done prior to the meeting of the Customs Union Conference of the South African governments, in April next. Since the appointment of the commissioners, and the completion of their work, a new government of the Cape Colony has come into power; by whom the report of the commissioners will be considered.

CUSTOMS UNION CONVENTION.

The present Customs Union Convention came into force in May, 1906. It was agreed upon at a conference, held at Pietermaritzburg in March of that year, by representatives of the governments of Cape of Good Hope, Natal, Orange River Colony, Transvaal and Southern Rhodesia, and provided, if ratified by the respective legislatures of the colonies named, to continue in force for three years thereafter. It also provided that either government, at the expiration of this period (three years) would be at liberty to withdraw from the convention, but before doing so must give the other members of the Customs Union six months' notice of its intention to do so. The withdrawal therefrom to date from the expiration of the notice so given.

FORTHCOMING CONFERENCE.

It is expected the Inter-Colonial Conference on Customs and Railways will meet on the first or second week of April next, and will not occupy more than a month in its deliberations. It is understood that a large amount of material, amassed at the Customs Conference in Pietermaritzburg two years ago, will form the basis of much work at the forthcoming conference, and as the elections in Cape Colony will be over by the end of March, the convening of the various parliaments will immediately follow the closing of the conference, when the necessary legislation will be enacted making the decision reached by the conference effective.

In well informed quarters, the reversion to the original ten per cent tariff which obtained before *ad valorem* duties were increased to 15 per cent two years ago, is foreshadowed, together with an extended free list, and moderate protection designed to afford assistance to such colonial industries as demonstrates any prospect of permanence. It is now anticipated that there will be no friction between the interior and coast colonies on this matter. The Cape and Transvaal ministers are reported to regard the position from the point of view of the general development of the industrial convenience of South Africa.

FEDERATION OR UNIFICATION.

The anticipation that there would be a separate conference for the purpose of considering the proposals for federation or unification is not now entertained, though an informal discussion may take place. The indications are that no attempt will be made to arrive at a definite conclusion, but that a number of representatives, not necessarily ministers, will be selected from each colony, and that a permanent commission will be formed, thoroughly to consider the subject of union, with a view to reporting to the various parliaments during the session of 1909.

CATALOGUES AND PRICE-LISTS.

The following paragraph from my report of the 24th June, 1907, is quoted, for the purpose of again calling the attention of Canadian manufacturers and exporters to the importance of supplying this office with catalogues, price-lists and discounts.

QUOTATIONS FROM FORMER REPORT.

'The interests of Canadian exporters would be facilitated by supplying this agency with catalogues and price-lists of their goods. The quotation in all cases to be *c.i.f.*, as merchants and others desire to know the cost of merchandise landed at Cape Town or other South African ports, reached by the Canadian South African Steamship service. This seems necessary in view of the fact that exporters of the United Kingdom, the United States, and some other countries, are represented here by local agents, who can at short notice furnish buyers with prices in all the principal lines of merchandise required. This is especially so in the case of manufactured goods.'

METHOD OF AMERICAN MANUFACTURERS.

The following notice clipped from the *Cape Times* newspaper exhibits a new method adopted by American manufacturers to facilitate the sale of their goods in the South African market. The public notice thus given clearly shows the importance of Canadian manufacturers giving this new departure their early and close attention. If Canadian manufacturers desire to extend their business in South Africa, they must make similar efforts, and either supply this agency with like information or adopt other means for placing it before the purchasing community of this country.

CLIPPING FROM CAPE TIMES NEWSPAPER.

'The Chamber of Commerce has received a letter from the American Consul-General stating for the information of members of the Chamber that a commercial information bureau has recently been started at the Consulate-General in Cape Town, where anyone applying may examine the catalogues of almost any article manufactured in the United States, and may obtain price-lists, discounts, and other valuable information concerning the same.'

MANUFACTURERS ASSOCIATION TO DEAL WITH MATTER.

The Canadian Manufacturers Association should deal with this matter at the earliest possible opportunity, and devise some means of having catalogues, price-lists, and discounts, available for immediate use when required, for the following lines of manufactures: Agricultural implements, windmills, well-boring machinery, hardware and cutlery, carriages, barbed fencing wire, plain fencing wire, boots and shoes, wire nails, horse shoe nails, fencing standards, wire netting, machinery (mining), furniture of all kinds, haberdashery, stoves, tools, hats and caps, hosiery (cotton, silk and woollen), hoes and picks, musical instruments, leather (enamelled and morocco), paper (bags, wall and printing), leather (patent) machinery (electrical), machinery (manufacturing).

JOHN A. CHESLEY.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

(*Mr. J. B. Jackson.*)

NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENG., March 18, 1908.

CANADIAN TRADE WITH HULL.

From a geographical point of view, Hull—the third port in Great Britain—is situated in a unique position on the northeast coast for transshipment so as to supply the Scandinavian, Baltic and other continental trades, and, indeed, it is this trade which plays such an important part in the continued progress of this port. At the same time, however, it is probably due to its situation that Hull, in the past, has not received the same recognition as a trading centre that Canadian exporters have accorded to Liverpool and other British ports.

Since this office was established it is gratifying to note, however, that a decided tendency is showing itself on the part of Canadian shippers to more fully appreciate the facilities Hull offers as a distributing point for certain lines of Canadian products and manufactured goods.

HULL'S TRADE IN 1907.

The year 1907 was one of the most important in the commercial history of this port—the inward tonnage of vessels being 5,855,396 tons—an increase of 800,630 tons over the preceding year. A corresponding increase was also recorded in the outward tonnage, the foreign exports of coal alone, according to one authoritative estimate, reaching the figure of 3,449,340 tons.

DIRECT IMPORTS FROM CANADA.

Although small in amount, a variety of Canadian goods found their way to this port during the past year and two shipping lines are already in the field making Hull a port of call on their outward return journeys in connection with their sailings to Canada from other British ports. When it is remembered that up to a few years ago it was only on very rare occasions that vessels traded between Hull and Montreal; the following local returns relating to the tonnage of vessels entering and leaving the port last year will be read with interest:—

	1907.	1906.
Inward tonnage, Montreal to Hull.	20,484	19,972
Outward tonnage, Hull to Montreal.	17,842	17,319

The inward trade possibly did not come up to what was expected, but the imports from Canada made up for any lack of support in this direction.

Some interesting features of the trade of Hull last year was the direct imports of 47,832 packages of apples, classified under the heading of 'American,' a large percentage of which, however, were of Canadian growth. The imports of Canadian cheese too, were also slightly higher than in the previous year and the quality left nothing to be desired.

HULL'S PRINCIPAL IMPORTS.

One of the most noticeable increases in the imports during the year under review was in the case of wheat which was heavier by 354,335 qrs. than in 1906. Other imports during 1907 which will be read with interest by Canadian exporters, are as follows:—

	1907.	1906.
Wheat. Qrs.	4,240,917	3,221,291
Barley. "	770,303	498,584
Oats. "	165,621	276,389
Beans. "	10,421	1,323
Peas. "	47,298	52,613
Maize. "	935,009	909,662
Linseed. "	809,974	579,957
Rapeseed. "	103,246	141,882
Cloverseed. Tons	2,429	2,488
Oilcake. "	27,463	44,190
Timber. Loads	286,004	253,129
Deals. "	589,103	592,107
Hides. Cwt.	107,874	136,830
Bacon. "	356,527	355,088
Beef and pork. "	136,348	136,764
Hams. "	5,180	10,050
Meat. "	110,713	109,736
Butter and margarine. "	764,692	867,601
Cheese. "	38,008	32,389
Flour. Lbs.	45,366,709	41,818,653

AUSTRALIA'S TRADE WITH HULL.

The outward trade to Australia, like that of Canada, scarcely came up to what was anticipated, but now that a direct and regular service of steamers has been instituted, it is expected that this part of the trade will eventually make progress.

The inward trade, however, was satisfactory, the tonnage of vessels entering the port from Australia during 1907 being 36,489 tons as compared with 29,274 tons in 1906. It is interesting to note that as a result of this direct service the Australian wool trade has benefitted considerably, the imports into Hull during 1907 being 30,850,670 lbs., compared with 24,130,626 lbs. in 1906, and there is every indication that a still further improvement will take place during the present year.

JNO. B. JACKSON.

BARBADOS.

REPORT OF TRADE COMMISSIONER.

(*Mr. E. H. S. Flood.*)

28 BROAD STREET,

BRIDGETOWN, BARBADOS, March 14, 1908.

COMMERCIAL TRAVELLERS IN WEST INDIES.

Since reporting in this Report, page 1932, I have made a most careful inquiry to ascertain how many commercial travellers had been through the West India Islands since November last, representing Canadian firms. Though I find that on several occasions since that time, a number of English and American travellers have called on, and shown their samples to the merchants here, I can only hear of a doubtful half-dozen in all showing Canadian lines. The buyer for one of the largest firms in Bridgetown, informed me that late in January he was called on by over twenty travellers in one week showing English and American goods.

The clipping which I am inserting is from the *Advocate*, the leading newspaper in Barbados. The writer of this article sees the position clearly and his recommendation endorses what I urged as to the need of more attention being given to this trade.

'Since the question of closer trade relations with Canada has been brought prominently to the front, there has been considerable recasting of the causes of the failure of the manufacturers of Canada to take a better place in the West Indian markets than that which they now occupy. One of these causes, it is alleged by those in a position to speak with authority on the subject, is the absence of Canadian commercial travellers. Every day in certain seasons witnesses the arrival in these colonies of travelling representatives from English and American firms; and the German manufacturer is also well represented in some places. But the Canadian representative is a *rara avis*. It is not surprising then that the trade that is pushed advances, whilst that which is left unassisted suffers a decline. Even preferential duties will not help the Dominion manufacturers unless they follow on the lines that are successfully pursued by their English and American competitors. And the West Indies, it must be remembered, are not the only fields to be worked. There is an ever growing trade between the United States and Brazil and the Argentine in which Canada could participate. And Barbados affords an excellent jumping-off station for the commercial

travellers visiting these South American countries. With good trade ambassadors to represent them in this direction, the Canadian manufacturers should have no difficulty in building up a trade which should enable the Maritime Provinces to realize some of the dreams of commercial activity in which they occasionally indulge.

PREFERENTIAL TREATMENT FOR CANADA PROPOSED BY BARBADOS.

As is generally known in Canada, a meeting of delegates from the various West India Islands was held in January last, to consider preferential tariff treatment for British and colonial goods. As far as they were able to go the delegates went, recommending to their governments a schedule of goods which they believed should receive preference. Barbados has prepared a new tariff which is being considered in committee, and which is to give Barbados importers an advantage of about 20 per cent. in the customs duty to be paid on the schedule recommended of goods imported from the United Kingdom and Canada. This tariff has not yet become law, but there is no doubt that it will pass the House and it is hoped, will receive the sanction of the British government. Should it go through, no doubt similar tariff changes will be made by the other West India Islands. Our merchants should try to take advantage of the favourable position in which they are placed by reason of the preference. Their travellers should be on the ground as soon as possible after the new tariff has been adopted. I hope to be able to report in a very short time that this tariff has become law.

E. H. S. FLOOD.

III.—AMENDED SCHEDULE IV. OF THE INDIAN TARIFF.

(Notification—By the Government of India, Department of Commerce and Industry, No. 10889-37, dated December 20, 1907.—Customs Circular No. XI. of 1907.)

In exercise of the powers conferred by sections 22 and 23 of the Sea Customs Act, 1878, (VIII. of 1878), in modification of the tariff values fixed by the Indian Tariff Act, 1894 (VIII. of 1894), as amended by the Indian Tariff Act (1894), Amendment Act, 1896 (III. of 1896), and as further altered from time to time by notifications of the Governor General in Council, the Governor General in Council is pleased to fix, with effect from the 1st January, 1908, for the articles specified in column 2 of the schedule hereto annexed, the tariff values stated in column 4 of the said schedule.

Provided that nothing in this notification shall affect any additional duty imposed under the powers conferred by sections 8 A and 8 B of the Indian Tariff Act, 1894 (VIII. of 1894), as amended by the Indian Tariff Act Amendment Act, 1899 (XIV. of 1899), the Indian Tariff (Amendment) Act, 1902 (VIII. of 1902), the Indian Tariff (Amendment) Act, 1903 (XII. of 1903), and the Indian Tariff (Amendment) Act, 1904 (XI. of 1904).

IV.—PROHIBITION TO EXPORT MHOWRA FLOWERS FROM BRITISH TO PORTUGUESE INDIA.

(Notification—By the Government of India, Department of Commerce and Industry, No. 127-4, dated the 9th January, 1908.—Customs Circular No. 1 of 1908.)

In exercise of the powers conferred by Section 19 of the Sea Customs Act, 1878 (viii. of 1878), the Governor General in Council is pleased to prohibit the taking by sea or by land of Mhowra flowers from any part of British India to any part of the Indian Possessions of His Majesty the King of Portugal and Algarves.

CEYLON.

NOTIFICATION DATED JUNE 8, 1907, AS TO THE DUTY ON OPIUM.

(Ceylon Government Gazette of June 14th, 1907.)

In pursuance of section 2 of 'The Customs Duties Amendment Ordinance, 1904,' it is hereby notified that the Secretary of State has been pleased to sanction the resolution set out in the schedule hereto, duly passed by the Legislative Council at a public session thereof on the 22nd day of May, 1907, in exercise of the powers vested in it by section 2 (b) of 'The Customs Duties Amendment Ordinance, 1903.'

SCHEDULE.

That this Council resolves that in lieu of the Customs duty of Rs. 2 per pound now levied upon opium imported into the Island, there shall be levied as from the 22nd day of May, 1907, a Customs duty of Rs. 4 per pound on opium so imported.

JAMAICA.

A LAW TO AMEND THE TARIFF LAW, 1899.

(No. 16.—Assented to 3rd July, 1907.)

Be it enacted by the Governor and Legislative Council of Jamaica, as follows:—

1. This law shall be read as one with the Tariff Law, 1899, hereinafter referred to as the Principal Law (Law 20 of 1899).

2. On and after the coming into operation of this law, anything contained in the Principal Law notwithstanding, no duty of any kind shall be payable on.

(1) Portland cement;

(2) Iron or steel framing, specially manufactured for construction of framed buildings;

(3) Artificial limbs, crutches and other appliances for the relief of bodily disablement.

Provided, that as regards artificial limbs, crutches and other appliances as aforesaid, any duty paid since the fourteenth of January, 1907, may be refunded.

3. Unless previously repealed, this law shall continue in force until and including the thirty-first day of March, 1909.

SIERRA LEONE.

I.—ORDER IN COUNCIL DATED 8TH JANUARY, 1907, IN REGARD TO EMPTY KEROSENE TINS.

(Sierra Leone Royal Gazette of January 19, 1907.)

This Order in Council provides for the free importation of empty kerosene cans into the colony.

II.—ORDINANCE NO. 10, ASSENTED TO 2ND MAY, 1907, TO AMEND THE LAW RELATING TO THE IMPORTATION AND KEEPING OF PETROLEUM.

1. This Ordinance may be cited for all purposes as 'The Petroleum Amendment Ordinance, 1907.'

2. Notwithstanding anything in 'The Petroleum Ordinance, 1906' (No. 1 of 1906) hereinafter called the Principal Ordinance contained, it shall be lawful for the Governor in Council, subject as hereinafter provided, to authorize the importation and keeping of petroleum which gives off an inflammable vapour at a temperature of below 95 degrees of Fahrenheit's thermometer.

3. Any person desiring to import or keep petroleum, the importation or keeping whereof is prohibited by the Principal Ordinance, shall apply in writing to the Collector of Customs for a permit to import or keep such prohibited petroleum and shall in such application describe the quality and quantity of petroleum for which such permit is required, the purposes for which and the places in which it is intended that it should be used.

4. No permit under the provisions of this Ordinance shall be granted to import or keep petroleum for the purpose of being used as an illuminant.

III.—ORDINANCE NO. 25, OF 1907, AMENDING THE CUSTOMS TARIFF IN REGARD TO MACHINERY.

Under this Ordinance, from and after the 8th November, 1907, only 'machinery for agricultural and industrial purposes' is allowed to be imported free of duty.

TRADE COMMISSIONER SERVICE.

The Department of Trade and Commerce invites correspondence from Canadian exporters or importers upon all trade matters, and will cause special inquiries to be made by the Trade Commissioners and Commercial Agents into any subject of general interest.

Canadian Trade Commissioners and Commercial Agents should be kept supplied with catalogues, price lists, discount rates, &c., and the names and addresses of trade representatives, by Canadian exporters. Catalogues should state whether prices are at factory point, f.o.b. at port of shipment, or, and more preferable, c.i.f. at foreign port.

CANADIAN TRADE COMMISSIONERS.

AUSTRALASIA.

J. S. Larke, The Exchange, Sydney, agent also for New Zealand.
D. H. Ross, Stock Exchange Building, Melbourne.

BRITISH WEST INDIES.

E. H. S. Flood, Barbados, agent also for the Bermudas and British Guiana.

CHINA, JAPAN AND COREA.

W. T. R. Preston, Club Hotel, Yokohama, Japan.

FRANCE.

A. Poindron, 101 Rue Réaumur, Paris.

GREAT BRITAIN.

P. B. Ball, Rooms 39 and 40, Central House, Birmingham.

J. B. Jackson, cor. of E. Parade and Greek Streets, Leeds.
P. B. MacNamara, Canada Chambers, 36 Spring Gardens, Manchester.
W. A. MacKinnon, Sun Buildings, Clare Street, Bristol.

JAPAN.

Alex. MacLean, No. 14 Bund, Room B. Yokohama.

MEXICO.

A. W. Donly, Apartado, 91B, Mexico, D.F.

NEWFOUNDLAND.

John Webster, 17-19 Victoria St., Belfast.
John McLennan, 26 Guild St., Aberdeen.
E. O'Kelly, 44 Dawson St., Dublin.
Malcolm McIntyre, 35-37 St. Enoch Sq., Glasgow.

JAPAN.

REPORT OF THE TRADE COMMISSIONER.

(*Mr. Alexander MacLean.*)

ROOM B, 14 BUND, YOKOHAMA, February 15, 1908.

MONTHLY RETURNS OF FOREIGN TRADE.

The following is a comparative statement of the value of some of the principal items of export and import between Canada and Japan, as shown by the monthly returns for the first month ending January 31, of the present and the previous year :—

EXPORTS TO CANADA.		
	1908.	1907.
Silk tissues.....		\$ 14,015
Silk handkerchiefs.....	\$ 221	879
Mats and mattings (Hanagoza).....	7,486	11,549
Porcelain and earthenware.....	6,523	7,523
Lacquered ware.....	203	272
Tea.....	8,092	23,250
Rice.....	12,336	31,427
Sake.....	2,792	2,158
Camphor.....		347
IMPORTS FROM CANADA.		
Flour, wheat.....	8,787	3,613

The principal items given in the monthly returns number only twenty-five of imports and twenty-five of exports. For information respecting the lesser and numerous items making up the aggregate of trade, the annual return has to be awaited.

Total export for the first month ending January 31st, of the present and the previous year.	Total import for the first month ending January 31st, of the present and the previous year.
1907..... \$ 14,190,461	1907..... \$ 20,177,587
1908..... 12,261,421	1908..... 24,315,705

GENERAL TRADE RETURNS.

Principal imports for the first month ending January 31 of the present and the previous year:—

	1908.	1907.
Flour (wheat).....	\$ 212,132	\$ 199,576
Butter.....	8,226	1,909
Salted salmon.....	22,052	107,121
Condensed milk.....	105,963	71,655
Fertilizers (artificial).....	1,263,873	506,464
Leather (sole).....	57,470	43,125
Lead (pig, ingot and slab).....	64,774	49,925
Printing paper.....	166,336	92,687
Cotton duck.....	195	3,527
Cotton prints.....	36,983	65,328
Cotton satins and italians.....	111,549	68,131
White shirtings.....	76,643	38,592
Grey shirtings.....	124,234	31,235
Pulp (sulphite).....	95,060	58,503

	1908.	1907.
Horses.. . . .	13,915	4,948
Horned cattle.. . . .	33,860	5,929
Wheat.. . . .	367,198	17,035
Cheese.. . . .	762	841
Whisky in bottles.. . . .	842	28
Tallow (beef).. . . .	45,857	17,534
Nails (iron).. . . .	153,927	160,555
Nickel.. . . .	27,136	44,408
Mechanics' tools and agricultural implements.	33,047	16,369
Musical instruments.. . . .	1,264	3,632
Sewing machines.. . . .	20,249	29,037
Lumber (pine boards).. . . .	3,996	1,850
Timber (round and square).. . . .	14,957	3,615
Portland cement.. . . .	81,769	5

PROTECTION OF PATENTS AND TRADE MARKS.

Replying to a memorandum, addressed to him by the Yokohama Foreign Board of Trade, on the subject of the better protection of patents, trade marks, &c., with special reference to the projected international exhibition to be held at Tokio in 1912, Viscount Kaneko, chief director of the exhibition, may be quoted as follows:—

‘Concerning inventions, designs, models of utility and trade marks of articles which are to be exhibited, I desire to say that according to the provisions of the present law when notice is given to the patent office, before installing such articles in the exhibition, if application for patent or registration has been made within six months from the day of receipt of said articles at the exhibition, such application shall have the same validity as if it had been filed on the same day as the original notice.’ From this it will be seen there will be no danger of any invention installed in the exhibition to be regarded as ‘publicly known,’ which on that account will probably secure the right of the inventor; while with regard to designs, models of utility and trade marks, after one has given notice concerning them to the patent office, as aforesaid, he shall enjoy a prior right to them. So that by enforcement of these laws we feel a proper protection for foreign exhibits is already assured. But in order to render the right of foreign exhibitors more secure, and also to make it easier for them to send articles for exhibition, the Imperial government has already decided to introduce in the present session of the Diet a Bill bearing the following heads:—

(1.) A person having an article which is to be exhibited at the Grand Exhibition of Japan who applies for a patent on his invention or for registration for designs, models of utility and trade marks before installing the same, and obtains patent or registration afterwards, shall have the same protection as if such exclusive rights had been granted on the day when the instalment was made.

(2.) According to article 38 of the present patent law, if the patentee, without proper reason, has not worked and exploited his invention in the empire within three years from the date of his patent, or discontinues working and exploiting the invention in the empire for more than three years, and has refused the offer of a third party to purchase or use the invention on reasonable terms, the director of the patent office may revoke such patent. But in case such patent articles are exhibited at the Grand Exhibition of Japan, the patentee shall be regarded as if he had worked or exploited the invention in the empire during the time such articles are on exhibition.

(3.) In connection with the importation and exhibition of articles which are imported from foreign countries to be exhibited at the Grand Exhibition of Japan, no suit, prescribed in the laws and rules relating to patents, designs, models of utility and trade marks, or no prosecution can be brought against the exhibitor for infringement of the rights which are protected in said laws.’

The Minister of State for Agriculture and Commerce has addressed the governors of prefectures throughout the empire on the subject of trade marks, patents and

designs. The instruction sets out by referring to the rapid development of Japanese industry during recent years and to the consequent necessity of encouraging the growth of foreign trade as far as possible. It goes on to insist upon the essential character of commercial and industrial morality as a factor of sound business expansion, and it notes that many complaints have recently been urged by foreigners with reference to fraudulent imitations of trade marks and designs. It further declares that it would seem that there is justice in these charges, and that some Japanese traders and manufacturers have, for the sake of monetary gain, oblivious of the permanent welfare of commerce, stooped to evil practices. The prefects are therefore urged to use every means at their command with the object of correcting and preventing these abuses. Some of the things that have happened are doubtless due to differences in the laws and procedures of the various countries, but the instruction makes it plain that there have also been acts of deliberate dishonesty.

THE FIGURED MATTING TRADE.

Though of recent growth, the export of figured mattings, a trade centreing at Kobe, has made substantial progress during the past few years, and has now come to occupy an important position in the commerce of that port. Even under circumstances not always favourable the export in question has made comparatively rapid development, as is shown by the following returns of the value of the export during the foregoing five years:—

	Yen.
1903.	4,553,310
1904.	4,843,201
1905.	5,074,338
1906.	5,814,554
1907.	5,926,882

Thus of various exports at Kobe the figured matting trade is ranked by the local press first in importance and value, with exception of cotton yarn and copper (15,000,000 yen each) and matches (7,000,000 yen). Even tea, the trade of the oldest standing, hardly exceeds at Kobe 2,348,000 yen in value, which is less than half of that of figured matting. During its earlier years the trade was monopolized by foreign firms, by whom the market and manufacturers were mainly controlled. But the Mitsui Bussan Kaisha and other Japanese firms put their hand to the export of matting, and the sphere of influence of the foreign firms has been considerably lessened. At present the trade is carried on by the foreign firms at large and by three extensive native companies, the native rivalry taking the form of extensive rather than numerous interests. As to the demand in America, whatever might be the effect of the recent financial crisis, it shows no remarkable decrease; but, on the contrary, there is a tendency to growing demand. Orders are continually pouring in and competition increases.

TRANS-PACIFIC FREIGHT AND PASSENGER SERVICE.

Current shipping news gives weight to the revived report that the Boston Towboat Company is about to make a sale, this time to the United States government, for use in the Isthmian transport service, of the steamships 'Tremont' and 'Shawmut,' now operated in the Northern Pacific Railway service between Tacoma and the Orient. The Seattle agents of the Boston Towboat Company are given as authority for the report that the offer had been made in line with the effort the company is making to dispose of all its vessels of American register, for the reason that it is unprofitable to operate vessels flying the United States flag in the Pacific trade. About a year ago the Boston Towboat Company withdrew the steamships 'Pleiades,' 'Hyades' and 'Lyra,' replacing them in the Oriental service with the British register ships 'Suveric,' 'Kumeric' and 'Oceanic.' As soon as the 'Tremont' and 'Shawmut' are sold, the report says, they will be replaced by British vessels which are now building in England.

However, it is to be remarked that this report, in one form or another, is recurrent. Its revival has significant coincidence with the sittings of Congress at Washington, where the lobby is said to be familiar with the exigencies of the trans-Pacific lines under the United States flag. The Canadian Pacific, the Blue Funnel line, the Chargeurs Reunis, the Osaka Shosen Kaisha and other leading lines are adding largely in number and in tonnage to their fleets; and the inquiry is: 'What is the matter with the American flag?' Nobody believes that the ships carrying the American flag are being run at a loss, but that they are being run at a less profit than their competitors cannot be doubted. The reason why is an economic question that unfortunately has become a political one as well; but only the wilfully and interestedly blind will fail to see what, in this case, is the matter with the American flag.

THE AUTOMOBILE.

The motor car or automobile is very gradually coming into appreciation in Japan, but doubtless its usefulness will be limited by many considerations. A low percentage of the roadway mileage of the country will be found available for car travel, because of the narrowness and pathlike form into which usage has brought them. The leading roads, such as the old Tokaido, the main artery, are roomy enough and are kept in excellent condition, and would afford opportunity for long and fast runs. The expanses that have to be covered when doing, for business or pleasure, official or social Tokio should form inviting scope for motor performance. Osaka, with her merchant princes and her spacious highways, should rise to the occasion. But progress in this particular direction will be slow whilst the motor carriage is regarded as an expensive luxury.

THE SILK MARKET.

According to the Yokohama Raw Silk Traders' Guild the various kinds of raw silk arriving on the Yokohama market from forty-six tributary prefectures during last year totalled 200,764 bales. Of this number 166,833.5 bales are filature silk, 23,758.5 bales re-reels.

The guild, however, is taken to task by the press for not giving the quantity of silk now lying idle in godowns in Yokohama, which cannot be moved owing to the lack of money. The figures, it is said, would make interesting reading, as giving an insight into the conditions at present prevailing in commercial circles—conditions which are far from hopeful, and material improvement of which depends largely upon the restoration of confidence in the American market. The silk trade has its vicissitudes as the more common trade lines have. About two years ago raw silk reached the highly satisfactory figure of 1,300 yen per bale. To-day at 800 yen it fails to move off. The only party to the trade here who, as things are, finds a harvest in silk, is the banker, with whom silk carries well.

JAPANESE STEAMSHIP SUBSIDIES.

Explaining the estimates of the Department of Communications before the budget sub-committee, Mr. Uchida, Director of the Mercantile Marine Bureau, stated that the Shipbuilding Encouragement law had for its principal aim the construction of steamers navigating the far eastern seas, while the Steam Navigation Encouragement law was to assist the extension of Japanese navigation in distant oceans. One of these restricts the minimum tonnage of steamers receiving the bounty to 700 tons, while the other places the minimum tonnage of vessels entitled to the bounty at 1,000 tons. The subsidy granted to the N. Y. K. European line would, by the budget, be reduced from 470,000 yen to 420,000 yen; but as the former amount was spread over seven or eight years and the latter over five, the annual amount received by the Nippon Yusen Kaisha (Japan Steamship Company) would be about the same. The Australian, Bombay and other distant ocean services had to compete with foreign steamship com-

panies, and Japan could not expect the monopoly. The rate of freight of raw cotton on the Bombay line to Japan was 17 rupees, but the conference of the steamers engaged in the trade decided to reduce the rate to 13 rupees. This showed that it was not free competition alone that kept down the freight rates.

Continuing the government delegate said that in the past the Japanese steamers were of small size, being generally under 1,000 tons, while now there were not a few Japanese steamers the capacity of which was between 6,000 and 10,000 tons. The increase in the size of the steamers was due to the operation of the Shipbuilding Encouragement law. The Kawasaki dockyard of Kobe, the Mitsu Bishi yard of Nagasaki and all the smaller shipbuilding yards had been extending their works of late for the purpose of building steamers of larger size and so of participating in the bounty. The shipbuilding encouragement bounty was in the nature of a grant to steamers to be built, and at the present time, when the supply of steel and iron for material for shipbuilding in Japan was scarce and the number of skilled mechanics was yet comparatively limited, the progress of the shipbuilding industry of Japan could not be hoped for unless it enjoyed a bounty. The increase shown in the estimates of the shipbuilding encouragement bounty was due to the war, which necessitated the opening up of additional lines of steam navigation, and there would be many additional steamers completed in the coming fiscal year which would be entitled to the bounty. If the Shipbuilding Encouragement law were repealed, shipbuilders could not carry on their business with any degree of confidence. He was, however, unable to say anything definite before having more fully investigated the question. Japanese shipping showed a marked increase after the war, so that steamers entering and clearing the various ports were now more numerous than foreign steamers. It was true that owners of steamers not receiving government assistance were experiencing difficulties in their business; but it was beyond the power of the government to help every steamship owner. The only remedy for that complaint was that the owners of unsubsidized vessels should exercise increased diligence and perseverance.

PAPER-BOARD TILE.

A Japanese is reported to have invented and patented a new type of tile made of paper-board. He was for several years engaged in the manufacture of paste board boxes. The idea caught him to make tiles from paste board waste, which he daily threw away as useless. After many years' study he succeeded in finding a way of making an ideal type of roof tile which will be proof against rain and fire. His product is stated to be much lighter than the common earthen tile, and will so reduce the work and cost of roofing that it will give a cheaper and better roof at from 30 to 50 per cent less price. The inventor is said to be going to erect a tile factory, having full confidence in his invention.

INCREASED CANADIAN TRANS-PACIFIC SERVICE.

Intervening in the schedule time of the Canadian Pacific ships, and thus offering between Vancouver and Oriental ports a service of increased frequency, is the purport of the announcement of the Chargeurs Réunis, a French shipping company. Shippers to Canadian overland destinations are informed through public advertisement by this company that by arrangement with the Canadian Pacific Railway Company they will, from May next, issue through bills of lading for overland cargo via Vancouver and Canadian Pacific Railway connections. This company have for some time been giving a service to United States ports by what they call their 'Round-the-World' line, and the announcement made is that their route will be changed so that one of their vessels will leave Yokohama every forty-five days for Vancouver direct. This service is to be effected by four ships 'each of 16,000 tons displacement,' with all the modern first-class accommodations.

The Canadian Pacific fleet of six ships was for some time reduced to four, giving only a monthly mail service direct between Vancouver and the Orient. Lately this

company have added to their fleet the SS. 'Lennox' and 'Glenfarg,' which take the places of the 'Tartar' and the 'Athenian,' and thus restore the fleet to its former strength and frequency of service. The intervening of the four first-class liners of the Chargeurs Réunis will give the Vancouver and Oriental route the frequency and efficiency of service something like what it is entitled to. It is probable that this will be the arrangement until the expected new and faster 'Empresses,' said to be projected by the company, will put in their appearance.

The new steamers of the French line are the 'Corse,' 'Ceylan,' 'Ouessant' and the 'Malte.' The latter steamer, a fine specimen of marine architecture, was in the port of Yokohama a few days ago. At an entertainment given by the general agent for Japan in consideration of the first visit of this new steamer to the port, that official said that this company was established thirty-five years ago by several big merchants (which gave rise to the name of 'Chargeurs Réunis'—'United Shippers') and started with only three vessels. Its fleet now number thirty-six large ocean steamers in service in lines to all parts of the world, besides coasting and river vessels. The 'Round-the-World' line was at first operated by cargo boats leaving every two months. This service was now accelerated so that passenger steamers will leave every forty-five days. Proceeding, the general agent said that the gentlemen present would be struck by the absence of luxury which characterized the passenger accommodation, but at the same time would see that great care had been taken to provide for all the comfort required in modern travelling. Amongst the travelling public two well marked distinctions could be made. Firstly, the hurried people who want a schedule to be kept up to the very minute; secondly, the people who are not in such a hurry and to whom comfort is the main object and long stays in the ports of call an attraction. Owing to those two distinctions, there would always be customers for the mail steamers and customers for the cargo and passenger boats, and it was a reason why the steamers of the 'Malte' class could not be said to come into the way of the first-class mail steamers which, under different flags, were running, or would be run, across the Pacific. Answering to different or new requirements, their steamers could only take their rank honourably without aspiring after playing a brilliant part.

THE CEMENT MANUFACTURING INDUSTRY.

Only a few years ago the manufacture of cement in Japan was making very slow progress, the monthly supply throughout the country scarcely exceeding 600,000 barrels. Of late, with the increase of various enterprises, such as railway construction, water-works, water-power, electric works, &c., the demand is described as growing by leaps and bounds, and pressing the mills for more output and greater facilities. At present the total output throughout the country reaches about 1,300,000 barrels per month. The foreign made product has diminished under the competition until last year, when it went from 23,000 yen in 1905 to 10,000 yen in 1906 and to 95,000 yen in 1907. The production of cement is, however, becoming an industry suited to this country, and the home manufactured article will occupy the market.

THE CONFECTIONERY TRADE APPREHENSIVE.

The increase proposed by the tariff now before the national parliament upon the importation of sugar is disturbing to the large constituency of confectionery guilds. These influential organizations of prospective sufferers are moving, not against the tariff directly, but to obtain a refund of the tax on sugar entering into the manufacture of confectionery exported.

The Japanese are themselves large consumers of sweetmeats, and doubtless this taste is shared by the vast populations of the neighbouring Asiatic mainland and islands. The 'Kobe Chronicle' translates from the vernacular press some interesting statistics in evidence of the growing liking of the Japanese for confectionery, and the consequent prosperity of the manufacturers in that line that is now being seriously threatened.

The annual consumption of sugar in Japan amounts to between \$25,000,000 and \$30,000,000, and of this sum it is estimated that sugar used for confectionery and sweetmeats amounts to \$15,000,000 or \$20,000,000. The annual output of various kinds of confectionery in Japan is valued at about \$50,000,000. The importation of confectionery has increased by \$5,000 or \$10,000 annually during the past ten years, notwithstanding the almost prohibitive duties imposed. On the other hand, the imposition of the 'war tax' on sugar has dealt a heavy blow at the confectionery industry, the value exported falling from \$81,000 for 1906 to \$79,000 for last year. It is feared that if the impost on sugar is again increased this year, as proposed, the export of confectionery will further decline and eventually cease. Between import and excise duties it is alleged to be impossible for Japanese confectionery to compete in the foreign market. Imported confectionery is subject to a specific duty; but, being of the best qualities, it is claimed that the customs duty thereon does not counterpoise the excise on sugar. It is alleged that when the war tax was imposed on sugar in 1905 more than 200 manufacturers in the trade in Tokio became bankrupt or were compelled to discontinue business. Now, the proposed increase of the sugar tax is expected to bring about 1,000 of the Tokio confectioners to bankruptcy.

It is pointed out that if the excise on sugar used for confectionery could be reimbursed upon exportation, a great development may be looked for in the export; but it is clear that the real trouble lies in the heavy taxation all round.

Tariff anomalies are unavoidable; and that is a license which comes very much to the relief of the Japanese tariff. Prior to the inclusion of Canada within the terms of the Anglo-Japanese treaty, the general customs tariff upon condensed milk was prohibitory, for which no reason was ever given; and condensed milk still continues to be amongst the tariff anomalies, since in this sugar tariff discussion it is argued that 'excise paid on sugar used for manufacturing condensed milk is reimbursed upon the exportation of the milk abroad, but confectionery and sweetmeats do not enjoy the same privilege.'

There being no export of condensed milk, nor any probability of it, since Japan is at present a non-grazing and non-milk producing country, the anomaly here is clear, unless the purpose may be to confine that line of trade to the parties to the conventional tariff, one of the parties to which (that is Canada) does not appear to be in a position to enjoy the preference, since she does not seriously take advantage of it.

HORSE IMPROVEMENT QUESTION.

The Japanese authorities are not concealing that they were taught by experience, in the course of the recent war with Russia, that it would be expedient with a view to future events to substantially improve the quality of their cavalry. What is called the Horse Administration Bureau has been formed for the express purpose of improving the breed of horses in Japan. This bureau has the active support and sympathy of the War Office in its effort to improve the stock of horses that may ultimately be available for military purposes. Countenanced by the Horse Administration Bureau, horse racing associations have been promoted throughout the more largely populated cities and districts. These have proven very interesting to the Japanese public and have given promise of a large measure of success—a success which, of course, looks first to the financial consideration and next to the promotion of a healthful appreciation of the well bred horse and its uses. There are said to be about 1,800,000 horses privately owned in Japan, only about one-third of which are regarded to be fit for military purposes. It is further said that not more than 1,600,000 horses could be collected in Japan when stock was being taken of the horses available for cavalry purposes during the war. The Japanese horse is, however, an animal that can stand much hard service at the minimum of cost for maintenance. In that respect he will give possibly better service than the more highly bred imported stock, but it is thought that the balance of advantage, notwithstanding the special fitness of the native horse, would be with the heavier and more powerful types. Taking this view of the matter, the military authorities are

understood to be very desirous to promote the improvement of the available stock of horses; and the evidences are clear to the observer that horse racing will certainly prove to be a potent means of popularizing the horse in Japan. The evidence already supplied to that effect by the early experiences of the horse improvement effort have made that clear, but objection is taken to the moral incidents and general moral outcome of horse racing as a public form of popular entertainment. This is a point that is somewhat vigorously contested, even to the raising of the issue in the legislature, which is a condition of things not unknown elsewhere. Whether the horse improvement and racing aspect of the enterprise will survive the vigorous opposition to which it is being subjected on moral grounds, is a question that cannot yet be answered.

PRESENT PRICES—FLOUR.

Stocks on hand are reported to be large, and the market at the present time does not offer anything remarkable to report. Prices are quoted as follows:—

Gold Drop.	4 sacks (49 lbs.)	Yen 10.40
Flag.	4 “	“ 10.40-11.20
Royal.	4 “	“ 10.40
Trophy.	4 “	“ 10.40
Red Seal.	4 “	“ 10.40
Lion.	4 “	“ 11.30
Portland.	4 “	“ 11.10
Premier.	4 “	“ 11.40

Japanese—

Rising Sun.	6 kwamme	Yen 2.78
Takasago.	6 “	“ 2.77
Fuji.	6 “	“ 2.76
Pine.	6 “	“ 2.75

1 yen=50 cents; 1 kwamme=about 8½ lbs.

The market remains dull. Stocks are large.

THE LUMBER MARKET.

Recent inquiries respecting the lumber market in Japan received at this office from points on the Pacific coast of Canada have been answered substantially as follows:—

I have been in communication with some of the comparatively few importers of lumber in this country, but so far without any result.

There are a few old firms who, perhaps, are from time to time importing lumber, but it is usually in the way of special orders which, of course, are sawn to dimensions. There is nothing like market activity with regard to foreign lumber generally. I think this condition of the market may be explained by the present monetary stringency and consequent general inactivity of trade. Lumber for building purposes in such cases is probably one of the things that feel the want of demand as much as any other commodity. Imported lumber does not usually cut a large figure here; and during the last year or two Canadian lumber has been held at such a high figure, apparently owing to the home demand, that it could not command attention. Excepting for flooring, and special timber in length and size in the more important buildings and for dock and railway use, it is not called for. The great consumption of lumber in Japan is supplied from native sources, cut to dimensions and of a quality such as has been generally in use for generations, and which is not likely to be displaced by foreign lumber cut in the usual commercial way.

ALEX. MACLEAN.

NEWFOUNDLAND.
REPORT OF TRADE COMMISSIONER.
(*Mr. E. D. Arnaud.*)

GAZETTE BUILDING, ST. JOHN'S, March 26, 1908.

MINERAL STATISTICS.

The following statistics of the mineral products of Newfoundland that have been raised and shipped for the year 1907 have been kindly furnished to me by Mr. James P. Howley, the Director of the Geological Survey. He informs me that it is not as complete as it might be in some respects, owing to the fact that several of the operators of the mines have failed to furnish the returns asked for by his department:—

Iron ore from Bell Island.. . . .tons	864,195	\$ 950,615
Copper ore from Tilt Cove mine.. . . .	48,044	240,220
Pyrite ore from Pilley's Island.. . . .	19,920	59,760
Gold (estimated in copper ore)ozs.	3,603	74,474
Brick manufactured.. . . .	500,000	4,000
Building and paving stone.. . . .		3,150

Total.. . . .		\$1,332,219
---------------	--	-------------

As compared with a total for 1906 of.. . . .		\$1,462,344
--	--	-------------

COPPER.

The discovery of a rich deposit of copper ore on the southeast side of Red Indian lake, near the mouth of Victoria river, on lands held by the government adjoining those belonging to the Harmsworth Company, has been brought to my attention by persons who claim to be well informed and may be regarded as reliable. The areas supposed to contain the deposit, and extending over sixteen miles of territory, have already been taken up by the Messrs. Harmsworth and their associates. This discovery is reported to have been made by a well known prospector who was formerly connected with the Tilt Cove copper mine.

Mr. Howley informs me that a deposit of zinc and galena has been found on the opposite side of this lake, on the lands belonging to the Messrs. Harmsworth, who are now engaged in constructing extensive pulp and paper mills at Grand Falls, on the Exploits river.

ST. KITTS, NEVIS AND VIRGIN ISLANDS.

REPORT OF COMMERCIAL AGENT.

(*Mr. S. L. Horsford.*)

St. KITTS, March 21, 1908.

SUGAR CROPS DAMAGED.

I regret to report that a cyclone of some severity passed over these islands on the night of the 7th and morning of the 8th instant, by which rather serious damage has been done to the sugar crops, the canes having been in some cases thrown down and broken, while in others whole fields were battered and badly shaken. The loss is variously estimated at from 10 to 15 per cent, but I am hoping that with prompt reaping it will be found not to exceed 5 per cent. There was also considerable damage to the shipping in the bay, all the small craft at anchor being driven ashore and in some cases smashed. Similar reports have reached us from Nevis and the neighbouring foreign islands of St. Martin, St. Bartholemew and St. Eustatius.

A hurricane in these latitudes at this period of the year is almost unprecedented. They are usually looked for only in July, August and September.

S. L. HORSFORD.

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR VICTORIA, SOUTH AUSTRALIA, WESTERN AUSTRALIA
AND TASMANIA.

(*Mr. D. H. Ross.*)

STOCK EXCHANGE BUILDING,
MELBOURNE, March 16, 1908.

AUSTRALIAN PROHIBITION OF OPIUM.

An interesting return was recently issued by the Commonwealth authorities showing what has been done by the Australian Customs Department in the administration of the opium importation proclamation of December, 1905. Taking the years 1906 and 1907 together, 188 opium smugglers (160 being Chinese) were dealt with; 2,863 pounds of opium were seized; and penalties to the amount of £3,326 were inflicted, of which £2,076 was paid and the balance worked out in prison. Of the rewards paid for conviction, informers received £260, customs officers received £71, and police officers £183. The ingenuity displayed in smuggling opium into Australia is remarkable and, despite the efforts made to combat the evil, it is generally admitted by the Customs Department that fairly large quantities are successfully landed to meet the demand of Chinese consumers from time to time.

AUSTRALIAN SMALL ARMS FACTORY.

The Commonwealth government has secured a site at Lithgow, N.S.W., for the erection of the first Australian small arms factory. At the outset the factory will be confined to the making of rifles, but later on the manufacture of shells will be undertaken. The latest type of the British War Office rifle will be the first weapon fashioned. It is the object of the government to be in a position to manufacture the bulk of the war materials required for Australian defence.

CORDITE TO BE MADE IN MELBOURNE.

It is announced by the Australian Minister of Defence that 120 acres of land has been purchased in the vicinity of Melbourne for the site of a cordite factory. The arrangements for the execution of the plans are now in an advanced state and the authorities are looking forward to obtaining principal supplies of explosives required from the local factory. Ball cartridges are supplied under special contract to the government by the Colonial Ammunition Company, Melbourne. With the establishment of small arms and cordite factories, the Australian government will have made practical headway in being comparatively independent of Great Britain for rifles and ammunition.

DISCLOSURE OF CONTENTS OF PATENT MEDICINES.

A strenuous fight is being made by the proprietors of patent medicines against the bill drafted by the Australian government to enable the Customs authorities to insist in certain cases on the disclosure on the label of the contents of imported medicinal preparations. The section of the London Chamber of Commerce which

watches over the interests of the owners of proprietary articles has been so much alarmed over the proposed legislation that a deputation was appointed to watch the measure's progress and to endeavour to secure its abandonment. The deputation is now in Melbourne and, at an interview with the Minister of Customs, suggested that their alternative to the proposed federal law is the proclamation of a schedule of drugs, the presence of which in any medicine or patent food should be absolutely prohibited.

VICTORIAN EXPORTS OF CHEESE.

Recently a consignment of 15 tons of specially selected Victorian cheese was forwarded to London for the purpose of being judged by an English expert. When the judging is completed the shipment will be sold and the exhibitor securing the highest number of points will secure the silver cup awarded by the government. The object of the Victorian government in holding the competition in London is to attract the attention of British buyers to the Australian article and to encourage the export trade.

SOUTH AFRICAN OATS IN AUSTRALIA.

The substantial arrivals of South African oats in Australia are of interest in more ways than one. The oats are of the Algerian variety, grown in South Africa from Victorian seed. The samples which reached Melbourne some weeks ago were generally equal to good feed, but a sample of oats just landed is heavy and equivalent to fairly good milling oats, comparing not at all unfavourably with this season's Victorian oats. Not only in oats, but in wheat, is South African production increasing. Mail advices state that import trade in Australian wheat is likely to be very much restricted for some months, because of the large native crop harvested in the Orange River colony and Basutoland, where a surplus of about 3,200,000 bushels is estimated.

SHORT CROP OF AUSTRALIAN DRIED FRUITS.

Contrary to the anticipations of growers, the 1908 crop of Australian leixias, sultanas and currants will—it is now estimated—not be much more than half the quantity marketed last season. Intense heat at a critical period in the growth is stated to be the cause of the short crop. Of the surplus available for export, preference is being given to Canadian and New Zealand buyers before the fruit will be offered elsewhere. Last year large quantities were consigned to London, but, this season, the reduced stocks preclude such a course being adopted. As a result of special inquiries, it is considered that all Canadian orders will be readily filled provided they are placed early..

COLD STORAGE OF FRUIT NEAR ORCHARDS.

More attention is being given by fruit growers throughout Australia to the advantages of cold storage for holding over fruit in good condition when market prices are unsatisfactory. The cold stores erected several years ago by the Victorian government as an experiment in storing fruit near the orchards, have proved so useful to local growers that additional storage capacity is to be provided to meet the demand for space. The rates charged at these stores near the orchards vary from two to three cents per bushel case per week. Experience has shown that it requires a minimum storage capacity of 10,000 cases to make a cold storage plant pay, because in the winter months the stores are empty and the earnings during 12 to 15 weeks in the summer are required to cover expenses for the year.

BEST TEMPERATURE FOR FRUITS IN COLD STORAGE.

The engineer in charge of the experimental cold stores for fruit, states that the best temperature for all fruits is 33 degrees F. Peaches, if kept over two or three weeks, do well in a temperature of 32 degrees. Apples ought to be graded and wrapped before being placed in the cool room, or the skin 'wilts.' Pears do better unwrapped. Peaches should also be wrapped if they are to remain in the cool chambers for several weeks. The humidity of the atmosphere in the cool chamber is important. It is controlled by being passed through calcium chloride before entering the chamber. This removes impurities and regulates the degree of moisture. Pears keep better in a drier atmosphere than apples, which require a fair amount of humidity. William's Bon Christien pears have been kept in perfect condition in the cool chamber for three months, so that under proper conditions this, the most profitable of all pears, should carry safely to London, although this has rarely been done. Soft fruits, as cherries, plums, apricots and peaches, keep well for several weeks without serious loss of flavour. It is found that fruit, after being taken out of the cold chamber, should be placed in a cool room, where its temperature may be gradually adjusted to that of the atmosphere.

EXPORT OF AUSTRALIAN FROZEN RABBITS.

The number of rabbits being received at the government cool-stores at Melbourne is not showing any tendency to increase. Yet under normal conditions larger quantities should now be coming forward. On the other hand, the English market for Australian rabbits is hardening at increased prices. The consumption of imported rabbits is very materially increasing in the United Kingdom. During 1905 that country imported about 593,545 crates of Australian rabbits. In 1906 the importations reached 907,324 crates, but about 250,000 of these were stored until 1907, in which year the importation was 843,463, and the fact that prices in England are now rising would tend to show that the 1906 surplus and the 1907 importations have been used. This shows a marked increase in consumption. It is strongly urged by persons who have had years' experience of the trade here that the largest importation of rabbits into the United Kingdom does not represent the consumption of one imported rabbit per annum per head of population, and that the possibilities of the trade's increase lie within far wider limits, as the article is one of the cheapest forms of meat.

THE AUSTRALIAN CUSTOMS TARIFF.

The Commonwealth Senate has been engaged upon a revision of the new Customs tariff since January 22 last. Less than 180 items—out of a total of 450 items—have, so far, been debated. At the present rate of progress, it will be well on in April before the Senate has concluded its deliberations, after which the tariff, with the amendments proposed, will be referred back to the House of Representatives for final revision. Until such time as the tariff is adjusted, business will continue to be somewhat unsettled.

AUSTRALIAN TRADE CONDITIONS.

Taking an all round view of the position, business conditions throughout the Commonwealth are sound, though trade undoubtedly lacks the briskness desired by importers. Heavy rains have recently fallen over a great area of country, which will provide autumn feed for sheep and cattle besides making the ground suitable for ploughing. Butter production has greatly declined owing to a dry season in the chief dairying centres. Next to the weather, the most important factor in Australian economic conditions is the prices obtained abroad for wool and other produce. While the customs revenue shows an increase of £1,500,000 in eight months, as compared with the previous period of last year, it cannot be denied that general trade has recently been considerably depressed in the principal Australian importing centres.

D. H. ROSS,

AUSTRALASIA.

REPORT OF TRADE COMMISSIONER FOR NEW SOUTH WALES, QUEENSLAND AND NEW ZEALAND.

(Mr. J. S. Larke.)

THE ROYAL EXCHANGE, SYDNEY, March 16, 1908.

NEW ZEALAND TRADE.

A preliminary statement of the trade of New Zealand for 1907, shows that last year the new Dominion did an expanding trade though, in this instance, the imports have increased to a larger extent than the exports. The figures for the trade of the past three years are:—

	1907.	1906.	1905.
Imports..	£17,302,796	£15,211,403	£12,826,691
Exports	20,071,609	18,095,137	15,655,947

The imports show an increase of nearly two and a quarter millions, a very much larger increase than in previous years. The increase in exports was slightly over two millions, a little less than the increase in 1906. The increases have been very general; in wool, meat, tallow, butter, cheese, skins and hides. In grains and flour there was a considerable decrease, in hemp a slight increase. The increase in cheese is very striking, being £664,122, as against £341,002 in 1906 and £205,171 in 1905. The exports, therefore, have increased more than three-fold in two years. There was a decline in the export of gold of over 10 per cent, the export being a little over that of 1904.

There is a probability that the continued drought will at once have its effect upon the exports, particularly the exports of frozen lamb. The harvest has not been affected by the drought as much as was feared and to date the reports are that it will be fair. With a diminution in exports, there must follow a like decrease in imports. The trade of 1908 is, therefore, likely to be below that of 1907. Recent advices state that the drought has been broken and there is a probability of an improvement in the conditions that have prevailed for some months.

AUSTRALIAN TRADE.

The returns of the imports and exports for the month of December last and for the month of December, 1906, are as follows:—

	Imports.	Exports.
1907..	£5,121,768	£ 8,100,629
1906..	4,015,165	10,081,698

The reduction in exports of nearly two millions sterling in the month is in accordance with the anticipations which have appeared in previous reports, the decline being mainly in wool, meat, butter and metals, except gold. Similar declines will be reported in January and February, though the proportion may not be the same. There must follow, of course, a decrease in imports, but it will be a little time before the decrease in imports is proportionate to the decrease in exports.

The weather has been, during the month of February, most favourable, though there are a few spots where there is a complaint of lack of rain, yet the rainfall generally has been sufficient and in most cases heavy, promising an excellent winter. Trade has naturally quietened, but there is no serious complaint and accounts are well met.

INCREASE IN TAXATION.

A recent return by the Federal statistician shows that Australian taxation has materially increased during the last seven years. The total taxation for 1900 was £10,262,746, or £2-15-3 per head; for 1907, £13,635,711, or £3-16-2 per head. In Western Australia and Queensland there were decreases in the amounts paid, but the taxation on New South Wales has been increased heavily. The following are the figures per head for the various States:—

	1900.			1907.		
	£	s.	d.	£	s.	d.
New South Wales.. . . .	1	19	1	3	4	11
Victoria.. . . .	2	13	1	3	2	2
Queensland.. . . .	4	1	7	3	8	0
South Australia	2	10	3	3	2	2
Western Australia.. . . .	6	4	0	4	13	2
Tasmania.. . . .	3	4	3	3	8	0
Commonwealth.. . . .	2	15	3	3	6	2

The chief increase has been from the tariff, showing a 26 per cent advance with a 10 per cent increase of the population though state taxation has relatively increased higher, being 54 per cent above that of seven years ago. The figures are likely to be higher still at the end of this year owing to the increase in duties levied.

MEETING OF THE IMPERIAL CHAMBERS OF COMMERCE.

The triennial meeting of the Chambers of Commerce of the empire is set down to be held in Sydney in September of next year. The Sydney Chamber of Commerce has already taken steps to give a characteristic welcome, and it will be aided in its efforts by the government of the Commonwealth and the governments of the several States. There can be no doubt that this event will be so conducted as to afford unusual opportunities to become acquainted with the resources of Australia and to meet its chief business men. It is to be hoped that the boards of trade of Canada and manufacturers' associations will take advantage of this opportunity and a large number of Canadian representative men will attend the conference. In this way they will be enabled to do very much for the trade of Canada. September may not be the most convenient month to leave their business, but it is the delightful season in which to visit Australia and the trip could be made to repay their sacrifice.

SHOULD BE NOTED.

A London firm that did a large indent trade with Australia a short time ago failed. The last shipments made by it were covered with drafts attached to the bills of lading and other documents, the drafts covering freight as well as the cost of goods. Upon the arrival of the goods it was discovered that the freight had not been prepaid and firms, who were compelled to take up their goods, had to pay freight twice over. It would have recourse upon the assets of the firm but only as ordinary creditors and the amounts that will be received will be but a trifle.

Another incident of not unfrequent occurrence in trade is that goods shipped to Australia are covered by an insurance policy in which it is stated that they are on

board a certain vessel. At the last moment that vessel was unable to take the cargo or only a part of it, the shipment or the balance of it being sent by the next vessel. In such a case the goods are uncovered and the insurance policy is of no effect.

Canadian exporters should, therefore, note that where their conditions are to pay freight and cost of insurance that they receive the steamship company's receipt of having received the freight in advance and also that the insurance policy is in agreement with the bill of lading. In case that their New York or other agents should fail to do so, the consignee would look to the consigner for any loss that he may have incurred through the failure to observe the conditions of shipment.

NEW YORK HOUSES.

A Chicago trade paper recently sent out a warning that New York export agents were guilty of securing and shipping inferior goods to that ordered, thus making an extra profit, and advises that whenever foreign orders are sent to New York agents, a copy of the order should also be sent direct to the manufacturer from whom the goods are to be purchased. In this way fraud could be prevented. It is possible that this is true of some of the New York houses and it may occur without the intention of committing a direct fraud. There have been cases where complaints have been made that second shipments of Canadian goods have not been equal to samples or those first sent. There have not been many such cases. One or two came through the New York houses, but no redress could ever be had from the New York agent or from the Canadian manufacturer. It has never been ascertained whether the middleman or the manufacturer in this case was to blame.

An inducement to transactions of this nature is the effort made by the representatives of New York houses to secure trade made by direct agents or representatives of Canadian manufacturers. They assure the Australian buyer that they can secure the goods at a less price than is quoted to him here. In order to carry out these terms the New York houses sometimes take inferior goods at the lesser rate and then throw the responsibility upon the manufacturer. Much caution must be exercised in all transactions of this kind. The probability is that when such goods are shipped to this country it closes the business of the Canadian firm.

A CHANGE IN BUYING.

The *British Australasian* of January 9, says:—

'Little surprise has been expressed by manufacturers and agents in England at the announcement which has reached them that at least one of the largest Australian houses, who have for years past maintained a large establishment on this side for the purchase of goods for the markets of the Commonwealth, have decided that in future orders for the greater part of their requirements will be placed on "indent" with the manufacturers. The meaning of this is that goods will be selected from the samples which are sent out. The expense of the buying in England has increased considerably, and as the price of nearly every line is higher, it was felt that some cutting down of expenses had to be undertaken.'

This is an indication of some change in the methods of buying in Australia. Large houses had either their own establishments or commission agents in England, on the continent and in New York and did their buying through them, frequently refusing to purchase from travellers who visited Australia. There were firms always open to buy from representatives here, but many of the older firms gave them little welcome. Canadian travellers suffered as well as those of other countries in this respect. This change will be to their advantage.

NEW ZEALAND DEMAND FOR TIMBER.

Judging from inquiries and information to hand there is an increased demand for British Columbia timbers in New Zealand, but prices in the United States and

Canada seem to have fallen very much, and some recent shipments have been very far below the quotations of the agents of Canadian mills. One representative of British Columbia mills writes:—

‘I have had a large number of inquiries for timber and several good orders went forward by the last Vancouver mail. There is no doubt in my mind that this timber business is coming to stay as the New Zealand timbers are getting worked out and local millers are rather anxious to preserve the standing timber they have got, as they expect that a greater scarcity will bring much higher prices in the future, and, I think, they are quite right. In the far South, Oregon pine as yet has not had much chance, as there is a plentitude of white pine, which is considered equally good, but Wellington and Christchurch will buy largely in the future. I have given this business very much attention, but some of the millers are rather careless. To give you an idea, some time ago I telegraphed to Vancouver to quote for laths. I received no answer, and consequently this business did not come off. By mail I received the cool reply that the mill had not answered because at the time they were not prepared to ship a million lath. Now, just think of it, not deeming it necessary to answer by cable under such circumstances.’

I have frequently called attention to the importance of replying promptly to inquiries of this nature. If they are made by cable, a cable reply should be sent, even if business cannot be entertained at the moment. The failure to do so creates a feeling against a dilatory correspondence that would very much interfere with the prospects of business in the future.

NEW ZEALAND WEALTH.

The Australasian governments published statistical details of many matters that are not so dealt with in Canada, amongst which is the public and private wealth of the country. The Registrar General of New Zealand has just made calculations which lead him to state that the private wealth of New Zealand is £335 10s. per head. He reaches this conclusion by a study of the probate returns in five years' period. His report indicates an increase in the private wealth in ten years of £134,646,157, which shows an average increase of £97 per head. New Zealand is wealthier to-day than ever in its history. His statement for a series of years of the private wealth of the country is:—

PRIVATE WEALTH.

Year.	Amount.	Average per head.
1893..	£156,058,273	£232
1895..	152,918,021	219
1897..	183,781,780	252
1899..	217,587,481	288
1901..	229,587,916	291
1903..	256,402,400	308
1905..	258,710,000	293
1906	304,654,000	335

The value of public property inclusive of lessees' interest in lands and improvements, is shown to be:—

Crown lands	£18,918,000
Local authorities' lands	5,851,000
Educational lands	4,646,000
Church and other lands	3,392,000
Railways	24,092,000
Other public works	5,142,000
Total	£62,041,000

RAISINS.

Information to date reports the crop of lexias and sultanas to be only about one-third of what was anticipated. There will, therefore, be no quantity for export this year. A larger number of currant vines have come into bearing but there will be no currants to export. The export of these dried fruits from Australia will be periodic until the larger irrigation areas now in preparation will be productive, and this will be six years hence. In ten years Australia should have a fairly steady quantity of dried fruits for export to Canada.

J. S. LARKE.

BRISTOL.

REPORT OF TRADE COMMISSIONER.

(*Mr. W. A. MacKinnon.*)

BRISTOL, March 31, 1908.

CANADIAN PROVISION TRADE.

As a new season approaches it may be interesting to have the views of some leading importers in this district regarding the provision trade during the past twelve months. Taking it all round there has not been much complaint of deterioration as regards quality, the chief difficulty having been shortness and irregularity of supplies. Prices have been so high that importers state their profits have almost entirely disappeared.

BUTTER..

The most striking feature of the trade has been the recent scarcity in Canada, accentuated by a similar shortage in Australia, the falling off in exports to the United Kingdom having run into many thousands of packages. Though on the whole the quality has been well up to the mark there has been in some cases a complaint that this year's output was not so good as formerly. It is strongly urged that Canadian farmers ought to pay more attention to this article, and make strenuous efforts to retain their trade with Great Britain, and if possible to increase it. If supplies become irregular and unreliable it will be found that the dairy industry in Siberia and elsewhere will be so developed that there will be no further dependence upon Canadian butter for this market.

STORAGE AND PACKAGES.

Complaints have been made that butter has been held too long in cold storage in Canada, and it is suggested that it should always be shipped as soon as convenient after manufacturing, the date of manufacture being stamped on all packages by government officials. Efforts should be made to improve the boxes, so that they may compare more favourably with those from New Zealand and Australia in the matters of neatness, general appearance and durability.

UNIFORMITY.

It is urged that greater efforts should be put forth to secure uniformity of quality, flavour, colour and so on throughout the packages comprising shipments under the same mark.

CHEESE.

Though cheese shipments have not been quite so large, the decline in quantity was not so great as that of butter. Quality has not been quite up to the mark, some importers missing the mellow nutty flavour which is so much appreciated, but on the other hand there were no 'garlic tasting' lots such as were in evidence the previous summer. Apart from this the quality has been satisfactory, though there is a general complaint of cheese being shipped in too green a state; the loss of weight owing to shrinkage during transportation has to be borne by the importer, and at times this has been so great as to wipe out all profit.

DATE OF MANUFACTURE.

Here again the wish of the trade is, as formerly represented, that every cheese should be stamped with the date of making; the output to be subject to government inspection so as to ensure the correctness of such date stamps.

BACON.

During nearly the whole year very high prices were experienced, making it difficult to get a profit, and in the end inducing many buyers to take bacon from other countries; so much so that even when prices fell they did not stimulate anything like a brisk demand for the Canadian product. A satisfactory demand would, however, be created by a considerable period of low values.

IRREGULAR QUALITY.

Inquiry is made as to the cause of Canadian sides arriving during the summer months in a slimy state and stale in appearance. Another complaint is that some bacon is too fat for the general trade. Irregularity of supplies and the small quantity received have led to the question whether Canadians have seriously laid themselves out to get a fair share of this tremendous trade.

EGGS.

The complaint here again is that supplies have been quite inadequate. Some brands have earned for themselves a very high reputation in the market, while others are so irregular as to be unreliable.

COMPETITION IN NEW ZEALAND.

The head of an important firm comments upon the assumption made in certain quarters that because the production of cheese in New Zealand for some years showed little expansion, Canada need not regard that country as a serious competitor. It is pointed out that the output of cheese in New Zealand rose from 5,870 tons in 1906 to 8,579 tons in 1907, and there is good reason for expecting that this year's production will amount to 15,000 tons or more. This dealer recommends an increase in the production of both cheese and butter in Canada so that, after providing for a rapidly increasing population, there will still be a surplus for export, equal to the average of the years 1905 and 1906. He also suggests that by an arrangement between Canadian exporters and the New Zealand Dairy Association production might be regulated so as to avoid competition and secure reasonable prices in this market. He suggests that 'if New Zealand continues to increase its output of cheese, the bulk of which arrives here between January 1 and June 1, it would be much better for Canada to stop making spring fodder and October and November cheese, and turn out butter instead. The additional supplies of butter on British markets in October and November would realize good prices,' all of which is submitted for the consideration of those chiefly concerned.

GOVERNMENT INSPECTION.

It will not escape attention that the trade here recommended government inspection, government stamping of dates, and government supervision generally, as a remedy for most of the faults of which they complain, and it must be supposed that their confidence in this remedy arises partly from their experience of inspection under the Fruit Marks Act, and partly from the success of government supervision in New Zealand. This feeling has been strongly accentuated by the declaration of the South Australian Premier, who recently paid Bristol an official visit, to the effect that it is the aim of his government that no article should be exported which was not in every way creditable to South Australia.

APPLES.

Last month I pointed out (Weekly Report No. 216) that Canadian apples still hold a leading place in the markets in spite of the unusual complaints as to poor quality and irregular grading. It gives me great pleasure this month to report another satisfactory feature of the trade. A Bristolian wishing to get some apples which would be particularly good, ordered, on my advice, some boxes of Northern Spy, put up by the Mount Nemo Fruit Growers' Association, Mount Nemo, Ontario. The fruit turned out exactly as represented, with, I believe, not more than one or two damaged apples in each box. This is the sort of trade which can be extended almost without limit, just so long as everything is strictly as represented, the quality and packing being both maintained at the highest standard.

COLONIAL GRAPES.

Fruit growers might do well to consider the possibilities of placing certain varieties of grapes on this market. I recently sampled some from South Africa, the variety being that known as Moleno. The grape is a black one of ordinary size, though the average bunches were large. The quality was decidedly inferior to that of some of the Rogers (Black or Red) which are so popular in Canada. The undoubted advantage of the South African variety was the thickness of the skin, which enables it to be transported long distances without damage. The grapes are also very firmly attached and I did not see any cracked or broken loose.

THE PACKAGE.

This fruit was put up in ten-pound boxes of very light material, the bunches being very carefully packed in excelsior, which, however, was of the finest grade, and soft enough not to injure the fruit.

W. A. MacKINNON.

BARBADOS.

REPORT OF TRADE COMMISSIONER.

(*Mr. E. H. S. Flood.*)

BRIDGETOWN, March 26, 1908.

SUGAR.

Owing to the dry weather which has prevailed throughout the West Indies and British Guiana from October last to the present month, it is estimated that the sugar crop will fall short about fifteen per cent. In Barbados, where the rainfall has been the smallest for sixty years, it is now known that the crop will fall nearly 5,000 tons below last year's.

Advices from Demerara indicate that the shortage there as compared with last year will probably average fifteen per cent. In St. Kitts, the crop has been further reduced by the heavy gale which visited the island on the 8th of March, and which did considerable damage to standing cane. The damage to the young cane cannot yet be accurately estimated.

Reports from Trinidad show a large general crop and a prosperous year, but a shortage in sugar due to unfavourable weather conditions since the 1st of January. The drought was accompanied with considerable heat, which dried up the cane. Shipments up to March 1 are heavier than last year, which, however, was below the average of other years to that time, but are over 30,000 bags less than in 1906. Antigua suffered somewhat from the gale in March, but it appears that the crops are but little damaged by it, and that the sugar crop will be up to the average.

Jamaica exports also show a decrease of about ten per cent.

The Cuban supply, which controls prices on this continent, is also estimated to be from 275,000 tons to 300,000 below last year's.

In view of the general shortage in sugar, prices have advanced locally. Barbados sugar, which averaged last year \$1.69 per 100 pounds, is now quoted at \$2, and the market is strong. An equal advance is reported for Demerara crystals.

MOLASSES.

Barbados now supplies Canada with three-fifths of the molasses imported from the West Indies, and if the vacuum pan molasses is eliminated the ratio approximated to three-fourths. The shortage in the sugar crop here, will react on the molasses crop, but the exact extent is not yet accurately estimated.

Lard (imported pure refined lard), in tierces, firkins or other packages, tons	1,227	848	1,345
Lardine and compound, tons	39	108	74

SWEDEN, NORWAY AND DENMARK.

REPORT OF COMMERCIAL AGENT.

(Mr. C. E. Sontum.)

CHRISTIANIA, NORWAY, GAÜBERGD No. 4, April 1, 1908.

THE GRAIN IMPORT OF DENMARK.

The total weight of the surplus import of corn in 1906 and 1905 amounted respectively to 1,670 and 1,293 million pounds, and the corresponding values to 21·4 and 17 million dollars. This gives a rise in quantity of about 30 per cent and in value a rise of about 25 per cent. The difference between these two percentages is derived partly from the rise falling upon grain for fodder, which is cheaper than the import of grain for bread, partly from the decline in the prices for the two most important of the imported cereals, namely, corn and wheat; for the other cereals there was paid in on an average during that year somewhat more than in 1905. The increase of quantity next after corn (the rise in the import of which amounted to 405 million pounds) was particularly large in the import of wheat. Of oil-cakes, bran, and likewise oats, the quantity imported may be said to have been stagnant. Of rye, if unground rye is taken under one heading, there was a decline in the surplus import of 15 million pounds, and of barley a decline in import of about 80 million pounds.

THE SCANDINAVIAN WOOD-PULP MARKET.

Opinions seem to be divided among the makers of mechanical pulp as to the actual state of the market for the immediate future. While some of them say, that the price is going down, others hold that the market has recently become firmer. Anyhow, few sales have been reported the last week or so in Norway, while Swedish West Coast makers have made quite a number of good sales.

The present apparent deadlock is mainly due to the necessity of adjusting the late very high prompt prices to a reasonable value for the current year. The consumption is very great, and the opinion of buyers as to the situation is best shown by the fact that a great percentage of the output of 1909 and 1910 has already been sold.

Cellulose.—The bulk of the production of the new Swedish mills is in ordinary strong sulphite; for this quality there is reported a rather heavy fall, but the value of easy bleaching and special qualities of strong has only to a very moderate extent been affected by this fall.

THE LABOUR MARKET OF NORWAY IN 1906 AND 1907.

The improvement of the labour market of Norway which commenced in 1905, and which was particularly noticed during the latter part of 1906, also continued during 1907. This is best shown by the reports from the Christiania Employment Office, an official institution, where the proportion of the number of labour-seeking men and vacancies has bettered itself considerably during the last two years. The estimated surplus of idle hands in Christiania was thus at the close of the years 1905, 1906 and 1907: 2,809, 1,393 and 868 respectively. In the cities of Bergen and Stavanger on the west coast of Norway with their extensive fish canning factories, there were among the organized canners 10·3 per cent idle hands at the close of 1907 against 20·7 per cent in 1906. At the different factories of Norway, that are subject to inspection and statistics, there was on December 31, 1906, employed 91,425 hands as compared with 86,524 at the same time in 1905.

IMPORT OF CERTAIN ARTICLES TO SWEDEN IN 1907.

The following is a preliminary statement of the import to Sweden in 1907 of certain articles of interest to Canadian exporters, and embraces only such goods that have passed the custom-house weights, and not goods in store at the free ports.

	Tons.
Pork, all kinds.	670
Grass and clover seeds.	439
Flaxseed.	674
Yarns, woollen, all kinds.	161
" cotton.	107
Hides and skins unprepared, all kinds.	812
" sole leather, etc.	89
" other kinds.	91
Furs, prepared, loose, all kinds.	4.5
Hops.	22.7
Bran, all kinds, for cattle food.	9,792
Canned goods, all kinds.	36.8
Meat, all kinds.	209
Machinery, tools, etc., not including steam engines or sewing machines.	Value, 41.4 million dollars.
Oleomargarine.	52
Oil cases.	12,445
Cheese, all kinds.	37.7
Paper, all kinds.	192
Oats, whole, unground.	4,064
Wheat, whole, unground.	19,113
Wheat flour.	1,131
Sewing and knitting machines.	Value : \$21,600
Tallow.	513

C. E. SONTUM.

NEWFOUNDLAND.

REPORT OF TRADE COMMISSIONER.

(Mr. E. D. Arnaud.)

GAZETTE BUILDING, ST. JOHN'S, April 8, 1908.

FISH DRIER.

Through the courtesy of Hon. John Harvey I have been afforded an opportunity to inspect a new style of fish drying apparatus that has recently been erected on the premises of Messrs. Harvey & Co., of this city, and is now, I understand, patented by Mr. John Clouston, of St. John's, who constructed the drier under Mr. Harvey's directions.

In conversation with Mr. Harvey he explained that while the initial cost of his plant was very much less than one of similar capacity operated by means of hot water, the consumption of fuel was by actual test from $\frac{1}{2}$ to $\frac{1}{3}$ less, and the result in the making of the fish was more satisfactory than by other methods. A brief description of Mr. Harvey's plant will probably be of interest to fish dealers in Canada, especially the Maritime Provinces and British Columbia, and may induce them to inquire into its merits. It may be roughly described as an oblong structure of close fitting boards into which dry heated air is forced by means of an electrically driven fan through horizontal metal perforated piping between which the fish are spread on wire trays, the air after passing over which is conducted back through wood air-ducts to the furnace to be used over again. Ventilation is had by metal air-ducts opening close to the floor of the drier, and leading up through the roof which removes any moisture evaporated from the fish. This drier is designed to spread 70 quintal of small or 90 quintal of large fish, and the furnace consumes one ton of hard coal a week. Mr. Harvey informed me that it has been in operation since December last, and has given very satisfactory results.

SEALING VOYAGE.

The first of the sealing steamers to return to port, the *Adventure*, arrived here yesterday with 27,000 seals, and reports an estimated catch for the whole of the fleet of 139,600 seals, which is about 100,000 below the average. She reports also the loss of the steamers *Walrus* and *Panther*, wrecked in the ice, and damage more or less severe to several other vessels owing to violent storms that were encountered while in the ice.

E. A. ARNAUD.

MANCHESTER.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. MacNamara.)

CANADA CHAMBERS, 36 SPRING GARDENS,

MANCHESTER, ENG., April 15, 1908.

EFFECT OF RECENT PATENT ACT.

The press of Great Britain, irrespective of politics, are congratulating the government on the beneficial results of the clause in the Patent Act, which took effect on the first of January, 1906, and which provides that 'at any time not less than four years after the date of a patent, and not less than one year after the passing of this Act, any person may apply to the Comptroller for the revocation of the patent on the ground that that patented article or process is manufactured or carried on exclusively or mainly outside the United Kingdom.' It is said that agitation to effect this result has been kept up for the past twenty years, and that the present relief though tardy, is heartily welcome, and is destined to prove of great advantage by the erection of works in the Kingdom and the employment of British labour. Already a great German chemical firm has purchased 24 acres of land at Port Sunlight for the purpose of manufacturing their specialties hitherto made in Germany and sent into England. One of the largest American boot and shoe manufacturers has commenced building extensive works at Leicester, and when completed will employ hundreds of artisans. It is said further, that a number of foreign holders of British patents are making inquiries for and investigating, the best possible locations for the manufacture in England of the patented article.

PATENTS GRANTED IN ENGLAND.

It is stated that England grants several thousand patents yearly to foreigners. If only 10 per cent of these are of real value, the Act means that hundreds of foreign patentees must yearly establish works in England, or grant licenses to British manufacturers. Under the old Act a monopoly was given in England for only 14 years. It was assumed that after the lapse of that period the patent became public property. What actually happened was, that the foreigner secured a perpetual monopoly in his own country, and shipped his productions to England because there was no machinery suitable for taking it up, and no men trained for the special purpose. The leaders of commercial activity in Great Britain are looking forward hopefully to the great results to be achieved by this new Act.

STAGNANT CHEESE MARKET IN ENGLAND.

The following report is furnished by one of the most important firms in the trade:—'The cheese market for the past few weeks has been very disappointing to holders on this side, trade having remained in an almost stagnant condition since the beginning of the year, and so holders of September cheese, bought some time ago, would like very much to be able to see some of their money back again. This is more than anything the result of the New Zealand influx. This colony has shipped a good

quantity into London, and it is finding its way all over the United Kingdom. But for this district it does not take so well as it is rather too stiff and does not show enough "meat" to suit the Manchester district. If, however, the New Zealand makers catered for this market by making the class of goods saleable here, there is no doubt it would have a very serious effect upon the Canadians, coming as they do at a time when Canadians have ceased being made. Importers will, therefore, have to take this new competition for the British markets into serious consideration, if the shipments continue in anything like the quantity they have been doing during the past season.'

Reports from Canada state that the season there is backward, and while full prices are being asked for fodder cheese, they are absolutely of no use at the time of writing. Prices will have to show a material reduction if the trade is to be any good to anybody. Prices are at a very awkward level indeed, and with many in the trade selling at 7d. retail, there is very little profit left for the grocer.

SHIP BUILDING DECLINING.

According to 'Lloyd's Register,' excluding warships, there were 415 vessels of 487,501 tons gross under construction at the close of the first quarter of this year. Of those, 357 were steel steam vessels, with a gross tonnage of 839,446. The tonnage now under construction is 101,000 less than that which was in hand at the end of last quarter, and 459,000 tons less than that building 12 months ago. No such decrease in the shipbuilding industry during a period of twelve months has occurred since September, 1884, when the reduction in tonnage as compared with September, 1883, amounted to over 469,000 tons.

The latest returns at Lloyd's regarding foreign shipbuilding show that Germany is constructing 53 vessels, the United States 49, Norway 37, Holland 36, France 24, and Austria-Hungary 14, whilst various other countries have smaller orders on hand.

DECREASE IN EXPORTS AND IMPORTS.

The Board of Trade returns for March recently issued show a decline, amounting to £9,500,000. The imports totalled £52,115,259, a decrease of £5,625,662 as compared with March, 1907. The total exports amounted to £38,858,679, a decrease of £3,974,615, as compared with same month last year.

P. B. MACNAMARA.

BARBADOS.

REPORT OF TRADE COMMISSIONER.

(Mr. E. H. S. Flood.)

BRIDGETOWN, April 13, 1908.

BOOT AND SHOE TRADE.

Careful inquiry among the leading houses in the boot and shoe trade here, as to the smallness of the stock of Canadian shoes to be found on their shelves, reveal some facts that are worthy of attention by our manufacturers. Owing to the heat of the climate in the West Indies, boots and shoes of light weight are more comfortable to wear and find readiest sale. The English and United States makes, which are shown in the stores, are of quite light weight and material. Tan leather and white canvas divide equally with black vici the demand in men's shoes. White kid is much worn by the ladies, and at certain times of the year, tan calf and vici.

SUGGESTION TO BOOT MANUFACTURERS.

Canadian manufacturers have neglected this market altogether, judging from the showing. They do not seem to have studied the requirements of the climate nor the styles in vogue. Their travellers have not come often enough to learn what is wanted, nor have they remained long enough when here, to familiarize themselves with local conditions. It is said by the dealers that Canadian samples of shoes are too heavy, and their patterns unlike the English and United States patterns which the customers are accustomed to see and consider desirable. English houses send out, together with their own line, samples of Austrian shoes, and are getting the greater part of the trade. The Australian light make shoes shown here are very stylish and are much liked.

BARBADOS TRADE RETURNS.

That the trade is large enough in volume to justify more attention being given to it, may be gathered from last year's returns taken from the Barbados blue book:

IMPORTS OF BOOTS AND SHOES.

Into Barbados—1906-7.

United Kingdom.. . . .	£ 7,303	3	3
United States.. . . .	4,406	0	2
Canada.. . . .	236	15	3

The returns from Trinidad and British Guiana also show how small a hold Canadian manufacturers have on these markets, and the possibility there is for largely increased business:—

Into Trinidad—1906-7.

United Kingdom.. . . .	\$77,204	05
United States.. . . .	19,716	
Canada.. . . .	632	

Into British Guiana—1906-7.

United Kingdom.. . . .	£77,204	05
United States.. . . .	33,833	97
Canada.. . . .	342	60

OPPORTUNITY FOR CANADIAN TRAVELLERS.

I have pointed out in my recent reports how desirable it would be to have more frequent visits of representatives with samples of goods from Canada, and how favourably these representatives would be received. In no line would there be a better opportunity of creating business than in the boot and shoe trade. If systematically followed up, good results would be certain.

RETAIL TRADE IN BARBADOS.

In Barbados, the retail shoe trade is not specialized as it is in our Canadian and American cities. All business is done much in the same way as in our out-of-town stores, though in some cases, on a larger scale. Each firm carries in stock 'a little of everything,' so that boots and shoes are likely to be found in every shop. Owing to the limited range shown by the few English and United States travellers who are getting the business, there is only a small variety to be found, and the same patterns are repeated in every stock. Barbados could support two retail boot and shoe stores. An excellent opening is offered for Canadian firms to establish branches here which, if properly managed, would command a large share of the retail shoe trade.

The imports of boots and shoes into Barbados last year amounted to nearly \$60,000, which is not as great as in some of the other colonies, due partly to the number of small shops doing custom work. These conditions would change, were the retail trade to be introduced and conducted as it is in our cities.

E. H. S. FLOOD.

LEEDS AND HULL.

REPORT OF TRADE COMMISSIONER.

(Mr. J. B. Jackson.)

NORTH BRITISH AND MERCANTILE AGENCY,
EAST PARADE, LEEDS, ENG., April 15, 1908.

FALLING OFF IN ORGAN TRADE.

It is a matter of some surprise to dealers in this district to find how the organ as a musical instrument, has been waning in popularity during the past five or six years. Indeed, it is declared that there are scarcely two-thirds of the organs sold to-day that were sold six years ago, and this would appear to be somewhat borne out by the exports of these instruments from Canada to Great Britain which, during the past five years, have been as follows:—

Year.	Number.	Value.
1903.	4,824	\$269,733
1904.	3,612	200,888
1905.	3,206	174,895
1906.	2,858	157,704
1907 (nine months).	2,648	141,165

At the same time, however, it is very gratifying to know that the Canadian 'makes' fully uphold their reputation in the trade that remains, so much so, in fact, that the sales of Canadian-made organs are said to much exceed on an average, the instruments sold of home and foreign manufacture.

CHEAPER PIANOS THE CAUSE.

It must, of course, be remembered that the above only represents the condition of the trade in Yorkshire, because the organ will meet with a varied appreciation as a musical instrument in different parts of the country according to the character of the people. An almost general opinion is expressed by the dealers here, however, that the cheap piano has a good deal to do with the decline of the organ. Indeed, it is peculiar to relate that the only people who still show a decided appreciation for the organ are to be found in the colliery and mining districts. Then again, seeing that a cheap piano can now be purchased at as low a price as twelve guineas, the working classes, who previously went in for an organ, are now showing a preference for the cheap piano, as they are inclined to look upon it as being more 'up-to-date.'

CHEAPER ORGANS A REMEDY.

As before mentioned, Canadian—or as they are called here 'American' organs—still enjoy the largest sale in the present trade, as English 'makes,' in the opinion of the dealers, are too expensive to appeal to the working classes in comparison with the increasingly popular cheap piano. Opinions which have been given, however, show that if the trade is to be revived to its former level a new spirit must be infused into it. As it has already been shown, the majority of organs disposed of at the present time are sold to the working classes, and to counteract the increasing popularity of the cheap piano among this class, it is suggested that a cheaper-priced organ would perhaps meet with a better reception than the average ten-guinea instrument. In this connection, it is said that as a considerable part of the trade done in pianos is on the credit system, it would be much easier after the buyer has paid off the account on this instrument, to induce him to go in for a cheap seven or eight guinea organ on the same system. The success of a particular 'make' too, rests entirely with the manufacturer in getting a name for it amongst the public, as there are few other trades so dependent upon personal recommendation as this one. Once a buyer is recommended to go in for a certain 'make' and becomes impressed with the idea that it is the best, rightly or wrongly, it is seldom that he will be put off with any other.

EXPENSIVE ORGAN TRADE FLOURISHING.

There is, however, a very good trade being done in the more expensive styles of organs, suited for the music room of the larger houses. These must be fully up to date, and the general appearance must be neat, attractive and in keeping with the English ideas of furnishing in such homes. I am pleased to see that some of the Canadian firms fully appreciate this demand and are sending here just the class of organ required to meet this demand.

OPENING FOR CANADIAN-MADE PIANOS.

Inquiries made in well-informed circles show that openings in this country for Canadian-made pianos do occur, but for this trade to be successful, the demand must be catered to in every minute detail. Manufacturers in Germany, who now send across a large number of these instruments every year, have realized this to the full, and to this is to be attributed their success in the trade. In the first case, the popular demand is for a small-sized case of about 4 feet 2 inches or 4 feet 3 inches high, and the general appearance as regards build and ornamentation must conform strictly to English ideas. German manufacturers are sending across an instrument exactly in accordance with these requirements—an instrument, which, it is said, would, from its appearance, be little appreciated in the country of its manufacture. The piano to suit the demand of the working classes in this district, must, for its first consideration, be cheap, and secondly, of an appearance calculated to appeal to the popular taste. Indeed, the latter is looked upon by some dealers to be of more importance for this class of trade than the tone of the instrument itself.

IMPORTATION OF OIL CAKES.

It should interest Canadian manufacturers of oil cakes to know, that notwithstanding that Hull is looked upon as the chief producing centre of cattle-feeding cakes in this country, still, at the same time, every year witnesses a large importation of foreign-made oil cakes, the average amount for the past six years being 25,788 tons per annum.

There appears to be no reason why Canada should not enjoy a larger share of this trade. The difficulty centres round the fact that the consuming season ranges from October until March whilst the cattle are indoors, during which period, direct steamers from Canadian ports to Hull are not so frequent as at other times of the year. At the same time, however, the demand all through the year is entirely dependent upon the position of the market here, and there is no reason to doubt but that opportunities will occur in the future to introduce Canadian productions.

CANADIAN SHIPMENTS PRACTICABLE.

Buyers in many parts of the country look to Hull for supplies of these cakes and it is simply a question of Canadian manufacturers delivering their goods at a price which will compete favourably with the shipments from other sources to enable them to obtain a foothold in the trade. In this connection it may be practicable to send freights to Hull in the winter season via United States ports, by which route consignments of Canadian products do occasionally arrive. Whenever possible, however, advantage should be taken of the 'Leyland' and 'Thomson' steamers—two lines running direct from Montreal to Hull and other ports on the northeast coast of England.

It is also worthy of mention that a variety of ingredients are used in Hull for the making of cattle-feeding cakes which Canada can well supply, such as bran, sharps, middlings, low-class flour, husk wheat screenings, all of which, however, should be delivered at a price which will enable them to be advantageously used by manufacturers in this trade.

CANADIAN CANNED FRUIT AGENCIES.

Some influential firms of produce distributors in this district have recently put themselves into communication with this office with a view to securing the buying or selling agency of Canadian firms exporting canned fruit. What is principally required in this line is canned apples put up in tins holding one gallon, but, at the same time, it may be said that almost any kind of canned fruit could, with little difficulty, secure a ready sale in supplying the demands of the restaurants and other trades.

GERMAN DEMAND FOR CANADIAN HONEY.

There appears to be no reason why Canadian honey should not enjoy a larger sale on the British market than it does at the present time. From such countries as Jamaica and Australia, considerable quantities of this product arrive; in fact, only recently a large consignment of 444 barrels weighing close upon 40 tons was imported into this district from Chili. The largest honey buyers in this country are undoubtedly those firms engaged in the manufacture of patent medicines, sweetmeats and confectionery goods. At the same time, however, it should also be of interest to those dealers in Canada who may be inclined to open up the trade to know that large quantities of honey are used in the lager beer industry in Germany. Indeed, manufacturers in that country are said to be keen competitors with local buyers for the supplies that reach English ports. When imported in anything like large quantities, this commodity is generally sent in barrels holding from $1\frac{1}{2}$ to 6 cwt. Canadian exporters, however, would do well to remember that as there are so many sources of supply, it is necessary to always forward samples when submitting prices to English buyers.

AGENCIES FOR CANADIAN GOODS.

As a result of the interest which is now being manifested in this district in all things appertaining to Canada and Canadian progress, many local merchants and commission agents have put themselves into communication with this office with a view to securing agencies for the sale of Canadian produce and manufactures. Quite a variety of goods are represented by these applications. Some firms, for instance, who deal in engineering supplies, have expressed a desire to handle Canadian-made hand-pumps, wood-working machinery, foundry equipment and other tools and appliances of a miscellaneous character. Then again, inquiries have also been made for the agency for flour, canned goods and produce in general; also for domestic specialties (chiefly hardware) and other goods of a marketable nature made in the Dominion. To those Canadian firms desirous of opening up trade with this thickly-populated district, these applications could be put to advantage as a medium for introducing their goods.

SAMPLES NECESSARY TO TRADE.

It would appear that some exporters in Canada have not yet thoroughly appreciated the importance of sending samples of their wares to prospective buyers on this side before they can successfully establish trade relations with them. Instances could be given where some shippers have been working under the impression that trade can at once be opened up simply by quoting f.o.b. or c.i.f. prices for shipments, anticipating that the importer would reply with instructions to have the goods sent forward. Seldom is it the case, however, that an importer will trouble to reply to correspondence without a sample from which he can be enabled to form an opinion as to the value of the goods offered.

It must also be remembered that competition with other sources of supply is becoming keener every month, especially with those countries which have the advantage of close proximity and frequent steamship sailings to English ports. This fact is appreciated to its full value by foreign shippers and if Canadian exporters are to hold their own in the increasingly keen competition the importance of the sample no less than that of the price of the goods will at once be realized as an indispensable precedent to business.

JNO. B. JACKSON.

BIRMINGHAM.

REPORT OF TRADE COMMISSIONER.

(Mr. P. B. Ball.)

39 AND 40 CENTRAL HOUSE, CHRISTCHURCH BUILDINGS,
BIRMINGHAM, ENG., April 6, 1908.

SUPPLY AND DEMAND OF ALUMINIUM.

In view of the many inquiries received at this office from Canada with regard to aluminium I have collected the following facts for publication.

The following table gives the figures for production and price of aluminium for the period of 1897-1907. The prices are the average of those quoted by the British Aluminium Company for 98-99 per cent ingot metal in one-ton lots.

Year.	Estimated Production in Tons.	Price.
1897..	3,327	£155
1898..	3,953	148 Average
1899..	5,459	
1900..	7,192	
1901..	7,420	
1902..	7,750	120 Average
1903..	8,102	
1904..	8,550	
1905..	9,000	
1906..	12,000	200
1907..	19,000	167

As regards demand, the high prices quoted for aluminium and its alloys during the first half of 1907 undoubtedly curtailed its use, while the depressed condition of the motor-car industry further reduced the consumption of this metal. The price reductions which have been announced since July, 1907, have, however, opened up new outlets for aluminium and some of its alloys, and the year closed with a satisfactory and increased demand, especially for electrical purposes. The older works are, it is believed, still producing the metal to the full limit of their capacity.

MANUFACTURES AND OUTPUTS.

The British Aluminium Company has works operating at Foyers, Kinlochleven and Stangford, Norway, while others are in course of erection at Loch Leven and Orsieres, Switzerland. The share capital of the company was increased from £700,000 to £1,300,000 in February, 1907, in order to provide further funds for the large water power development schemes now in hand. The estimated output of aluminium by this company in 1907 was 1,500 tons. This total will be largely increased in 1908, owing to the operation of the new works at Stangford and Kinlochleven. The Aluminum Industrie Aktien-Gesellschaft has three works in operation at Neuhausen, Rheinfelden and Lend Gastein. It has also works in course of construction at Navigense, Switzerland. It is the oldest of the European companies manufacturing aluminium. The estimated output of aluminium by this company in 1907 was 4,500 tons.

AMERICAN ALUMINIUM PLANTS.

The Pittsburg Reduction Company has works in operation at Niagara Falls and Shawenegan Falls, and also at Massena. The name of this company was changed in 1907 to the Aluminium Company of America, and its output in 1907 was 8,000 tons.

Other companies are the Societe Electrometallurgique Francaise, and they have works at Froges, La Praz and St. Michel, and the Campagnie des Produits Chimiques d'Alais et de la Carmargue. The estimated output of aluminium by these works in 1907 was 5,000 tons. A new company is the Aluminium Corporation which has two works in progress at Wallsend-on-Tyne and Dolgarrog, North Wales. The company was floated last year with a capital of £500,000. Another flotation of last year is the Anglo-Norwegian Aluminium Company with works in progress at Vigeland Falls, Norway, and a capital of £110,000. In addition to the works already named, a company with headquarters in Rome, is promoting the manufacture of aluminium in Italy, and works situated near Bussi, in the valley of Pescara, are believed to be now in operation. No details of the capital or output of this company are available.

NO REDUCTION IN COST OF MANUFACTURE.

It is evident that under the new conditions obtaining in the industry, namely, lapsed patents and unrestricted competition, a large output may be anticipated. It has been estimated by competent authorities that aluminium can be manufactured by the electrolytic method now in general use at a cost of $10\frac{1}{2}$ d. or 21 cents per lb., and therefore a small margin of profit exists even at the present low selling prices of the metal and its alloys. No marked reduction, it is said, in the cost of manufacture is likely to occur, until some cheaper material than refined alumina is used in the electrolytic baths.
